## TABLE OF CONTENTS

|                                                                                                                                              |            |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1. Introduction.....</b>                                                                                                                  | <b>1-1</b> |
| 1.1. Overview and Background .....                                                                                                           | 1-1        |
| 1.2. Programmatic Approach and Tiering.....                                                                                                  | 1-3        |
| 1.3. Project Regions and Description of the Proposed Action Area .....                                                                       | 1-5        |
| 1.4. Purpose and Need for the Proposed Action .....                                                                                          | 1-6        |
| 1.5. Federal Agency Participation.....                                                                                                       | 1-8        |
| 1.5.1. Lead Agency .....                                                                                                                     | 1-8        |
| 1.5.2. Cooperating Agencies .....                                                                                                            | 1-8        |
| 1.5.3. Consulting Parties .....                                                                                                              | 1-8        |
| 1.6. Cultural Resources Consultation.....                                                                                                    | 1-9        |
| 1.7. The NEPA Process and Public Involvement .....                                                                                           | 1-9        |
| 1.7.1. Public Involvement .....                                                                                                              | 1-9        |
| 1.7.2. Scoping .....                                                                                                                         | 1-9        |
| 1.7.3. Public Comment on the Draft PEIS .....                                                                                                | 1-10       |
| 1.8. Overview of Relevant Federal Laws and Executive Orders .....                                                                            | 1-11       |
| 1.8.1. National Environmental Policy Act .....                                                                                               | 1-11       |
| 1.8.2. National Historic Preservation Act .....                                                                                              | 1-12       |
| 1.8.3. Endangered Species Act .....                                                                                                          | 1-13       |
| 1.8.4. Magnuson-Stevens Fishery Conservation and Management Act .....                                                                        | 1-13       |
| 1.8.5. Marine Mammal Protection Act .....                                                                                                    | 1-14       |
| 1.8.6. Migratory Bird Treaty Act .....                                                                                                       | 1-14       |
| 1.8.7. Clean Water Act.....                                                                                                                  | 1-14       |
| 1.8.8. Coastal Zone Management Act.....                                                                                                      | 1-15       |
| 1.8.9. Occupational Safety and Health Act.....                                                                                               | 1-15       |
| 1.8.10. Executive Order 11988 (as Amended by EO 13690) – Floodplain<br>Management.....                                                       | 1-16       |
| 1.8.11. Executive Order 11990 – Protection of Wetlands .....                                                                                 | 1-16       |
| 1.8.12. Executive Order 12898 – Federal Actions to Address Environmental<br>Justice in Minority Populations and Low-Income Populations ..... | 1-17       |
| 1.8.13. Executive Order 13186 – Responsibilities of Federal Agencies to<br>Protect Migratory Birds .....                                     | 1-17       |
| 1.8.14. Executive Order 13693 – Planning for Federal Sustainability in the<br>Next Decade.....                                               | 1-18       |
| 1.9. PEIS Organization .....                                                                                                                 | 1-18       |
| 1.10. References.....                                                                                                                        | 1-19       |

|           |                                                                               |            |
|-----------|-------------------------------------------------------------------------------|------------|
| <b>2.</b> | <b>Description of the Proposed Action and Alternatives .....</b>              | <b>2-1</b> |
| 2.1.      | Proposed Action.....                                                          | 2-1        |
| 2.1.1.    | Characteristics of the NPSBN.....                                             | 2-2        |
| 2.1.2.    | Proposed Action Infrastructure.....                                           | 2-2        |
| 2.2.      | Description of Alternatives.....                                              | 2-5        |
| 2.2.1.    | Preferred Alternative.....                                                    | 2-6        |
| 2.2.2.    | Deployable Technologies Alternative.....                                      | 2-6        |
| 2.2.3.    | No Action Alternative.....                                                    | 2-6        |
| 2.3.      | Alternatives Considered but not Carried Forward.....                          | 2-7        |
| 2.3.1.    | New Construction Only Alternative .....                                       | 2-7        |
| 2.3.2.    | New Satellite Alternative.....                                                | 2-7        |
| 2.3.3.    | Collocation-Only Alternative.....                                             | 2-7        |
| 2.4.      | Radio Frequency Emissions.....                                                | 2-7        |
| 2.4.1.    | Introduction.....                                                             | 2-7        |
| 2.4.2.    | RF Emissions and Humans .....                                                 | 2-10       |
| 2.4.3.    | RF Emissions and Non-Human Species .....                                      | 2-18       |
| 2.4.4.    | Summary.....                                                                  | 2-21       |
| 2.5.      | References.....                                                               | 2-22       |

## 10. CUMULATIVE EFFECTS

National Environmental Policy Act (NEPA) regulations (*40 CFR §§ 1500-1508*), as issued by the Council on Environmental Quality, require addressing the incremental impact of a federal agency's action (in this case, FirstNet's Proposed Action) when added to other past, present, and reasonably foreseeable future actions no matter which agency (federal or non-federal) or person undertakes such other actions. These incremental impacts are referred to as cumulative impacts. Cumulative impacts can result from individually minor, but collectively significant, actions taking place over a period of time by various agencies or individuals (*40 CFR § 1508.7*).

The scope of the cumulative effects analysis involves both the geographic extent of the effects and the timeframe in which the effects could be expected to occur, as well as a description of what resources could potentially be cumulatively affected. When applying the concept of cumulative impacts to a programmatic analysis such as this Final Programmatic Environmental Impact Statement (Final PEIS), additional consideration must be given to existing uncertainty associated with specific project locations that will be selected in the future. The design, construction, and operation of the Nationwide Public Safety Broadband Network (NPSBN) would occur throughout the non-contiguous region of the United States, and specific project sites have not yet been identified. Furthermore, there is currently a wide range of technologies that FirstNet and/or their partners may use to implement and deploy the NPSBN, ranging from new and existing fixed assets to mobile, deployable infrastructure. The range of technologies to be implemented and/or deployed for the NPSBN would consist of individual components at specific locations that are relatively small in size, would likely result in being fairly dispersed in their distribution, and would cover large geographies to achieve the connectivity of the program. As such, it is not possible to quantify the cumulative effects of these projects when combined with other potential projects. Therefore, this Final PEIS addresses cumulative impacts qualitatively.

A cumulative impact results from the additive effect of all projects in the same geographical area. Generally, an impact can be considered cumulative if: 1) effects of several actions occur in the same location, 2) effects on a particular resource are the same in nature, and 3) effects are long-term in nature. The common key factor to cumulative assessment is identifying any potential temporally and/or spatially overlapping or successive effects that may significantly affect resources occurring in the analysis areas (*CEQ 1997; USEPA 1999*).

In evaluating the cumulative impacts of an action, an agency considers the total effects on a resource, ecosystem, or human community of that action and all other activities affecting that resource, no matter what entity (federal, non-federal, or private) is taking the action. Cumulative impacts involve the combined, incremental effects of human activity (*USEPA 1999*). In accordance with NEPA and to the extent reasonable and practical, this Final PEIS considers the combined effects of the No Action Alternative, Preferred Alternative, and Deployable Technologies Alternative at the programmatic level with other past, present, and reasonably foreseeable actions that may affect the resources identified.

The geographic extent of the Proposed Action considered for the cumulative impact analysis includes the area under the jurisdiction of the FirstNet program, specifically the non-contiguous region that is the subject of this Final PEIS. The timeframe considered for this analysis is 50 years.

At the programmatic level, it is not practical to include a list of all possible infrastructure projects in the non-contiguous region. Instead, this cumulative impacts analysis describes projects similar to the Proposed Action with common potential impacts that could have additive effects. States and territories within the non-contiguous region have continued to develop their broadband infrastructure in recent years, with several having completed projects funded through the Broadband Technology Opportunities Program (*BroadbandUSA 2015*). Additional broadband infrastructure projects are underway or have been proposed. Examples of such projects are provided in Table 10-1 below.

**Table 10-1: Additional Broadband Infrastructure Projects**

| Name                                                            | Location       | Sponsor                                                                                                                                                                     | Brief Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Completion Year        |

| Public Safety Interoperable Communications (PSIC) Grant Program | Nationwide     | Department of Commerce (DOC) National Telecommunications and Information Agency (NTIA) and Department of Homeland Security (DHS) Federal Emergency Management Agency (FEMA) | \$1 billion grant program to U.S. states and territories for the acquisition of, deployment of, or training for the use of interoperable communications systems that use (or enable interoperability with communications systems that use) reallocated public safety spectrum in the 764-776 megahertz (MHz) and 794-806 MHz bands. Grants were awarded for 6,750 projects, including the installation of 133 new freestanding and 11 new guyed towers, collocation of equipment at 2,710 existing towers and 2,710 existing facilities, 112.9 miles of fiber optic cable, more than 350 training events, and acquisition of over 75,000 radios. ( <i>NITA 2016</i> ) | Concluded in 2012      |
| TERRA                                                           | Alaska         | General Communication, Inc.                                                                                                                                                 | Development of a broadband communications network across the state, including remote regions. Projects have been completed in the Southwest and more recently in the Northwest Arctic with additional construction in 2014 in the Northwest and along the Yukon River ( <i>CGI 2015</i> ).                                                                                                                                                                                                                                                                                                                                                                            | 2011-2014              |
| Broadband Linking the American Samoa Territory (BLAST) Project  | American Samoa | American Samoa TeleCommunications Authority                                                                                                                                 | The BLAST project includes build-out of a land-based fiber network combined with a 350 kilometers interisland submarine cable network connecting Fogagogo, Tu'tuila, Ofu, Luma, Ta'u and Aunu'u Islands ( <i>WFN Strategies 2016</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                               | Largely completed 2015 |
| Gigabit Island Plan                                             | Puerto Rico    | Puerto Rico Broadband Taskforce (a public-private partnership)                                                                                                              | Establishes strategic goals to further expand high speed broadband networks island-wide across Puerto Rico, involving new infrastructure as a component ( <i>PRBT 2015</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 2020                   |

| Measuring Broadband Hawaii | Hawaii   | State of Hawaii Department of Commerce and Consumer Affairs (DCCA) | In collaboration with the Federal Communications Commission's (FCC) Measuring Broadband America, the goal of this project is to "better inform Hawaii consumers about their Internet service performance and to collect broadband performance data that DCCA can use in its efforts to improve access to broadband service across the State." DCCA activities include supporting public-private efforts to develop broadband infrastructure. (DCCA 2016) | Ongoing         |

The analysis herein considered the alternatives discussed in Chapter 2, Description of the Proposed Action and Alternatives, and other programmatic-scale actions. Cumulative effects analysis of individual projects and other past, present, and reasonably foreseeable future actions relevant at the local level can be addressed as part of future project-specific NEPA reviews. Project-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work.

The potential impacts associated with the Proposed Action would result from the collocation on existing infrastructure; construction of new infrastructure and/or accessory components; use of existing fiber facilities; installation of new conduit; deployment of satellite phones and/or satellite technology; installation of microwave facilities; and utilization of deployable technologies. As described in Chapters 3 through 9, the effects as a result of the Proposed Action would not result in potentially significant impacts at the programmatic level based on the impact significance criteria and ratings presented in this Final PEIS. Impacts could occur as a result of other ongoing telecommunications infrastructure development, including those projects described above as well as others in the future; however, when combined with the potential impacts associated with the Proposed Action, incremental impacts to the natural and human environment<sup>1</sup> are not expected to be significant at the programmatic level. The project types that involve new construction and/or ground-disturbing activities would tend to be limited by their nature in the extent and duration of their effects, and these projects would typically implement appropriate best management practices and/or mitigation measures to further reduce the already limited potential impacts. Similarly, effects associated with project operations are not expected to be significant at the programmatic level. Taken together, these projects are not expected to result in significant incremental cumulative impacts to either human health or the environment.

<sup>1</sup> The human environment is the natural and physical (e.g., structures) environment, and the association of people and their activities to those environments.

## 11. BMPS AND MITIGATION MEASURES

This chapter provides examples of best management practices (BMPs) and mitigation measures that FirstNet and/or their partners would recommend or require to be implemented during deployment and operation of the Proposed Action to help avoid or minimize potential impacts to various resources, or potential impacts to deployed infrastructure from various hazards. Specifically, FirstNet and/or their partners would be required to implement mitigation measures, as defined through permitting and/or consultation with appropriate resource agencies. Unlike mitigation measures, however, BMPs would not necessarily be required in every project activity but would be applied as practicable or feasible during deployment and operation of the Proposed Action. The BMPs and mitigation measures outlined in this chapter have been developed based on initial consultation with other agencies as well as through independent research conducted by FirstNet and their environmental contractors. It is possible that other or additional site-specific BMPs and mitigation measures not included in this chapter may be recommended or required to be implemented as a result of consultation with resource agencies, permits, and/or additional environmental reviews.<sup>1</sup> The example BMPs and mitigation measures in this chapter are organized by resource area and, where applicable, each of the following project types:<sup>2</sup>

- Wired Projects
  - New Build – Buried Fiber Optic Plant
  - Use of Existing Conduit – New Buried Fiber Optic Plant
  - New Build – Aerial Fiber Optic Plant
  - Collocation on Existing Aerial Fiber Optic Plant
  - Use of Existing Buried or Aerial Fiber Optic Plant or Existing Submarine Cable
  - New Build – Submarine Fiber Optic Plant
  - Installation of Optical Transmission or Centralized Transmission Equipment
- Wireless Projects
  - New Wireless Communication Towers
  - Collocation on Existing Wireless Tower, Structure, or Building
- Deployable Technologies
  - Cell on Wheels; Cell on Light Truck; System on Wheels
  - Deployable Aerial Communications Architecture

---

<sup>1</sup> Site-specific analysis or environmental reviews may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work.

<sup>2</sup> The resource areas are ordered in this chapter consistent with how they appear in each of the state/territory-specific chapters (Chapters 3 through 9). Additional information and details regarding the Proposed Action infrastructure and project types can be found in Section 2.1.2, Proposed Action Infrastructure, and each respective section within the state/territory chapters.

- Satellites and Other Technologies
  - Satellite-Enabled Devices and Equipment
  - Deployment of Satellites

## **11.1. INFRASTRUCTURE**

### **11.1.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to infrastructure. The following BMPs and mitigation measures would apply to all project types:

- Follow all applicable federal, state/territory, and local requirements for construction on or near public roads.
- Follow all applicable federal, state/territory, and local laws concerning traffic speed and safety during the transport of equipment.
- Schedule deployment activities outside of peak traffic hours.
- Avoid roads with heavy traffic volumes and peak travel hours, to the extent possible, when scheduling the transport of heavy equipment or construction materials.
- Design staging areas to minimize unnecessary equipment and material mobilizations.
- Repave and restore disturbed roads and public road rights-of-way (ROWs), applicable to federal, state/territory, and local laws, as quickly as possible to avoid any traffic impediments that may potentially hinder access to local health, public safety, and emergency facilities, and so traffic capacity and safety conditions could return to their pre-construction condition.
- Design new deployment activities within existing ROWs to the extent possible and outside of roadways and thoroughfares to minimize potential impacts on traffic flow or safety.
- Coordinate with federal, state/territory, and local government agencies as appropriate, as well as with public safety officials, emergency and medical facilities, and existing telecommunications providers to the extent practicable to facilitate awareness of deployment activities and accompanying schedule.
- Schedule new construction outside of seasons known to cause more accidents (e.g., tsunami/hurricane/tropical cyclone season or times of the year when wildfires are more likely to occur) so that potential service disruptions are less likely to coincide with times of increased demand.
- Confirm or otherwise install detection systems so that if and when a disruption to utility services or telecommunications systems occurs, it can be identified and repaired quickly.
- Implement a backup telecommunications system, as needed, which allows first responders to communicate with each other and the public during deployment activities until the new nationwide public safety broadband network (NPSBN) has been successfully implemented.

- Complete deployment activities as quickly and safely as possible to avoid any possible disruptions to utility services.
- Complete those deployment activities that could interrupt power during non-peak times for power or water.
- Follow all applicable state/territory and local one-call laws and procedures for buildouts.
- Follow all applicable federal, state/territory, or local requirements regarding utilities (water, sewer, power, and electricity) and construction within a utility ROW.

### **11.1.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## **11.2. SOILS**

### **11.2.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to soil resources. The following BMPs and mitigation measures would apply to all project types:

- Follow all applicable federal, state/territory, and local requirements for soil erosion and sedimentation control and permitting to avoid or minimize erosion and sedimentation and restore disturbed soil.
- Avoid construction in areas with steep or unstable slopes or with soils known to be particularly susceptible to soil erosion, (see Affected Environment Soils sections) and construct facilities in alternate locations to avoid these areas, if practical.
- Develop a soil erosion and sedimentation control plan for disturbed areas, and use silt fences,<sup>3</sup> erosion control blankets,<sup>4</sup> retention ponds, straw and sandbag barriers, and/or other controls as needed to reduce soil erosion, storm water runoff, and sedimentation.
- Schedule construction activities to avoid, to the extent possible, soil disturbance activities during periods or months with heavy rainfall and snowmelt.<sup>5</sup>
- Cover exposed areas with tarps or similar materials to prevent rainfall exposure to the extent possible.
- Minimize the area of bare soil exposed at any one time as much as possible by constructing in stages.

---

<sup>3</sup> Silt fences are designed to trap sediment in the area where construction or soil disturbance is taking place to minimize or avoid soil erosion and sedimentation. The fence is typically 2- to 3-feet tall, buried 8 to 12 inches into the soil, and secured with stakes.

<sup>4</sup> Erosion control blankets are biodegradable or synthetic sheet-like materials that are rolled out onto disturbed areas to protect soil from wind and water erosion.

<sup>5</sup> See Affected Environment Climate Change sections for an explanation of seasonal climate and weather patterns.

- Revegetate disturbed areas with native plants, to the extent practicable, as progressively and quickly as practicable to achieve stabilization.<sup>6</sup>
- Minimize soil disturbance to the extent practicable, especially in wetland and designated natural resource areas.
- Maintain topsoil by segregating topsoil or surface soil from subsurface layers and implementing temporary topsoil storage areas during construction.<sup>7</sup>
- Replace topsoil as soon as possible following construction.
- Remove and store topsoil with a woven weed barrier or similar material for post-construction site restoration for areas.
- Pay particular attention to areas identified as having soils that are vulnerable to compaction (see Affected Environment Soils sections) and select alternate locations to construct facilities if practical.
- Implement deep tillage procedures where practical to loosen compacted soils.
- Restore soil surface to original or improved contours.
- Use timber mats or similar infrastructure as deemed necessary to distribute vehicle and heavy equipment weight.
- Use existing roads or previously disturbed areas to the maximum extent practicable.

### **11.2.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures for soils beyond those listed above for all project types.

## **11.3. GEOLOGY**

### **11.3.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to geologic resources or potential impacts to the Proposed Action as a result of geologic hazards. The following BMPs and mitigation measures would apply to all project types:

- Avoid, to the extent practicable, deployment in areas that undergo significant geomorphological changes, such as within active glacial valleys (in Alaska) or streams and rivers.

---

<sup>6</sup> Plant roots play a significant role in stabilizing soils. Seeding disturbed areas quickly after construction activities would allow for faster plant and root development and would therefore provide better erosion protection.

<sup>7</sup> Topsoil is segregated from subsoil layers by stripping the uppermost soil from the area being excavated and storing it separately from the subsurface soil. Once construction is completed, the topsoil is replaced as the uppermost soil unit.

- Avoid construction in seismically active areas, locations with karst topography or that have shown recent subsidence, or steep or unstable slopes that are susceptible to erosion; construct facilities in alternate locations if practical.
- Construct all infrastructure to standards that meet or exceed state/territory seismic requirements.
- Avoid rock ripping to the extent practicable to preserve bedrock resources, topography, and physiography.
- Minimize the area/volume of disturbed/removed terrain during deployment/construction.
- Restore topographic features and grades to pre-construction/deployment conditions.
- Limit construction to areas that are not actively mined or undergoing mineral or other material or petroleum extraction activities, or coordinate planning and deployment with mining and extraction plans and activities in active areas.
- Follow all relevant federal, state/territory, and local laws and regulations as they apply to paleontological, mineral, and fossil fuel resources.
- Develop a Paleontological Monitoring and Mitigation Plan outlining areas with high likelihood for encountering significant fossil resources and plans for avoidance and appropriate response if previously unknown resources are encountered.
- Avoid areas with significant fossil resources, if practicable.
- Suspend all work if paleontological resources are encountered on a project construction site until a certified paleontologist has been brought on-site to oversee project activities and ensure that fossil resources are handled properly.
- Locate construction/deployment activities outside of high risk seismic hazard zones, active faults, and away from low coastal areas that could potentially be impacted from tsunamis.
- Follow all applicable federal, state/territory, and local requirements for construction codes, seismic criteria, and geotechnical designs, and construct/deploy all infrastructure to standards that meet or exceed state/territory seismic requirements.
- Design and deploy resilient infrastructure to withstand earthquakes typical to the region.
- Locate construction/deployment activities outside of high-risk volcanic hazard zones.
- Locate construction/deployment activities away from steep slopes with unconsolidated material and other areas prone to landslides, to the extent practicable.
- Locate construction/deployment activities outside of areas identified as having karst topography, loosely compacted soils, and low density sediments prone to subsidence or compaction, to the extent practicable.
- Consider alternate methods to trenching for placement of fiber optic cable and transmission lines in sensitive areas.

### **11.3.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures for geology beyond those listed above for all project types.

## **11.4. WATER RESOURCES**

### **11.4.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to water resources. The following BMPs and mitigation measures would apply to all project types:

- Minimize ground disturbance in or near waterbodies during construction, as practicable, particularly in areas prone to erosion.
- Follow all applicable federal, state/territory, and local requirements for soil erosion and sedimentation control and permitting to avoid or minimize inputs of eroded materials into waterbodies.
- Develop a storm water pollution prevention plan.
- Include engineered or site-designed methods to control storm water.
- Include any forested riparian areas along the stream in the length of the bore to minimize impacts to forested habitat when using directional bores to cross a stream.
- Ensure the cleared width through any forested area is the minimum needed to install the line; the width should be no more than 20 feet wide through the forested area to allow the canopy to close over the line.
- Restore disturbed stream banks using bioengineering bank stabilization methods and revegetate disturbed banks with native trees, shrubs, and herbaceous plants.
- Restore stream bank slopes after project completion to stable-slope steepness (not steeper than 2:1).
- Use graded stone or riprap to protect the section of trench below the normal water level from scour or erosion if using directional boring under a stream. Any stone or riprap fill in the streambed must not be placed above the existing streambed elevation to avoid creating a fish passage obstruction. As an alternative to using stone or riprap, allow sufficient separation distance between the directional boring and the stream bottom to minimize the potential for scour or erosion to affect the installed line.

- Implement storm water reduction methods for large-scale construction activities, including minimizing impervious surfaces, using porous materials, or collecting and reusing storm water (e.g., extended detention ponds, storm water wetlands, filtration structures,<sup>8</sup> and infiltration [or recharge] basins).<sup>9</sup>
- Direct water to storm water drains for large-scale construction activities or to constructed bioretention areas,<sup>10</sup> rain gardens, or other storage and retention areas designed to slow water and allow sediments to settle out.
- Stabilize and revegetate disturbed areas as progressively and quickly as practicable to achieve stabilization and minimize the potential for erosion.
- Avoid construction of roads and other impervious surfaces in floodplain areas to the extent practicable; where necessary in floodplains, construct roads and other impervious surfaces level with existing grades, as practicable, to not change or restrict water flow.
- Station all deployables and aboveground structures outside of floodplains, to the extent practicable; if deployables or aboveground structures must be placed in floodplains, station them such that they are not vulnerable to be damaged by flood flows and do not themselves impede or restrict flood flows, as practicable.
- Restore native vegetation/wetlands to stabilize stream banks and stop erosion.
- Minimize the use of riprap and the use of alternative erosion protection materials whenever possible.
- Place only enough riprap to provide stream bank toe protection, such as from the toe of the bank, where riprap must be used. Consider using bioengineered bank stabilization methods instead of riprap.
- Meet state/territory or local regulations for development proposed in a floodway or floodplain.
- Avoid construction, where feasible, in areas with steep or unstable slopes with soils known to be particularly susceptible to soil erosion and construct facilities in alternate locations if practical.
- Develop a soil erosion and sedimentation control plan for disturbed areas, and implement BMPs, as appropriate, including the use of silt fences, erosion control blankets, progressive revegetation, and other controls as needed to reduce soil erosion, storm water runoff, and sedimentation.

---

<sup>8</sup> Storm water filtration structures use a filtering media (sand, soil, gravel, peat, or compost) in storm water filtration structures to remove pollutants from storm water runoff.

<sup>9</sup> Infiltration basins (also known as recharge basins) are considered a treatment BMP because they can remove pollutants from surface discharges by capturing the storm water runoff volume (typically, larger volumes than an infiltration trench) and infiltrating it directly to the soil rather than discharging it to an aboveground drainage system.

<sup>10</sup> Bioretention is a structural storm water control measure that captures and temporarily stores storm water runoff using soils and vegetation in shallow basins or landscaped areas to provide enhanced removal of dissolved storm water pollutants, including nutrients, pesticides, organics, metals, and biological constituents.

- Seed and protect disturbed stream banks that are 3:1 or steeper with heavy-duty, net-free biodegradable erosion control blankets to minimize the entrapment and snaring of small wildlife such as snakes and turtles (follow manufacturer's recommendation for installation); seed and apply mulch on all other disturbed areas.
- Use weed-free erosion control mechanisms (such as straw wattles or straw or hay bales).
- Avoid construction activities (especially activities resulting in soil disturbance), to the extent possible, during rainy or snowmelt seasons when streamflow, rainfall, and runoff are highest.
- Minimize the total area of bare soil exposed at any one time as much as possible by constructing in stages.
- Minimize clearing of riparian and streamside vegetation, including trees, as practicable.
- Establish and clearly mark all waterbody buffers in the field with signs or highly visible flagging until construction-related ground disturbing activities are complete.
- Stabilize and revegetate disturbed areas as progressively and quickly as practicable to achieve stabilization.
- Monitor site restoration following ground disturbance activities, as required by law or permit; implement contingency measures if site restoration should fail and soil erosion occurs.
- Retain vegetative buffers, wherever possible, to prevent runoff into waterbodies.
- Revegetate all bare and disturbed areas along stream banks or shorelines with a mixture of grasses (excluding all varieties of tall fescue), legumes, and native shrub and hardwood tree species as soon as possible upon completion.
- Minimize in-stream work to the extent practicable, and when working in streams, restore streambeds and banks to original contours.
- Construct all stream crossings (roads and trenching) as close as perpendicular to the axis of the waterbody channel as engineering and routing conditions permit.
- Use standard upland construction techniques when crossing waterbodies when they are dry or frozen and not flowing or as required by permit or law, provided that it is not likely for flow to resume during construction and prior to post-construction stabilization.
- Route the stream crossing to minimize the number of waterbody crossings where waterbodies meander or have multiple channels, as practicable.
- Prepare a Spill Prevention, Control, and Countermeasure (SPCC) Plan to prevent, contain, and report accidental spills.
- Inspect and maintain tanks and equipment containing oil, fuel, or chemicals for drips or leaks to prevent spills to the ground or directly into waterbodies.
- Maintain and repair all equipment and vehicles on impervious surfaces, as practicable, away from all sources of surface water.

- Park vehicles at least 50 feet from any stream or wetland unless authorized by a permit or on an existing roadway, as practicable.
- Deposit and stabilize all excavated material not reused in an upland area outside of floodplains and streams.
- Design any structures located in floodplains, as feasible, with structural hardening to withstand flooding and to not increase the risk of flooding for other areas of the floodplain.
- Space and size culverts properly.
- Stabilize approaches to streams and stream crossings with clean rock or steel plates during construction to minimize erosion and sedimentation, as practicable.
- Place materials storage and staging areas outside of waterways and floodplain.
- Maintain adequate waterbody flow rates to protect aquatic life and prevent the interruption of existing downstream users, as practicable, if conducting in-stream construction (trenching or roads if necessary) during times that streams have flow.

#### **11.4.2. Project-Type Specific BMPs and Mitigation Measures**

The following project-specific BMPs and mitigation measures apply to Wired Projects in addition to those listed above for all project types:

- Wireless Projects
  - New Wireless Communication Towers
    - Do not permit underwater blasting and pile driving activities in any waterbody.

### **11.5. WETLANDS**

#### **11.5.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to wetlands. The following BMPs and mitigation measures would apply to all project types:

- Follow all BMPs and mitigation measures related to minimizing soil erosion, sedimentation, and soil compaction presented in Section 11.2, Soils.
- Develop management plans such as, but not limited to, wetland and vegetation management and restoration, water quality protection, and erosion and sediment control plans for the management of wetland habitat, vegetation, water quality, and soils/erosion control.
- Follow any BMPs and mitigation measures for work in or near wetlands developed by state/territory and local agencies, such as state/territory departments of transportation.
- Conduct a detailed baseline study of the wetland to be impacted to aid in restoration of pre-impact condition, including, as appropriate or required by law, a survey of wetland contours; soil texture and profile; plant species, structure, and cover; and hydrology.

- Develop a storm water pollution prevention plan.
- Time construction to outside the breeding and migratory seasons of wetland wildlife when construction is unavoidable.
- Preserve existing tree canopies and natural areas in and around wetlands as much as possible.
- Cut wetland vegetation by hand (chain or hand saw) instead of using large equipment when cutting is unavoidable.
- Use timber mats when working in or near wetlands.
- Use weed-free erosion control mechanisms (such as straw wattles or straw or hay bales).
- Prepare an SPCC Plan to prevent, contain, and report accidental spills.
- Avoid both above and belowground wetland crossings unless necessary.
- Take advantage of already disturbed areas such as easements, roads, roadway shoulders, bridges, or old railroad beds when crossing a wetland is unavoidable.
- Span a wetland by locating telecommunication poles on either side of the wetland instead of disturbing the interior, where practicable or feasible.
- Avoid diversion of surface water and groundwater sources, which could affect nearby wetlands.
- Include engineered or site-designed methods to control storm water.
- Create and maintain buffer zones around wetlands to protect their functions and values.
- Follow all applicable federal, state/territory, and local requirements related to potential wetland impacts and permitting to avoid or minimize potential wetland impacts, compensate for unavoidable impacts to wetlands, and restore impacted wetlands.
- Position deployment activities to avoid wetlands to the greatest extent practicable and to minimize the project footprint while safely and practically implementing the Proposed Action.
- Clearly mark the boundaries of wetland areas to be avoided during construction using flagging, and maintain markers until reclamation is complete (as applicable). Train equipment operators on the activities to avoid within or near wetlands.
- Segregate and salvage all topsoil up to a maximum of 12 inches of topsoil from the area disturbed in dry wetlands, where practicable, and restore topsoil to its approximate original stratum after backfilling is complete.
- Avoid temporarily storing or stockpiling materials in wetland areas or in areas that could alter wetland hydrology (causing damming and flooding) or impede or divert water (causing drying). When unavoidable, place temporary fill on geotextile fabric.
- Minimize vegetation clearing in or near wetlands. If vegetation clearing is required, minimize ground disturbance and maintain low groundcover vegetation, as well as the roots of taller vegetation.

- Install and maintain sediment barriers, as appropriate, at saturated wetlands or wetlands with standing water across the entire construction ROW upslope of the wetland boundary and where saturated wetlands or wetlands with standing water are adjacent to the construction ROW as necessary to prevent sediment flow into the wetland.
- Time construction using heavy equipment to avoid periods of heavy moisture, as appropriate, when construction within wetlands is unavoidable.
- Do not maintain, store, wash, or repair equipment in or near (within 100 feet of) wetland areas to avoid spills or contamination, where practicable. Do not use heavy equipment within wetlands, even temporarily, and do not travel through wetlands, where practicable. Use wide-tracked or low-ground pressure construction equipment and/or conventional equipment operating from the ROW, timber mats, or prefabricated equipment mats. Prohibit storage of hazardous materials, chemicals, fuels, and lubricating oils in wetlands. Use existing access roads whenever possible. Where construction is required, maintain natural drainage patterns to the extent practicable by installing culverts in sufficient number and size to prevent ponding, diversion, or concentrated runoff. Use gravel for road surfaces where possible to avoid an increase in permeable surfaces and use proper drainage structures to minimize sedimentation and erosion to adjacent wetlands.
- Consult local wetland restoration guidance, including communicating with the appropriate local agency, if one exists. Use suggested up-to-date published restoration manuals to ensure that appropriate wetland restoration measures are followed and to increase restoration success.
- Conduct a detailed baseline study of the wetland to be impacted to aid in restoration of pre impact condition, including, as appropriate or required by law, a survey of wetland contours; soil texture and profile; plant species, structure, and cover; and hydrology.
- Stockpile wetland topsoil and sod mats used during facility installation after initial use when working in areas where wetlands would be restored. Use standard reclamation protocol. Re-use the topsoil and sod mats in the post-construction wetland restoration.
- Revegetate, as applicable, bare areas as progressively and quickly as possible (preferably within the same growing season) to stabilize soils, reduce sedimentation, and avoid the spread of invasive species. Install erosion protection and leave in place until the area is revegetated and the soil is stabilized.
- Prohibit use of herbicides or pesticides within 100 feet of any wetland (unless allowed or required by the appropriate land management, tribal, or state/territory agency).
- Conduct post-construction monitoring inspections after the first growing season to determine success of revegetation, as applicable, unless otherwise required by a permit.
- Determine restoration to be successful if the surface condition is similar to adjacent undisturbed communities or found acceptable by the applicable regulatory body.

### 11.5.2. Project-Type Specific BMPs and Mitigation Measures

The following project-specific BMPs and mitigation measures apply to Wired Projects in addition to those listed above for all project types:

- New Build –Buried Fiber Optic Plant
  - Avoid, as appropriate, stockpiling material from directional drilling in a wetland, or where the stockpile could cause sedimentation into a wetland or dam water, causing flooding of a wetland area; avoid, as appropriate, setting up drilling equipment in a wetland.
  - Conduct dewatering in a manner to prevent erosion and to prevent heavily silt-laden water from flowing directly into any wetland or waterbody if dewatering an excavation.
  - Replace topsoil and restore original contours to the greatest extent practicable.
  - Install buried cable along existing road ROWs wherever possible to minimize vegetation clearing and other potential impacts to wetlands.
  - Use structures or devices to prevent subdraining or groundwater movement along new trenched-in buried conduit such as anti-seepage collars, intermittent clay barriers, trench plugs, or clay saddles.
- New Build – Aerial Fiber Optic Plant
  - Coordinate with U.S. Fish and Wildlife Service (USFWS) during site-specific reviews as required to assess whether it may be preferable and less impactful to implement line burial instead of installing lines overhead. However, depending on site conditions, installation of overhead transmission lines along existing road ROWs may minimize vegetation clearing and other potential impacts to some (but not all) wetlands.
- New Build – Submarine Fiber Optic Plant
  - Avoid, as appropriate, stockpiling material from directional drilling in a wetland, or where the stockpile could cause sedimentation into a wetland or dam water, causing flooding of a wetland area; avoid, as appropriate, setting up drilling equipment in a wetland.
  - Conduct dewatering in a manner to prevent erosion and to prevent heavily silt-laden water from flowing directly into any wetland or waterbody if dewatering an excavation.
  - Replace topsoil and restore original contours to the greatest extent practicable.

## 11.6. BIOLOGICAL RESOURCES

### 11.6.1. Terrestrial Vegetation

#### *11.6.1.1. BMPs and Mitigation Measures for All Project Types*

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to terrestrial vegetation. The following BMPs and mitigation measures would apply to all project types:

- Engage in early consultation with appropriate agencies and stakeholders, including but not limited to the USFWS and state/territory agencies.
- Consolidate facilities as much as possible (collocation and use of existing ROWs) to reduce vegetation loss.
- Avoid high-quality habitat.<sup>11</sup>
- Minimize construction of all roads, fences, and other ancillary facilities to reduce overall vegetation loss and habitat fragmentation. Control fugitive dust generated by the use of unpaved roads and construction.
- Limit construction equipment and vehicles to approved roads or ROWs.
- Avoid construction/deployment in areas with sensitive vegetation (i.e., woodlots and wetlands), unique habitat (i.e., shorelines and stream banks), or designated natural resources, if practical.
- Close and revegetate any temporary and unnecessary roads after project completion.
- Segregate topsoil or surface soil from subsurface layers during construction for reuse during post-construction seeding.
- Restore disturbed areas as progressively and quickly as possible to pre-construction use; grade and apply vegetation cover using appropriate and certified seed mixes and seed dispersal, management, and maintenance processes, as applicable.
- Revegetate with native species that approximate pre-disturbance plant community composition.
- Use existing roads and regularly maintained areas when conducting routine maintenance and inspections to the extent feasible.
- Follow all applicable federal, state/territory, and local requirements for vegetation removal, disturbance, and restoration.

---

<sup>11</sup> High-quality habitats contain high plant diversity and low numbers of non-native or invasive plants; are left in a natural state; and have high-quality plants or ones that are very valuable to wildlife. Disturbed habitats generally contain non-native, invasive species and extremely low plant diversity; are under regular maintenance; and consist of low quality or unsuitable habitat. Professional biologists can typically provide a basic assessment of the quality of the site based on one or more site visits. Private consultants can also evaluate habitat quality through a standardized assessment tool, the Floristic Quality Assessment. This assessment provides a quantitative assessment score, rating sites on a scale from 0 to 10 (10 being the highest quality).

- Obtain all appropriate permits and comply with conditions to minimize or avoid impacts to vegetation.
- Minimize or avoid forest removal whenever possible.
- Identify all areas within the proposed construction footprint that contain noxious or invasive plants and use pre-construction treatments such as mowing or herbicide applications (in consultation with appropriate agencies and stakeholders) prior to ground disturbance activities.
- Store soil containing noxious or invasive plants in a location away from clean topsoil and subsoil.
- Inspect and clean all construction equipment and deployable vehicles with high-pressure washing equipment to remove soil and plant matter prior to moving to the next job site or staging location.
- Locate staging areas and construction sites in previously disturbed areas.

#### ***11.6.1.2. Project-Type Specific BMPs and Mitigation Measures***

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

### **11.6.2. Wildlife**

#### ***11.6.2.1. BMPs and Mitigation Measures for All Project Types***

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to wildlife. The following BMPs and mitigation measures would apply to all project types:

- Engage in early consultation with appropriate agencies and stakeholders as necessary, including but not limited to USFWS, the National Marine Fisheries Service (NMFS), and relevant state/territory wildlife and natural resource agencies.
- Give preference to development options that involve use of existing physical infrastructure, and/or that do not involve new aboveground structures (e.g., collocation on existing structures, etc.).
- Minimize vehicular harm of animals migrating between seasonal habitats by locating activities, roads, and infrastructure away from these areas or installing barriers along roadsides.
- Locate project activities, facilities, and roads away from key habitats (e.g., wetlands, cays,<sup>12</sup> and stream sites) for amphibians and reptiles.

---

<sup>12</sup> Cays are small, low-elevation, sandy islands on the surface of a coral reef.

- Control the spread of invasive animals and plants by coordinating mowing schedules and assisting agencies and groups with ROW permits, washing mowers and equipment between sites, and educating staff.
- Consolidate facilities as much as possible (e.g., collocation and use of existing ROWs).
- Avoid known calving/lambing areas in Alaska during critical life stages when undertaking deployment and associated activities (these times vary greatly depending on region, species, and habitat).
- Assess locations of roost sites for bats and timing of critical life stages (e.g., maternity and weaning periods), hibernation for deployment and associated activities (these times vary greatly depending on region, species, and habitat).
- Minimize construction of all roads, fences, and other ancillary facilities to reduce overall habitat fragmentation.
- Instruct all construction employees to avoid harassment and disturbance of wildlife, especially during reproductive (e.g., courtship, lambing/calving, pupping and molting [haulout period], spring/fall migrations) seasons.
- Do not permit pets on site in order to avoid harassment and disturbance of wildlife.
- Report observations of potential wildlife interactions, including wildlife mortality, to the appropriate agency immediately.
- Avoid known marine mammal haulouts or concentration areas as locations for deployment and associated activities.
- Provide for passage of fish and wildlife in new crossings and avoid reducing the efficiency of a structure to allow passage.
- Avoid roads and ROWs that provide access to critical wildlife habitat and near known migration routes (especially terrestrial and semi-aquatic wildlife routes), stopover sites, and large blocks of habitat.
- Assess critical life stages of marine mammals hauled out near locations (1 mile) selected for deployment and associated activities.
- Avoid development in areas that contain high densities of breeding or wintering birds, in high wildlife use areas, migratory staging areas, woodlots, riparian corridors, Audubon Important Bird Areas, nature preserves, state and national parks, state forests, fish and wildlife areas, and other publicly owned properties.
- Reduce habitat fragmentation, minimize the number of new roads constructed, and maximize use of existing corridors, roads, disturbed or developed areas.
- Assess potential noise impacts to migrating whales and local pinnipeds if deployment and activities would occur over sea ice. Control the spread of invasive animals and plants by coordinating mowing schedules, assisting agencies and groups with ROW permits, washing mowers and equipment between sites, and educating staff.

- Develop “good housekeeping” procedures to ensure that sites are kept clean of debris, garbage, and/or waste.
- Follow food and waste management protocols to minimize attractants to proposed network deployment sites.
- Restore habitat in construction zones, staging areas, etc. once construction is complete.
- Follow recommendations outlined by the Avian Power Line Interaction Committee and USFWS (*APLIC 2006*; *APLIC and USFWS 2005*; *APLIC 2012*) for any aboveground lines or cables (e.g., use of diverters and anti-nesting devices).
- Install bat exclusions and/or deterrents on existing and new structures.
- Turn off all unnecessary lighting at night.
- Minimize or avoid the need for or use of specific types of illumination (e.g., sodium vapor lights) at site facilities to reduce attraction of migratory birds.
- Determine during site-specific reviews the feasibility and effectiveness of implementing construction timing windows to avoid or minimize adverse effects to bird nests, eggs, and young birds and implement if practicable or feasible.
- Monopole structures should be considered in place of lattice structures, to the extent practicable or feasible. If lattice structures are to be used, FirstNet and/or their partners would work with the USFWS to incorporate anti-nesting devices into project design, as practicable or feasible.
- Work with USFWS to choose appropriate markers when towers requiring guy wires are necessary. Markers should be regularly maintained for the life of the project.
- Use outdoor security or safety lights, as practicable or feasible, that are motion-triggered, downcast and/or down-shielded, and directed inward whenever possible to prevent “star” effects when viewed offsite during construction/deployment and operation, particularly in coastal areas.
- Use structures containing the fewest perching options in areas where raptors and raven predation of sensitive resources is a concern.
- Use structures and components compatible with the guidance in *APLIC 2006* where raptor electrocution is a concern.
- Follow, as practicable or feasible, the suggested practices by the APLIC to minimize impacts to migratory birds through collision and electrocution.

The following BMPs and mitigation measures are recommended by USFWS, including guidelines on communications tower siting (2012a, 2013b):

“1. Collocation of the communications equipment on an existing communication tower or other structure (e.g., billboard, water and transmission tower, distribution pole, or building mount) is strongly recommended. Depending on tower load factors and communication needs, from 6 to 10 providers should collocate on an existing tower or structure provided that frequencies do not overlap/‘bleed’ or where frequency length or broadcast distance requires higher towers. New towers should be designed structurally and electronically to accommodate the applicant’s antenna, and antennas of at least 2 additional users—ideally 6 to 10 additional users, if possible—unless the design would require the addition of lights and/or guy wires to an otherwise unlit and/or unguyed tower. This recommendation is intended to reduce the number of towers needed in the future.

2. If collocation is not feasible and a new tower or towers are to be constructed, it is strongly recommended that the new tower(s) should be not more than 199 feet above ground level (AGL), and that construction techniques should not require guy wires. Such towers should be unlighted if Federal Aviation Administration (FAA) regulations and lighting standards (*FAA 2007, Patterson 2012, FAA 2013 lighting circular anticipated update* [<sup>13</sup>]) permit. Additionally, the Federal Communications Commission (FCC) through recent rulemaking now requires that new towers > 450 ft AGL contain no red-steady lights. FCC also recommends that new towers 350-450 ft AGL also contain no red-steady lights, and they will eventually recommend that new towers < 350 ft AGL convert non-flashing lights to flash with existing flashing lights. LED lights are being suggested as replacements for all new construction and for retrofits, with the intent of future synchronizing the flashes. Given these dynamics, the Service recommends using lattice tower or monopole structures for all towers < 200 ft AGL and for taller towers where feasible. The Service considers the less than 200 ft AGL option the ‘gold standard’ and suggests that this is the environmentally preferred industry standard for tower placement, construction and operation—i.e., towers that are unlit, unguyed, monopole or lattice, and less than 200 ft AGL.

3. If constructing multiple towers, the cumulative impacts of all the towers to migratory birds—especially to Birds of Conservation Concern (*[US]FWS 2008*) and threatened and endangered species, as well as the impacts of each individual tower, should be considered during the development of a project.

---

<sup>13</sup> Current FAA guidance (*FAA 2016a*) requires lighting for towers greater than 200 feet.

4. The topography of the proposed tower site and surrounding habitat should be clearly noted, especially in regard to surrounding hills, mountains, mountain passes, ridge lines, rivers, lakes, wetlands, and other habitat types used by raptors, Birds of Conservation Concern, and state and federally listed species, and other birds of concern. Active raptor nests, especially those of Bald and Golden Eagles, should be noted, including known or suspected distances from proposed tower sites to nest locations. Nest site locations for Golden Eagles may vary between years, and unoccupied, inactive nests and nest sites may be re-occupied over multiple years. The Service's 2013 Eagle Conservation Plan Guidance, Module 1, Land-based Wind Energy, Version 2, available on our website, is a useful document (*USFWS 2013[a]*).

5. If at all possible, new towers should be sited within existing 'antenna farms' (i.e., clusters of towers), in degraded areas (e.g., strip mines or other heavily industrialized areas), in commercial agricultural lands, in Superfund sites, or other areas where bird habitat is poor or marginal. Towers should not be sited in or near wetlands, other known bird concentration areas (e.g., state of federal refuges, staging areas, rookeries, and Important Bird Areas), in known migratory, daily movement flyways, areas of breeding concentration, in habitat of threatened or endangered species, or key habitats for Birds of Conservation Concern (*[US]FWS 2008*). Disturbance can result in effects to bird populations which may cumulatively affect their survival. The Service has recommended some disturbance-free buffers, e.g., 0.5 mi around raptor nests during the nesting season, and 1-mi disturbance free buffers for Ferruginous Hawks and Bald Eagles during nesting season in Wyoming (*[US]FWS WY Ecological Services Field Office, referenced in Manville 2007:23*). The effects of towers on 'prairie grouse,' 'sage grouse,' and grassland and shrub-steppe bird species should also be considered since tall structures have been shown to result in abandonment of nest site areas and leks, especially for 'prairie grouse' (*Manville 2004*). The issue of buffers is currently under review, especially for Bald and Golden Eagles. Additionally, towers should not be sited in areas with a high incidence of fog, mist, and low cloud ceilings.

6. If taller (> 199 ft AGL) towers requiring lights for aviation safety must be constructed, the minimum amount of pilot warning and obstruction avoidance lighting required by the FAA should be used.<sup>[14]</sup> Unless otherwise required by the FAA, only white strobe or red strobe lights (red preferable since it is generally less displeasing to the human eye at night), or red flashing incandescent lights should be used at night, and these should be the minimum number, minimum intensity (< 2,000 candela), and minimum number of flashes per minute (i.e., longest duration between flashes/'dark phase') allowable by the FAA. The use of solid (non-

---

<sup>14</sup> This guidance (*USFWS 2013b*) was based on earlier FAA guidance that has since been updated. Current FAA guidance (*FAA 2016a*) now requires lighting for towers greater than 200 feet.

flashing) warning lights at night should be avoided (*Patterson 2012, Gehring et al. 2009*)—see recommendation #2 above. Current research indicates that solid red lights attract night-migrating birds at a much higher rate than flashing lights (*Gehring et al. 2009, Manville 2007, 2009*). Recent research indicates that use of white strobe, red strobe, or red flashing lights alone provides significant reductions in bird fatalities (*Patterson 2012, Gehring et al. 2009*).

7. Tower designs using guy wires for support, which are proposed to be located in known raptor or waterbird concentrations areas, daily movement routes, major diurnal migratory bird movement routes, staging areas, or stopover sites, should have daytime visual markers or bird deterrent devices installed on the wires to prevent collisions by these diurnally moving species. The efficacy of bird deterrents on guy wires to alert night migrating species has yet to be scientifically validated. For guidance on markers, see *Avian Power Line Interaction Committee (APLIC). 2006. Suggested Practices for Avian Protection on Power Lines - State of the Art in 2006*. Edison Electric Institute, APLIC, and the California Energy Commission. Washington, DC, and Sacramento, CA. 207 pp, and APLIC. 2012. *Reducing Avian Collisions with Power Lines – the State of the Art in 2012*. Edison Electric Institute and APLIC. Washington, DC. 159 pp. Also see [www.aplic.org](http://www.aplic.org), [www.energy.ca.gov](http://www.energy.ca.gov), or call 202-508-5000.

8. Towers and appendant facilities should be designed, sited, and constructed so as to avoid or minimize habitat loss within and adjacent to the tower ‘footprint.’ However, a larger tower footprint is preferable to the use of guy wires in construction. Several shorter, un-guyed towers are preferable to one, tall guyed, lighted tower. Road access and fencing should be minimized to reduce or prevent habitat fragmentation, disturbance, and the creation of barriers, and to reduce above ground obstacles to birds in flight.

9. If, prior to tower design, siting and construction, if it has been determined that a significant number of breeding, feeding and roosting birds, especially of Birds of Conservation Concern (*[US]FWS 2008*), state or federally-listed bird species, and eagles are known to habitually use the proposed tower construction area, relocation to an alternate site is highly recommended. If this is not an option, seasonal restrictions on construction are advised in order to avoid disturbance, site and nest abandonment, especially during breeding, rearing and other periods of high bird activity.

10. Security lighting for on-ground facilities, equipment and infrastructure should be motion- or heat-sensitive, down-shielded, and of a minimum intensity to reduce nighttime bird attraction and eliminate constant nighttime illumination, but still allow safe nighttime access to the site (*USFWS 2012[b], Manville 2011*).

11. Representatives from the USFWS or researchers from the Research Subcommittee of the Communication Tower Working Group should be allowed access to the site to evaluate bird use; conduct dead-bird searches; place above ground net catchments below the towers (*Manville 2002*); and to perform studies using radar, Global Position System, infrared, thermal imagery, and acoustical monitoring, as necessary. This will allow for assessment and verification of bird movements, site use, avoidance, and mortality. The goal is to acquire information on the impacts of various tower types, sizes, configurations and lighting protocols.

12. Towers no longer in use, not re-licensed by the FCC for use, or determined to be obsolete should be removed from the site within 12 months of cessation of use, preferably sooner.

13. In order to obtain information on the usefulness of these guidelines in preventing bird strikes and better understanding impacts from habitat fragmentation, please advise USFWS personnel of the final location and specifications of the proposed tower, and which measures recommended in these guidelines were implemented. If any of these recommended measures cannot be implemented, please explain why they are not feasible. This will further advise USFWS in identifying any recurring problems with the implementation of the guidelines, which may necessitate future modifications.”

Additional tower lighting BMPs are described in Section 11.6.2.2, Project-Type Specific BMPs and Mitigation Measures.

#### ***11.6.2.2. Project-Type Specific BMPs and Mitigation Measures***

The following project-specific BMPs and mitigation measures apply in addition to those listed above for all project types:

- Deployable Technologies
  - Avoid activities within migratory bird flyways and in the immediate vicinity of bat roosts to the extent practicable.
  - Site towers away from known communal bat use areas and high bird use areas to the extent practicable or feasible.
  - Do not operate aircraft at an altitude that could disturb known natural roosting sites of bats, with the exception only for severe weather conditions.
  - Do not operate aircraft at an altitude lower than 1,500 feet within 0.5 mile of known walrus observed on land or ice, with the exception only for severe weather conditions.

- Wired Projects
  - New Build – Aerial Fiber Optic Plant
    - Follow recommendations outlined by the Avian Power Line Interaction Committee and USFWS (*APLIC 2006; APLIC and USFWS 2005; APLIC 2012*) for any aboveground lines or cables (e.g., use of diverters and anti-nesting devices).
    - Install bat exclusions and/or deterrents on existing and new structures.
  - Use of Existing Buried or Aerial Fiber Optic Plant or Existing Submarine Cable
    - Follow recommendations outlined by the Avian Power Line Interaction Committee and USFWS (*APLIC 2006; APLIC and USFWS 2005; APLIC 2012*) for any aboveground lines or cables (e.g., use of diverters and anti-nesting devices).
- Wireless Projects
  - New Wireless Communication Towers
    - Follow USFWS Guidelines For Recommendations On Communications Tower Siting, Construction, Operation, and Decommissioning (*USFWS 2012a*).
    - Insert anti-nesting devices on existing or new structures.
    - Site towers away from known communal bat use areas and high bird use areas to the extent practicable or feasible.
    - Construct new towers more than 3 miles from any ocean (or Great Lake shoreline), as practicable or feasible. If towers must be closer than 3 miles from the shoreline:
      - Conduct site-specific studies;
      - Ensure towers are self-standing (un-guyed); and
      - Ensure towers are short enough to not require lighting, as practicable or feasible. If towers do require lighting, install lighting that does not include steady-burning lights, as practicable or feasible.
    - Follow the FAA requirements to eliminate steady-burning flashing obstruction lights and use only flashing obstruction lights in accordance with FAA Advisory Circulars AC 70/7460-1L and AC 150/5345-43H (*FAA 2016a; FAA 2016b; FCC 2017*).
  - Collocation on Existing Wireless Tower, Structure, or Building
    - Follow the FAA requirements to eliminate steady-burning flashing obstruction lights and use only flashing obstruction lights in accordance with FAA Advisory Circulars AC 70/7460-1L and AC 150/5345-43H (*FAA 2016a; FAA 2016b; FCC 2017*).

### 11.6.3. Fisheries and Aquatic Habitats

#### 11.6.3.1. BMPs and Mitigation Measures for All Project Types

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to fisheries and aquatic habitats. The following BMPs and mitigation measures would apply to all project types:

- Avoid construction, as practicable, during sensitive seasons for fish such as migration, spawning, egg development (including intra-gravel development) and larval fish (benthic<sup>15</sup> or pelagic<sup>16</sup>) development (sensitive seasons/time periods vary by species and location).
- Consolidate facilities as much as possible.
- Use site-appropriate native plants and invasive-free materials (e.g., seed mixes, rock, mulch, soil) for revegetation and restoration efforts.
- Revegetate and restore riparian areas and other vegetated areas around aquatic resources to the extent possible once construction activities are complete.
- Report spills or other observed pollutants to the appropriate agency immediately.
- Prepare an SPCC Plan to prevent, contain, and report accidental spills.
- Instruct all construction employees to avoid harassment and disturbance of fish and other aquatic species, and report any signs of mortality to the appropriate agency immediately.
- Avoid productive habitats to the extent practicable, such as coastal wetlands, inland waterways, essential fish habitats, spawning areas, and reefs.
- Minimize sedimentation and turbidity in fish habitats by implementing sediment and erosion control measures, as practicable; the use of such measures (e.g., silt fences, silt curtains,<sup>17</sup> and erosion control blankets) could reduce erosion and sedimentation.
- Minimize the amount of fill placed in wetlands and streams when constructing access roads by installing bridges and or culverts; work with the appropriate agency to use culverts and bridges that are appropriately designed and sized for fish passage.
- Use set-backs when clearing vegetation for construction, where appropriate, from riparian zones to avoid removal of important fish cover such as vegetation, boulders, and large woody debris.
- Perform regular maintenance checks of equipment near coastal areas, waterways, and other protected areas to minimize detachment of components reaching critical habitat.
- Consider tidal regimes when deploying near coastal areas to help prevent loss of equipment and marine debris in nearby coastal fish habitat.

---

<sup>15</sup> Benthic means anything associated with or occurring on the bottom of a body of water.

<sup>16</sup> Pelagic means anything that inhabits the water column as opposed to being associated with the sea floor, generally occurring anywhere from the surface to 1,000 meters (*NOAA 2006*).

<sup>17</sup> Silt curtains are floating barriers used in marine construction and remediation to control silt and sediment in a body of water.

- Utilize buffer zones, temporary or permanent native seeding on disturbed ground, ground cover, plastic sheeting, and/or matting to minimize sedimentation.
- Develop a storm water pollution prevention plan.
- Avoid construction/deployment, as practicable, in productive riparian zones, marine preserves, and wetlands since construction could potentially result in less refuge for fish, fundamental changes in channel structure (e.g., loss of pool habitats), instability of stream banks, and alteration of nutrient and prey sources within the shoreline aquatic community (*Hanson et al. 2003*).
- Implement an emergency response plan for fuel spills and environmental emergencies.
- Include secondary containment for hazardous materials such as fuels and use uplands, as feasible, away from streams and waterbodies for refueling of construction or operations equipment.
- Implement invasive species plans to minimize introduced aquatic plant and animal species into the Proposed Action areas (e.g., wash and inspect equipment and vehicles before moving from one drainage basin or watershed to the next).
- Minimize construction noise in and near fish habitats, as practicable.
- Avoid physical barriers in waterbodies, to the extent practicable, during installation and operation to allow for the migration of invertebrates and other aquatic fauna.
- Follow all applicable federal and state/territory requirements for construction activities near fish and fish habitat.

#### ***11.6.3.2. Project-Type Specific BMPs and Mitigation Measures***

The following project-specific BMPs and mitigation measures apply to Wired Projects in addition to those listed above for all project types:

- New Build – Buried Fiber Optic Plant
  - Use horizontal directional drilling where possible and appropriate, for stream crossings to avoid potential impacts to the streambed, banks, and associated fish habitat.

### **11.6.4. Threatened and Endangered Species and Species of Conservation Concern**

#### ***11.6.4.1. BMPs and Mitigation Measures for All Project Types***

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to threatened and endangered species and species of conservation concern. The following BMPs and mitigation measures would apply to all project types:

- Fully adhere to the compliance requirements of the Endangered Species Act.
- Engage in early consultation with appropriate agencies and stakeholders including, but not limited to, USFWS, NMFS, and state/territory wildlife and natural resources agencies.
- Avoid conducting deployment activities in areas with known locations or habitats for threatened and endangered plants.
- Instruct all construction employees to identify and report any sightings of listed species, to avoid harassment and disturbance of wildlife, and to not disturb or enter any nearby caves or mines.
- Follow food and waste management protocols to minimize attractants to the deployment site.
- Minimize construction of all roads, fences, and other ancillary facilities to reduce overall habitat fragmentation.
- Use site-appropriate native plants and invasive-free materials (e.g., seed mixes, rock, mulch, soil) for revegetation and restoration efforts.
- Prohibit any pets on site during construction or deployment.
- Report observations of sensitive species that are injured, dead, or entangled to the appropriate agency immediately.
- Consolidate Proposed Action facilities as much as possible (e.g., collocation and use of existing ROWs).
- Implement seasonal and spatial buffer zones for construction and other potentially disturbing activities during sensitive periods for listed species such as breeding, nesting, calving/pupping, haulout, migration, spawning, and egg development as identified by USFWS, the NMFS, and/or relevant state/territory agency.
- Avoid removal or disturbance of forest to the maximum extent practicable and ensure that any unavoidable forest impacts do not result in the loss of listed snails, butterflies, bird breeding habitat, or bat roost sites or hibernacula.<sup>18</sup>
- Avoid activities within seagrass beds and control turbidity to minimize potential indirect impacts on seagrass.
- Avoid potential impacts to known grouper spawning sites.
- Avoid potential impacts within coastal estuarine habitats.
- Train construction and deployment staff in the Proposed Action BMPs and mitigation measures and incentivize reporting of any lapses in BMP and mitigation measure implementation.
- Implement a strict policy prohibiting pets on site and prohibiting hunting or fishing or any other action that would result in any avoidable disturbance of listed species.

---

<sup>18</sup> Hibernacula are the habitats within which animals hibernate or otherwise seek refuge for extended periods.

- Use setbacks from riparian zones when clearing vegetation for construction to avoid removal of important fish cover such as vegetation boulders and large woody debris.
- Follow all applicable federal and state/territory requirements for construction activities near fish and fish habitat.
- Use appropriate sediment and erosion control measures to minimize sedimentation and turbidity in fish habitats.
- Minimize the use of coastal lighting, particularly in the vicinity of known turtle nesting areas. If the use of coastal lighting in sea turtle use areas is unavoidable, use turtle safe lighting instead of normal lights (low-pressure sodium-vapor lighting or red lights that emit a very narrow portion of the visible light spectrum) and consult with local sea turtle experts on the design of the coastal lighting plan.
- Implement an emergency response plan for fuel spills and environmental emergencies.
- Include secondary containment for hazardous materials and use non-wetland sites away from streams and waterbodies for refueling of construction or operations equipment.
- Implement invasive species plans to minimize introduced aquatic plant and animal species into the areas affected by the Proposed Action (e.g., wash and inspect equipment and vehicles before moving from one drainage basin or watershed to the next).
- Implement the same construction and deployment BMPs and mitigation measures for any operational activities that involve any major infrastructure replacement as part of ongoing system maintenance.
- Implement seasonal and spatial buffer zones for operational activities that involve potentially disturbing activities in listed species use areas.
- Implement “good housekeeping” procedures to ensure that during operation the sites would be kept clean of debris, garbage, and fugitive trash or waste.
- Turn off all unnecessary lighting at night.
- Avoid or minimize the use of sodium vapor lights at site facilities to reduce attraction of migratory birds.
- Develop and implement operational monitoring and adaptive management procedures.
- Prepare an SPCC Plan to prevent, contain, and report accidental spills.
- Post and enforce speed limits on access roads, particularly within areas where a listed animal may be struck by construction and/or maintenance vehicles.

#### **11.6.4.2. Project-Type Specific BMPs and Mitigation Measures**

The following project-specific BMPs and mitigation measures apply in addition to those listed above for all project types:

- **Wired Projects**
  - New Build – Aerial Fiber Optic Plant
    - Follow recommendations outlined by the Avian Power Line Interaction Committee and USFWS (*APLIC 2006; APLIC and USFWS 2005; APLIC 2012*) for any aboveground lines or cables (e.g., use of diverters and anti-nesting devices).
  - Collocation on Existing Aerial Fiber Optic Plant
    - Follow recommendations outlined by the Avian Power Line Interaction Committee and USFWS (*APLIC 2006; APLIC and USFWS 2005; APLIC 2012*) for any aboveground lines or cables (e.g., use of diverters and anti-nesting devices).
- **Wired Projects**
  - Use of Existing Buried or Aerial Fiber Optic Plant or Existing Submarine Cable
    - Minimize underwater construction noise in all aquatic habitats by minimizing vessel speed, using quieter equipment or technologies, or deploying bubble curtains or other noise screens during underwater work.
    - Implement a marine observer program during construction and operation to avoid and minimize boat strikes to whales, sea turtles, seals, and dugongs.
- **Deployable Technologies**
  - Restrict aircraft operation at altitudes lower than 1,500 feet within 0.5 mile of known pupping or haulout areas during critical life stages, with the exception only for severe weather conditions.
  - Keep aircraft above altitudes higher than 1,500 feet within 0.5 mile of walruses and seals hauled out on land or ice, with the exception only for severe weather conditions.

### **11.7. LAND USE, AIRSPACE, AND RECREATION**

#### **11.7.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to land use, airspace, and recreation. The following BMPs and mitigation measures would apply to all project types:

- Give preference to development options that involve use of existing physical infrastructure, and/or that do not involve new aboveground structures (e.g., collocation on existing structures, new buried or undersea infrastructure, etc.), especially near recreation lands.

- Give preference to development options that are compatible with existing zoning and applicable comprehensive plans.
- Select infrastructure locations that are screened from view by topography and/or vegetation, that do not require noticeable permanent changes in landforms (i.e., cut and fill) or vegetation, and that are as far from surrounding residences as possible.
- Retain existing vegetation wherever possible to provide visual screening of new infrastructure.
- Select infrastructure designs that minimize contrast with the surrounding landscape and land uses.
- Avoid infrastructure locations on easements established for wildlife habitat and other conservation purposes, to the extent practicable and feasible, and ensure compliance with applicable conditions and restrictions for locations on conservation lands.
- Select infrastructure locations that are as far from recreation lands as practicable and feasible.
- Select infrastructure designs that minimize construction footprints.
- Give preference to infrastructure locations that are compatible with existing park or recreation planning documents.
- Avoid or minimize, as practicable and feasible, construction activities in areas covered by existing incompatible easements.

### **11.7.2. Project-Type Specific BMPs and Mitigation Measures**

The following project-specific BMPs and mitigation measures apply in addition to those listed above for all project types:

- Wireless Projects
  - New Wireless Communication Towers
    - Select the shortest possible structures necessary to meet the FirstNet system's needs, and only deploy towers less than 200 feet in height.
    - Place new infrastructure near existing similar infrastructure where possible, to minimize the total number of new aerial navigation hazards.
    - Avoid placing new infrastructure near airports or the areas regulated under the FAA's Part 77 regulations (*FAA 2016a*).
    - Avoid placing new infrastructure within Military Operations Areas or under Military Training Routes.
    - Work closely with the National Park Service (NPS) to address any concerns they might have if a tower needs to be placed in an area that might affect the nighttime sky at an NPS unit.

- Deployable Technologies
  - Limit the use of Deployable Airborne Communications Architecture to areas less likely to be used by commercial, military, or private aviation (to the degree feasible, and in consultation with the FAA and Department of Defense).

## **11.8. VISUAL RESOURCES**

### **11.8.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to visual resources. The following BMPs and mitigation measures would apply to all project types:

- Take the scenic character of the surrounding area into account in the proposed design to reasonably minimize or avoid visual impacts to the surrounding area when viewed from existing roadways or shorelines (design structures to complement the natural landscape; for example, use paint that blends with the surrounding landscape).
- Utilize non-reflecting coatings on towers, antennas, buildings, and associated structures where possible.
- Implement sensitive grading techniques that blend grading with the natural terrain.
- Treat all disturbed slopes for erosion control.
- Minimize the area of bare soil at any one time as much as possible by constructing in stages.
- Revegetate disturbed areas as progressively and quickly as practicable to restore vegetative cover.
- Reduce or eliminate the need for lighting on poles or structures, or to restrict the duration and directionality of needed lighting.
- Give preference to development options that involve use of existing physical infrastructure (e.g., collocation on existing structures, new buried or undersea infrastructure, etc.), and specifically avoid the construction of new aerial fiber optic plant and/or new wireless communication towers within, or in locations within sight of, federal or other lands where visual resources are regulated (e.g., units of the National Park System, or areas where local zoning regulations emphasize protection of views or aesthetic conditions), or where residents and visitors have come to expect high visual quality and the absence of human-built structures.
- Select infrastructure locations that are screened from view by topography and/or vegetation, that do not require noticeable permanent changes in landforms (i.e., cut and fill) or vegetation, and that are as far from surrounding residences as possible.
- Select infrastructure designs that minimize construction footprints.
- Retain existing vegetation wherever possible to provide visual screening of new infrastructure.

- Select infrastructure designs that minimize contrast with the surrounding landscape.
- Comply with all relevant and applicable federal regulations and guidance regarding visual and aesthetic conditions and impacts.

### **11.8.2. Project-Type Specific BMPs and Mitigation Measures**

The following project-specific BMPs and mitigation measures apply in addition to those listed above for all project types:

- Wireless Projects
  - New Wireless Communication Towers
    - Work closely with the NPS to address any concerns they might have if a tower needs to be placed in an area that might affect the nighttime sky at an NPS unit.
- Deployable Technologies
  - Select parking locations for deployable technologies that are screened from view by topography or vegetation, that are as far away from as many observers as possible, and that are not in or near areas considered scenic, such as shorelines, ridgelines, or scenic roads.
  - Select deployable designs that minimize the use of nighttime lighting, that include shielded or directional nighttime lighting, and/or that use the minimum nighttime lighting required for safe operations.

## **11.9. SOCIOECONOMICS**

### **11.9.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to socioeconomics. The following BMPs and mitigation measures would apply to all project types:

- Avoid development of new wireless communication towers in or near residential areas to reduce the potential that such activities could have adverse impacts on residential property values. Acceptable distances could vary, depending on the nature of the aesthetic impacts, the nature of other objectionable effects that influence property values, and other factors such as residential density, local concern over aesthetics, desire for improved wireless communications, local media response, and more. According to a recent literature review, measurable adverse impacts of wireless communication towers on property values are generally not observable beyond 300 meters (984 feet), and often are not observable beyond 100 meters (328 feet) (*Bond et al. 2013*).

- Avoid development or enlargement of storage, staging, and launch/landing areas for deployable technologies in or near residential areas to reduce the potential that such activities could have adverse impacts on residential property values. Acceptable distances could vary depending on the size of the facility, types of activities occurring there, the nature of the aesthetic impacts or other aspects that influence property values, and other factors such as residential density, local concern over aesthetics, desire for improved wireless communications, local media response, and more.
- Give preference to development options that involve use of existing physical infrastructure (e.g., collocation on existing structures, new buried or undersea infrastructure, etc.).
- Select infrastructure locations that are screened from view by topography and/or vegetation, that do not require noticeable permanent changes in landforms (i.e., cut and fill) or vegetation and that are as far from surrounding residences as possible.
- Retain existing vegetation wherever possible to provide visual screening of new infrastructure.
- Select infrastructure designs that minimize contrast with the surrounding landscape.
- Give preference to hiring workers who are local residents, where practicable. In addition to reducing influx and associated social cohesion effects; this BMP would have the following effects on socioeconomic resources:
  - Reducing demand for public services, since employees would already be residents (i.e., existing public service users).
  - Increasing local employment and economic activity through wages and spending.
- Share deployment plans with public service providers, especially first responders, as early in the process as possible, and throughout the deployment process. This will provide advance notice to public service providers, and would particularly allow first responders to be better prepared for emergencies that could arise during deployment.
- Consult with subsistence users (including Indigenous Peoples and other individuals or groups for whom subsistence is a way of life) to understand the species and habitats used for subsistence activities, as well as the seasonal cycle of subsistence activity.
- Select infrastructure locations that minimize or avoid disturbance of subsistence species habitat.

### **11.9.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## **11.10. ENVIRONMENTAL JUSTICE**

### **11.10.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential environmental justice impacts. The following BMPs and mitigation measures would apply to all project types:

- Identify specific communities (i.e., neighborhoods or populations that may be contained within individual block groups), where possible, that are at risk of experiencing environmental justice impacts (this is important in Alaska given the size of block groups, particularly in rural areas). Conduct targeted outreach to these communities, tailored to the specific racial, ethnic, financial, and/or cultural background, as early in the development process as possible to explain the nature and extent of specific potential impacts, and to gain feedback on those impacts.
- Consult with subsistence users (including Indigenous Peoples and other individuals or groups for whom subsistence is a way of life) to understand the species and habitats used for subsistence activities, as well as the seasonal cycle of subsistence activity.
- Give preference to development options that involve use of existing physical infrastructure (e.g., collocation on existing structures, new buried or undersea infrastructure, etc.).
- Select infrastructure locations, where possible, that are not within or near environmental justice communities, particularly new build options.
- Follow all BMPs identified throughout this chapter that reduce adverse impacts of construction activities, such as generation of noise, dust, and traffic.
- Avoid siting deployment activities and facilities requiring construction in proximity to environmental justice communities to reduce the potential that such activities would be seen as disproportionately affecting environmental justice communities. In general, proximity means within a distance at which noise and dust would be considered objectionable or where effects on traffic volume or patterns would be considered detrimental to local residents or businesses.
- Avoid development of new wireless communication towers in proximity to environmental justice communities because of their potential impacts on property values and to reduce the potential that such activities would be seen as disproportionately affecting environmental justice communities. Proximity could be defined variably depending on the nature of the aesthetic impacts, nature of other objectionable effects that influence property values, and other factors such as local concern over aesthetics, desire for improved wireless communications, local media response, and more. According to a recent literature review, measurable adverse impacts on property values are generally not observable beyond 300 meters (984 feet), and often are not observable beyond 100 meters (328 feet) (*Bond et al. 2013*).

### **11.10.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## **11.11. CULTURAL RESOURCES**

### **11.11.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to cultural resources. The following BMPs and mitigation measures would apply to all project types:

- Comply with the requirements of Section 106 of the National Historic Preservation Act.
- Follow all applicable federal and state requirements if inadvertent discoveries of human remains are made during deployment or operations.
- Ensure usage of an appropriate indirect effects Area of Potential Effects as part of pre-siting or pre-deployment surveys to sufficiently account for potential indirect effects to cultural resources.
- Establish procedures for pre-deployment monitoring if a project has the potential to adversely indirectly affect historic properties to collect baseline data, monitor potential indirect effects during deployment, and determine if effects have occurred post-deployment. Develop BMPs and mitigation measures as part of a Memorandum of Agreement or Programmatic Agreement to address any potential effects, if they were to occur.
- Use low-impact construction alternatives, when feasible. For instance, ripping could be used as an alternative to blasting near structures or archaeological sites identified as at risk of effects from vibration. Other techniques such as bored piling could be used to minimize the vibration generated, where possible.
- Restrict the timing of deployment activities so as not to disturb the use of historic properties, as applicable. Stop work at certain times when traditional and/or religious properties are in use, such as during significant events (e.g., religious festivals or ceremonies).
- Design projects to mitigate potentially negative visual and auditory impacts of facilities. The following visual and noise abatement techniques should be considered: noise-reducing barriers, low-profile constructions, proper siting to maximize the use of topography and vegetation, screening, blending with topographic forms and existing vegetation patterns, and use of environmental coloration or advanced camouflage techniques to limit visual effects.
- Consult with site users through a community liaison team to understand site usage and how the project could affect user access.
- Arrange alternative access using stakeholder input if access to an important cultural heritage site is restricted or blocked. Notify the public of the blockage and alternate means of access.

- Follow all applicable federal requirements for agency and tribal consultation on the identification of and assessment of effects to cultural resources.
- Avoid deployment in areas with known historic properties and deploy equipment and facilities in alternate locations if practical.

### **11.11.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures for cultural resources beyond those listed above for all project types.

## **11.12. AIR QUALITY**

### **11.12.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to air quality. The following BMPs and mitigation measures would apply to all project types:

- Follow all applicable federal, state/territory, and local requirements for obtaining air pollution control permits for applicable emission sources.
- Use engines certified to the lowest emission standards and engines that burn alternative fuels (e.g., natural gas, biofuels), and/or install emission control devices (when practicable) for equipment with internal combustion engines.
- Use vehicles with hybrid or electric technology, when possible, to reduce or eliminate criteria pollutant emissions from fuel combustion.
- Use renewable energy, as practicable or feasible, for backup power at buildout locations (cell tower sites, for example).
- Control dust from construction or other land-disturbing activities by spraying water on roads/construction areas, limiting the area of uncovered soil to the minimum needed for each activity, siting staging areas to minimize fugitive dust, using a soil stabilizer (chemical dust suppressor), mulching areas or using a temporary gravel cover, limiting the number and speed of vehicles on the site, and covering trucks hauling dirt.
- Post and enforce speed limits on dirt/gravel roads to reduce airborne fugitive dust.
- Limit idling time of construction vehicle and equipment and conduct proper vehicle maintenance.
- Minimize the time of operation of drones or aircraft below the mixing height (i.e., typically estimated at 3,000 feet aboveground level).
- Use electric or alternate fueled ground support equipment for drones or other aircraft.

- Avoid placement of air emission sources within Class I Areas to the extent possible.<sup>19</sup>
- Ensure all activities are in compliance with general conformity requirements in nonattainment and maintenance areas.
- Ensure all activities conform to the State or Territory Implementation Plan.
- Follow all applicable federal, state/territory, and local air quality requirements, including standards for nuisance (where possible) and fossil fuel-powered generators.
- Ensure all diesel engines are compliant with USEPA emission standards for the corresponding engine class.
- Ensure all equipment is appropriately sized for the Proposed Action.
- Consider using hydrogen-fueled generators where practicable to reduce nitrous oxides emissions.
- Obtain permits, where required, to install and operate fossil fuel-powered generators.<sup>20</sup>
- Implement a dust control plan for construction activities and any travel over unpaved roads.
- Use only ultra-low sulfur fuel (where commercially available) for both on-road and off-road diesel engines.
- Ensure all fuel-burning equipment including, but not limited to, heavy construction equipment and power generator, is maintained in accordance with manufacturer's specifications.

### **11.12.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## **11.13. NOISE AND VIBRATIONS**

### **11.13.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential noise and vibration impacts. The following BMPs and mitigation measures would apply to all project types:

- Use noise mufflers on heavy equipment to limit noise and vibration exposure on noise and vibration-sensitive receptors during construction and grading activities near populated areas and other noise sensitive receptors, including parks or other protected areas; limit the use of such equipment to operation during daytime hours only.

---

<sup>19</sup> Class I areas are national parks and wilderness areas in attainment or unclassifiable areas that exceed 5,000 acres in size and were in existence on August 7, 1977.

<sup>20</sup> Permits for stationary sources (diesel generators) should be obtained in advance of future deployment.

- Avoid, as practicable, deployment in areas with highly sensitive receptors and construct facilities in alternate locations for those projects involving heavy equipment for deployment. Such sensitive areas include foraging or breeding areas for disturbance-sensitive congregatory species such as some species of bats, colonial waterbirds, and seabirds, particularly those species that are listed as threatened or endangered, as well as wilderness areas (where recreational activities such as hiking, bird watching, etc. occur).
- Follow all applicable federal, state/territory, county/borough, and local requirements for construction and operation noise and vibration control to avoid or minimize increased noise and vibration.
- Follow all state/territory and federal guidelines for limiting aircraft noise and vibration on populated areas and over national parks.
- Include mitigation measures during the design and implementation phases of the project for equipment that is expected to generate significant noise or vibration (e.g., use of noise barriers such as walls, shrubbery).
- Ensure, as practicable, all heavy equipment, power generators, and boats are maintained in accordance with manufacturer's specifications.
- Limit construction activities to daytime hours (7 a.m. to 7 p.m.) to the extent possible when increased noise levels are more tolerable and avoid construction on Sundays and legal holidays.
- Implement BMPs and mitigation measures as directed by the local jurisdiction such as avoiding unnecessary revving of engines, switching off equipment when not in use, changing location of stationary construction equipment, minimizing drop height of materials, replacing conventional audible reversing alarms with more quiet alternative reversing warning systems, siting equipment away from noise sensitive areas (if practicable), notifying adjacent residents in advance of construction work, installing temporary acoustic barriers around stationary construction noise sources, and other controls as needed to reduce increased noise levels.

### **11.13.2. Project-Type Specific BMPs and Mitigation Measures**

The following project-specific BMPs and mitigation measures apply in addition to those listed above for all project types:

- Wired Projects
  - New Build – Aerial Fiber Optic Plant
    - Do not permit underwater blasting and pile driving activities in any waterbody.
  - New Build – Submarine Fiber Optic Plant
    - Do not permit underwater blasting and pile driving activities in any waterbody.

## **11.14. CLIMATE CHANGE**

### **11.14.1. BMPs and Mitigation Measures for All Project Types**

To minimize the GHG emissions of the Proposed Action, FirstNet and/or their partners would require, as practicable or feasible, implementation of the following BMPs and mitigation measures:

- Ensure that equipment used is the most energy efficient, or use state-of-the-art equipment to increase energy efficiency.
- Use more fuel-efficient diesel-power generation units or low-emission units such as gasoline- or hydrogen-fueled power generators.
- Ensure that construction vehicles are running only when required for construction and reduce or limit unnecessary idling.
- Ensure all operators and drivers have received adequate training to efficiently use equipment.
- Conduct regular maintenance and inspection on equipment to ensure that it is running at the maximum energy efficiency.
- Use renewable energy, as practicable or feasible, for backup power at buildout locations (cell tower sites, for example).
- Minimize disturbed land area and soil disturbance by co-locating where it is feasible.
- Revegetate disturbed land areas after construction where it is feasible.
- Use access roads previously used during deployment activities for maintenance and operational activities.

To minimize climate change effects on the Proposed Action, FirstNet and/or their partners would require, as practicable or feasible, implementation of the following BMPs and mitigation measures to provide for adaptation to climate change effects:

- Ensure design of aboveground structures and equipment has included allowances for maximum temperature and precipitation changes.
- Continuously monitor and reinforce structures build on permafrost.
- Assess sea-level rise prior to installation of infrastructure near coastal areas.
- To allow for extreme weather events and flooding, monitor risk-prone areas and reinforce structures or relocate structures such as deployables outside of high-risk areas as needed.
- Work jointly with public authorities in the implementation of monitoring plans and action plans related to potential impacts that could affect the Proposed Action.

### **11.14.2. Project-Type Specific BMPs and Mitigation Measures**

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## **11.15. HUMAN HEALTH AND SAFETY**

### **11.15.1. BMPs and Mitigation Measures for All Project Types**

FirstNet and/or their partners would require, as practicable or feasible, the BMPs and mitigation measures listed below to help avoid or minimize potential impacts to human health and safety. The following BMPs and mitigation measures would apply to all project types:

- Follow all applicable federal, state/territory, and local requirements for hazardous materials and hazardous waste management.
- Utilize trained and licensed heavy equipment operators, when available or required.
- Develop a site-specific Health and Safety Plan that identifies all potential physical and chemical hazards present at the site, including historic contamination.
- Develop and utilize Standard Operating Procedures for site preparation activities and include descriptions of work practice controls and administrative controls.
- Ensure workers wear proper safety equipment as appropriate to the potential hazards present, such as high visibility safety vests, hard hats, steel-toe boots, gloves, eye protection, and hearing protection.
- Provide daily safety meetings to review activities, potential hazards, and safety objectives.
- Avoid site preparation work in areas with high vehicle traffic volume, such as road ROWs.
- Avoid site preparation work in areas known to contain environmental contamination.
- Incorporate all BMPs and mitigation measures listed in Section 11.1, Infrastructure, on potential impacts to transportation system capacity and safety.
- Incorporate all BMPs and mitigation measures listed in Section 11.2, Soils, for potential impacts from soil erosion.
- Incorporate all BMPs and mitigation measures listed in Section 11.4, Water Resources, for potential impacts to water quality – sedimentation, pollutants, nutrients or water temperature, and changes to groundwater or aquifer characteristics.
- Incorporate all BMPs and mitigation measures listed in Section 11.12, Air Quality.
- Incorporate all BMPs and mitigation measures listed in Section 11.13, Noise and Vibrations.
- Prepare an SPCC Plan to prevent, contain, and report accidental spills.
- Conduct air and noise monitoring to ensure levels stay within health-protective levels for communities and workers and, as required, that workers are trained and comply with personal protective equipment requirements as established by the Occupational Safety and Health Administration (OSHA).
- Search for the location of known contaminated sites prior to site selection in the area where the Proposed Action site is being considered, for new or existing infrastructure projects.

- Ensure that appropriate measures are taken in compliance with applicable regulations (including Resource Conservation and Recovery Act and Comprehensive Environmental Response, Compensation, and Liability Act)<sup>21</sup> if construction occurs in an area where there is the potential for legacy contamination, to protect workers and the public from unacceptable levels of exposure to contaminants as a result of deployment activities.
- Establish an emergency response plan (including emergency preparedness and response activities, resources, and responsibilities) to attend to specific emergencies (e.g., accidental spills) that could arise during deployment.
- Ensure that reporting requirements are followed in the event that Emergency Planning and Community Right-to-Know Act reporting thresholds are reached for the shipping, handling or storage of gasoline or diesel used for equipment and generators.<sup>22</sup>
- Establish a grievance mechanism or other stakeholder engagement tool that is accessible and culturally appropriate for use by the community to express concerns regarding the Proposed Action.
- Implement community education and public awareness, as needed, about the Proposed Action's traffic, routes used, road signage, and safety which are particularly critical in high-risk areas.
- Use signage to clearly mark construction sites, and establish boundaries and barricades to keep people out of dangerous areas.
- Make sure an incident investigation procedure is in place that can be specifically used for any near misses or incidents involving workers and community members.
- Ensure all workers are appropriately trained in wildlife identification and hazard management to minimize the likelihood of wildlife attacks.
- Ensure all workers are appropriately trained in weather hazard management and equipped with all necessary personal protective equipment.
- Inform community members of dates and times of construction activities that are likely to generate noise at levels above 55 A-weighted decibels at the residences or workplaces of those individuals.
- Monitor land clearing and construction sites for areas of standing water, including ditches and holes in the ground, as well open receptacles (e.g., empty barrels) and fill or eliminate these hazards to prevent mosquito breeding.

---

<sup>21</sup> The main objective of the Resource Conservation and Recovery Act of 1976 is to “protect human health and the environment from the potential hazards of waste disposal, to conserve energy and natural resources, to reduce the amount of waste generated, and to ensure that wastes are managed in an environmentally sound manner” (*USEPA 2015a*). The Comprehensive Environmental Response, Compensation, and Liability Act or Superfund law was designed to help clean up hazardous waste sites and releases of pollutants or contaminants that may negatively affect public health (*USEPA 2011*).

<sup>22</sup> The Emergency Planning and Community Right-to-Know Act of 1986 was designed to assist communities in planning for emergencies related to hazardous waste. The law also requires industry to inform federal, state, and local governments on the storage, use, and releases of hazardous chemicals: 75,000 gallons for gasoline; 100,000 gallons for diesel; and 10,000 pounds for all other hazardous chemicals (*USEPA 2015b*).

- Given that no filariasis-, chikungunya-, or dengue-specific OSHA recommendations are available, follow OSHA recommended Workplace Precautions against West Nile Virus, another mosquito-borne illness for which, like chikungunya and dengue, the only preventative measure is avoidance of bites by infected mosquitoes.
- Ensure that the appropriate medication is available for treatment of any filariasis infections that may arise in the workforce for projects located in areas where filariasis is known to occur.

### 11.15.2. Project-Type Specific BMPs and Mitigation Measures

There are no project-specific BMPs and mitigation measures beyond those listed above for all project types.

## TABLE OF CONTENTS

|                                                                                                                                              |            |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1. Introduction.....</b>                                                                                                                  | <b>1-1</b> |
| 1.1. Overview and Background .....                                                                                                           | 1-1        |
| 1.2. Programmatic Approach and Tiering.....                                                                                                  | 1-3        |
| 1.3. Project Regions and Description of the Proposed Action Area .....                                                                       | 1-5        |
| 1.4. Purpose and Need for the Proposed Action .....                                                                                          | 1-6        |
| 1.5. Federal Agency Participation.....                                                                                                       | 1-8        |
| 1.5.1. Lead Agency .....                                                                                                                     | 1-8        |
| 1.5.2. Cooperating Agencies .....                                                                                                            | 1-8        |
| 1.5.3. Consulting Parties .....                                                                                                              | 1-8        |
| 1.6. Cultural Resources Consultation.....                                                                                                    | 1-9        |
| 1.7. The NEPA Process and Public Involvement .....                                                                                           | 1-9        |
| 1.7.1. Public Involvement .....                                                                                                              | 1-9        |
| 1.7.2. Scoping .....                                                                                                                         | 1-9        |
| 1.7.3. Public Comment on the Draft PEIS .....                                                                                                | 1-10       |
| 1.8. Overview of Relevant Federal Laws and Executive Orders .....                                                                            | 1-11       |
| 1.8.1. National Environmental Policy Act .....                                                                                               | 1-11       |
| 1.8.2. National Historic Preservation Act .....                                                                                              | 1-12       |
| 1.8.3. Endangered Species Act .....                                                                                                          | 1-13       |
| 1.8.4. Magnuson-Stevens Fishery Conservation and Management Act .....                                                                        | 1-13       |
| 1.8.5. Marine Mammal Protection Act .....                                                                                                    | 1-14       |
| 1.8.6. Migratory Bird Treaty Act .....                                                                                                       | 1-14       |
| 1.8.7. Clean Water Act.....                                                                                                                  | 1-14       |
| 1.8.8. Coastal Zone Management Act.....                                                                                                      | 1-15       |
| 1.8.9. Occupational Safety and Health Act.....                                                                                               | 1-15       |
| 1.8.10. Executive Order 11988 (as Amended by EO 13690) – Floodplain<br>Management.....                                                       | 1-16       |
| 1.8.11. Executive Order 11990 – Protection of Wetlands .....                                                                                 | 1-16       |
| 1.8.12. Executive Order 12898 – Federal Actions to Address Environmental<br>Justice in Minority Populations and Low-Income Populations ..... | 1-17       |
| 1.8.13. Executive Order 13186 – Responsibilities of Federal Agencies to<br>Protect Migratory Birds .....                                     | 1-17       |
| 1.8.14. Executive Order 13693 – Planning for Federal Sustainability in the<br>Next Decade.....                                               | 1-18       |
| 1.9. PEIS Organization .....                                                                                                                 | 1-18       |
| 1.10. References.....                                                                                                                        | 1-19       |

## 12. COMPARISON OF ALTERNATIVES

### 12.1. INTRODUCTION

This chapter presents, in summary form, impact ratings for the Preferred Alternative, as well as each of the remaining alternatives outlined in Section 2.2, Description of Alternatives.

Under the Preferred Alternative, FirstNet and/or their partners would construct a nationwide broadband LTE network using a combination of the wired, wireless, deployable, and satellite technologies. There is currently a wide range of technologies that FirstNet may use to implement and deploy the Nationwide Public Safety Broadband Network (NPSBN). Full descriptions of wired, wireless and deployable projects that FirstNet may consider are explained in Section 2.1.2, Proposed Action Infrastructure.

Under the Deployable Technologies Alternative, FirstNet and/or their partners would procure, deploy, and maintain a nationwide fleet of mobile communications systems, including ground-based and aerial deployable technologies, to provide temporary coverage in areas not covered by existing, usable infrastructure. There would be no collocation of equipment and no new construction associated with wired or wireless projects discussed above under the Preferred Alternative. Some limited construction could be associated with implementation such as land clearing or paving for parking or staging areas. Generally, these units would be deployed at times of an incident to the affected area for either planned or unplanned incidents or events. Equipment would be stationed in every state and territory, often at multiple locations in each state or territory, to facilitate suitable response. These mobile communication units would be temporarily installed and may use existing satellite, microwave, or radio systems for backhaul.

Under the No Action Alternative, the NPSBN would not be constructed; there would be no nationwide, coordinated system dedicated to public safety interoperable communications. The existing multiplicity of communications networks would remain in place, as would the current, known limitations and problems of existing communication networks during times of emergency or disaster. This alternative would require an act of Congress to revise the Act, which currently requires the NPSBN.

This Final Programmatic Environmental Impact Statement contains seven stand-alone chapters devoted to each of the seven states or territories in the Non-Contiguous U.S. region (see Chapters 3 through 9). Each of these chapters discusses fifteen separate resource areas, such as biological resources, land use, air quality, etc. and discusses the potential impacts of (or to) the Proposed Action in an Environmental Consequences section.

Through the programmatic approach, FirstNet has identified four categories of potential impacts at the programmatic level to these resources:

1. *Potentially significant*
2. *Less than significant with best management practices (BMPs) and mitigation measures incorporated*
3. *Less than significant*
4. *No impact*

Two exceptions exist to this categorization of potential impacts based on applicable, resource-specific regulations. For threatened and endangered species and species of conservation concern, categories of potential impacts are defined as: *may affect, likely to adversely affect; may affect, not likely to adversely affect; and no effect*. These impact categories are comparable to those defined in the *Endangered Species Consultation Handbook (USFWS and NMFS 1998)*. In Table 12.2-1, the following numeric values have been assigned for the purpose of equivalency:

1. *May affect, likely to adversely affect*<sup>1</sup>
2. *May affect, not likely to adversely affect*
4. *No effect*

For cultural resources, categories of potential impacts are defined as an *adverse effect; mitigated adverse effect; effect, but not adverse; and no effect*. These impact categories are comparable to those defined in *36 CFR § 800, Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation (NPS 1983)*, and the U.S. National Park Service's *National Register Bulletin: How to Apply the National Register Criteria for Evaluation (NPS 2002)*. In Table 12.2-1, the following numeric values have been assigned for the purpose of equivalency:

1. *Adverse effect*
2. *Mitigated adverse effect*
3. *Effect, but not adverse*
4. *No effect*

## 12.2. COMPARISON OF ALTERNATIVES

Table 12.2-1 below presents impact ratings at the programmatic level of the preferred and remaining alternatives in summary form. Numerical ratings represent whole number averages of ratings across states and territories, rounded conservatively to err on the side of greater potential impact significance.

---

<sup>1</sup> For all impact ratings where a potential affect is found, full and effective implementation of mitigation is assumed.

Evaluation of potential impacts was determined by the nature of both the deployment and operation of the infrastructure associated with each project alternative considered, the Preferred Alternative and the Deployable Technologies Alternative. The specific infrastructure associated with the Deployable Technologies Alternative would be the same as the deployable technologies implemented as part of the Preferred Alternative but would likely be implemented in greater numbers, over a larger geographic extent, and used with greater frequency and duration. It would not include fixed infrastructure such as towers or buried or aerial fiber.

As a result, potential impacts associated with the two project alternatives are generally similar. For most resources, impact ratings are identical, although some differences exist for some resource areas. For example, the Preferred Alternative would have somewhat greater potential impacts than the Deployable Technologies Alternative to water resources, wildlife, and visual resources. Conversely, the Deployable Technologies Alternative would have somewhat greater potential impacts than the Preferred Alternative to air resources.

The No Action Alternative would have no impacts, since by definition no system would be deployed and existing conditions would not change. As required by the National Environmental Policy Act, this alternative is used as a baseline against which the potential impacts of the action alternatives are compared. However, the No Action Alternative would not achieve the Proposed Action's stated purpose or meet the project need as required by the Middle Class Tax Relief and Job Creation Act of 2012 (*Pub. L. No. 112-96, Title VI, 126 Stat. 156 codified at 47 USC § 1401 et seq.*), and as such it would require an act of Congress in order for the No Action Alternative to take place.

Although Table 12.2-1 below focuses primarily on potential adverse impacts at the programmatic level, it is important to note that the ultimate outcome of the NPSBN would provide first responders with the tools they need to do their jobs more effectively and minimize the loss of life in the event of any future natural or manmade emergencies or disasters. In addition, likely substantial beneficial impacts associated with the NPSBN could occur as a result of the creation of direct, indirect, and induced employment. This could occur through new jobs associated with Proposed Action (direct), its contractors and subcontractors (indirect), and other business that serve the Proposed Action employees, contractors, or subcontractors (induced). The Proposed Action could also positively affect economic conditions through equipment purchases and changes in tax revenue, wages, and spending.

**Table 12.2-1: Comparison of Alternatives by Resource Area and Type of Effect<sup>2</sup>**

| Resource Area/Type of Effect                                                                                                                                                                                     | Preferred Alternative |            | Deployable Technologies Alternative |            | No Action Alternative |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------|-------------------------------------|------------|-----------------------|
|                                                                                                                                                                                                                  | Deployment            | Operations | Deployment                          | Operations |                       |
| Infrastructure                                                                                                                                                                                                   |                       |            |                                     |            |                       |
| Transportation system capacity and safety                                                                                                                                                                        | 3                     | 3          | 3                                   | 3          | 4                     |
| Strain on capacity of local health, public safety, and emergency response services                                                                                                                               | 3                     | 3          | 3                                   | 3          | 4                     |
| Modifies existing public safety response telecommunication practices, physical infrastructure, or level of service in a manner that directly affects public safety communication capabilities and response times | 3                     | 3          | 3                                   | 3          | 4                     |
| Effects to commercial telecommunication systems, communications, or level of service                                                                                                                             | 3                     | 3          | 3                                   | 3          | 4                     |
| Effects to utilities, including electric power transmission facilities and water and sewer facilities                                                                                                            | 3                     | 3          | 3                                   | 3          | 4                     |
| Soils                                                                                                                                                                                                            |                       |            |                                     |            |                       |

<sup>2</sup> While the analysis indicates that certain locations could have higher or lower impact ratings, this table is evaluating the potential regional impacts (not state- or territory-specific) associated with the Proposed Action. Site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work.

| Resource Area/Type of Effect                                                                            | Preferred Alternative |            | Deployable Technologies Alternative |            | No Action Alternative |

<sup>3</sup> Potential wetland impacts in American Samoa would be *less than significant with BMPs and mitigation measures incorporated* since wetlands comprise less than 1 percent of the area on American Samoa and are a rare habitat type.

| Increased pressure on existing public services                                                                                                                             | 3                     | 3                | 4                                   | 4          | 4                     |
| Diminished social cohesion/disruption related to influx                                                                                                                    | 3                     | 3                | 4                                   | 4          | 4                     |
| Reduced opportunities for subsistence practices                                                                                                                            | 3                     | 3                | 4                                   | 3          | 4                     |
| Environmental Justice                                                                                                                                                      |                       |                  |                                     |            |                       |
| Effects associated with other resource areas (e.g., cultural resources) that have environmental justice implications due to the affected parties (as defined by EO 12898). | 3 <sup>(6)</sup>      | 3                | 3                                   | 3          | 4                     |

<sup>5</sup> Additional BMPs and mitigation measures may be implemented for towers.

<sup>6</sup> Since environmental justice impacts occur at the site-specific level, site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work. BMPs and mitigation measures may be required to address potential impacts to environmental justice communities at the site-specific level.

| Resource Area/Type of Effect                                                         | Preferred Alternative |            | Deployable Technologies Alternative |            | No Action Alternative |
|--------------------------------------------------------------------------------------|-----------------------|------------|-------------------------------------|------------|-----------------------|
|                                                                                      | Deployment            | Operations | Deployment                          | Operations |                       |
| Cultural Resources <sup>7</sup>                                                      |                       |            |                                     |            |                       |
| Direct effects to historic properties <sup>c</sup>                                   | 3                     | 3          | 3                                   | 3          | 4                     |
| Indirect effects to historic properties (i.e. visual, noise, vibration, atmospheric) | 3                     | 3          | 3                                   | 3          | 4                     |
| Loss of access to historic properties                                                | 3                     | 3          | 3                                   | 3          | 4                     |
| Air Quality                                                                          |                       |            |                                     |            |                       |
| Increased air emissions                                                              | 3                     | 3          | 3                                   | 3          | 4                     |
| Noise and Vibrations                                                                 |                       |            |                                     |            |                       |
| Increased noise and vibration levels                                                 | 3                     | 3          | 3                                   | 3          | 4                     |
| Climate Change                                                                       |                       |            |                                     |            |                       |
| Contribution to climate change through GHG emissions                                 | 3                     | 3          | 3                                   | 3          | 4                     |
| Effect of climate change on Proposed Action-related impacts                          | 4                     | 1-2        | 4                                   | 4          | 4                     |
| Human Health and Safety                                                              |                       |            |                                     |            |                       |
| Potential exposure to hazardous materials                                            | 3                     | 3          | 3                                   | 4          | 4                     |
| Accidents and Injuries                                                               | 3                     | 3          | 3                                   | 3          | 4                     |
| Exposure to Noise                                                                    | 3                     | 3          | 3                                   | 3          | 4                     |
| Communicable Disease                                                                 | 3                     | 3          | 3                                   | 3          | 4                     |

EO = Executive Order; GHG = greenhouse gas

Note: Impact ratings and colors are as follows:

1. (Red) *Potentially significant*
- 1-2. (White) *Range of potentially significant to less than significant with BMPs and mitigations measures incorporated*
2. (Orange) *Less than significant with BMPs and mitigations measures incorporated*
3. (Yellow) *Less than significant*
4. (Green) *No impact*

Note: The impact ratings used for the evaluation of Threatened and Endangered Species and Species of Conservation Concern are as follows:

1. (Red) *May affect, likely to adversely affect*
2. (Orange) *May affect, not likely to adversely affect*
4. (Green) *No effect*

<sup>7</sup> Categories of impacts defined as an *adverse effect*; *mitigated adverse effect*; *effect, but not adverse*; and *no effect* are comparable to those defined in 36 CFR § 800, Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation (NPS 1983), and the U.S. National Park Service's *National Register Bulletin: How to Apply the National Register Criteria for Evaluation* (NPS 2002).

Note: Impact ratings for the evaluation of cultural resources are as follows:

1. (Red) *Adverse effect*
2. (Orange) *Mitigated adverse effect*
3. (Yellow) *Effect, but not adverse*
4. (Green) *No effect*

<sup>a</sup> Because public safety infrastructure is considered a critical facility, Proposed Action activities should avoid the 500-year floodplain wherever practicable per the Executive Orders on Floodplain Management (*EO 11988 and EO 13690*).

<sup>b</sup> Indirect effects are those resulting from direct effects, but they occur elsewhere in space and/or time.

<sup>c</sup> Per the National Historic Preservation Act, an historic property is defined as any district, archaeological site, building, structure, or object that is either listed or eligible for listing in the National Register of Historic Places (NRHP). Cultural resources present within an individual project's Area of Potential Effect are not historic properties if they do not meet the eligibility requirements for listing in the NRHP. Sites of religious and/or cultural significance refer to areas of concern to Indian tribes and other consulting parties that, in consultation with the respective party or parties, may or may not be eligible for listing in the NRHP. These sites may also be considered traditional cultural property (TCP). Therefore, by definition, these significance criteria only apply to cultural resources that are historic properties, significant sites of religious and/or cultural significance, or TCPs. For the purposes of brevity, the term "historic property" is used here to refer to either historic properties, significant sites of religious and/or cultural significance, or TCPs.

## 13. OTHER REQUIRED ANALYSES

In addition to the analyses discussed in the previous state/territory chapters, the National Environmental Policy Act (NEPA) requires an additional evaluation of the potential impacts from the Proposed Action related to unavoidable adverse impacts, any irreversible or irretrievable commitment of resources, and the relationship between local short-term and long-term productivity.

### 13.1. UNAVOIDABLE ADVERSE IMPACTS

The Council on Environmental Quality's (CEQ) NEPA implementing regulations (*40 CFR § 1502.16*) require that an Environmental Impact Statement (EIS) evaluate the unavoidable adverse impacts from implementation of the Proposed Action. For this Proposed Action, the analysis indicates that no significant or unavoidable adverse impacts are anticipated at the programmatic level. Once site-specific project information is known, the potential for adverse impacts would be analyzed, as appropriate, in NEPA documentation tiered from this Final Programmatic EIS (PEIS). Site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work.

### 13.2. IRREVERSIBLE OR IRRETRIEVABLE COMMITMENT OF RESOURCES

CEQ's NEPA implementing regulations (*40 CFR § 1502.16*) require that an EIS review the potential impacts to irreversible or irretrievable commitments of resources resulting from implementation of the Proposed Action. An irreversible commitment of resources refers to the loss of resource use in the future, whereas irretrievable refers to the loss of a natural resource for harvest,<sup>1</sup> production, or use. These resources are irretrievable in that they would be used for a single project instead of being used for multiple purposes. An irretrievable commitment of resources is the loss of resources that cannot be replaced, recovered, or reversed. An example of irreversible commitments of resources could be the loss of a protected species or a cultural resource that would be considered permanent losses. An example of irretrievable commitment of resources could include the use of local contractors during deployment construction activities, during which the contractors supporting FirstNet deployment would be unable to work on other projects, and may cause temporary increases in the cost of local labor, equipment, or materials.

The potential impacts at the programmatic level addressed in each Environmental Consequences section of the preceding chapters were determined based on the resource-specific impact significance criteria developed by FirstNet. As a result, the impact significance ratings<sup>2</sup> of the specific types of effects analyzed in this Final PEIS cannot be directly related to the generalized discussion of irreversible or irretrievable commitments of resources in this section. However, any potential impacts that could create perceptible resource commitments that would be

---

<sup>1</sup> Harvesting is the act or process to take or kill wildlife for food, sport, or population control; to gather crops for consumption.

<sup>2</sup> As discussed in the Environmental Consequences sections, types of effects were rated as *potentially significant, less than significant with BMPs and mitigation measures incorporated, less than significant*, and *no impact* at the programmatic level based on the characteristics of the potential effects. BMPs are best management practices.

irreversible or irretrievable are assumed to result in some level of impact to a particular resource. Potential resource commitments are shown on Table 13.2-1.

**Table 13.2-1: Summary of Irreversible and Irretrievable Commitment of Resources by Resource Area**

| Resource Area                | Irreversible Impacts | Irretrievable Impacts | Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------|----------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Infrastructure               | No                   | No                    | Short-term obstruction or temporary disruption to local infrastructure could occur during construction of deployment activities. There would be no long-term impacts to infrastructure.                                                                                                                                                                                                                                                                                                 |
| Soils                        | Yes                  | Yes                   | If an undisturbed land area is selected for deployment and operation activities, there could be an irreversible resources commitment. Irretrievable impacts could occur if, for example, deployment/construction activities affect a planting or harvesting schedule or crop yields.                                                                                                                                                                                                    |
| Geology                      | Yes                  | Yes                   | Removal or disturbance of paleontological resources (fossils) could potentially create irreversible and irretrievable impacts.                                                                                                                                                                                                                                                                                                                                                          |
| Water Resources and Wetlands | No                   | No                    | Deployment activities are not expected to cause irretrievable loss of existing waterbodies or wetlands, or exceed water quality standards.                                                                                                                                                                                                                                                                                                                                              |
| Biological Resources         | Yes                  | Yes                   | Removal or disturbance of habitat could potentially create minor irreversible and irretrievable impacts.                                                                                                                                                                                                                                                                                                                                                                                |
| Land Use and Recreation      | Yes                  | Yes                   | Land use required for the deployment activities could potentially be a minor irreversible impact. Deployment of buried fiber, for example, could result in minor irretrievable impacts due to temporary loss of land use for other purposes.                                                                                                                                                                                                                                            |
| Visual Resources             | Yes                  | Yes                   | Irreversible and irretrievable impacts associated with obstruction of scenic areas could occur from some angles, and new light sources associated with project activities could impact enjoyment of the night sky.                                                                                                                                                                                                                                                                      |
| Socioeconomic Resources      | No                   | Yes                   | There could be a temporary increase in use of local contractors during construction activities, representing increased employment and an irretrievable loss of workers for other projects during construction.                                                                                                                                                                                                                                                                          |
| Environmental Justice        | No                   | No                    | In general, Environmental Justice impacts across each state or territory would not include irreversible or irretrievable effects. Analyses of individual proposed projects should assess whether potential impacts to specific environmental justice communities include irreversible and/or irretrievable effects. Site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work. |
| Cultural Resources           | Yes                  | Yes                   | Removal or disturbance of previously unidentified cultural resources could potentially result in irretrievable and irreversible impacts.                                                                                                                                                                                                                                                                                                                                                |
| Air Quality                  | No                   | No                    | Project emissions are not expected to exceed federal or state air quality standards. Air quality would return to existing conditions after completion of deployment activities.                                                                                                                                                                                                                                                                                                         |
| Noise and Vibrations         | No                   | Yes                   | Potential short-term, temporary noise impacts may result during construction activities for deployment. There would be no long-term impacts from noise and vibrations.                                                                                                                                                                                                                                                                                                                  |

| Resource Area           | Irreversible Impacts | Irretrievable Impacts | Explanation                                                                                                                                                                                                                               |
|-------------------------|----------------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Climate Change          | No                   | No                    | Greenhouse gas emissions are not expected to be significant at the programmatic level.                                                                                                                                                    |
| Human Health and Safety | No                   | Yes                   | Construction activities during deployment may present relatively minor human health and safety concerns. Any hazardous wastes would be disposed of properly. Conditions would return to normal after completion of deployment activities. |

Where any potential irreversible or irretrievable commitments of resources are identified, they would be addressed in project-specific environmental compliance documentation. Project- or site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work. BMPs and mitigation measures would be implemented where practicable and feasible to help reduce irreversible and irretrievable impacts.

### 13.3. RELATIONSHIP BETWEEN SHORT-TERM AND LONG-TERM PRODUCTIVITY

CEQ's NEPA implementing regulations (*40 CFR § 1502.16*) require that an EIS address the relationship between short-term use of the environment and the potential impacts of such use on the maintenance and enhancement of long-term productivity, particularly for beneficial uses. Such impacts can arise from choosing one action that could reduce the flexibility of pursuing other options in the future, or from selecting a specific parcel of land or other resource to a certain use that would not allow other uses to occur at the site. At the programmatic level, it is anticipated that implementation of the Proposed Action would not result in any impacts that would narrow the range of future beneficial uses of the environment because it would not pose any long-term risks to the health, safety, or the general welfare of public communities and would, in fact, provide significant public welfare benefits in terms of increased public safety and security. Deployment activities would follow, as practicable and feasible, the BMPs and mitigation measures outlined in this Final PEIS, as appropriate.

FirstNet does not intend to alter the current uses of the environment. Project- or site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work. During those analyses, each project element and activity would be evaluated, and the potential long-term effects on productivity of each environmental resource area would be evaluated relative to potential trade-offs.

## 14. DRAFT PEIS PUBLIC COMMENTS

FirstNet has developed a series of five Programmatic Environmental Impact Statements (PEISs) for the Proposed Action, one for each of five geographic regions across the United States (U.S.). This Final PEIS helps fulfill some of FirstNet's responsibilities under the National Environmental Policy Act (NEPA) for the non-contiguous region, which includes the states of Alaska and Hawaii, as well as the Commonwealths of the Northern Mariana Islands and Puerto Rico and the territories of American Samoa, Guam, and the U.S. Virgin Islands. Under the Council on Environmental Quality guidance for public involvement in the NEPA process, agencies shall seek to involve the public in preparing environmental documents such as this PEIS (40 CFR § 1506.6). These efforts include providing notice to potentially interested parties, holding public meetings, soliciting comments, and making both the Draft and Final PEIS available to the public.

This chapter provides a full listing of public and agency comments received on the Draft PEIS for the non-contiguous region as well as FirstNet's responses to those comments (see Table 14-1). In addition, some of the comments received on the other four Draft PEISs for the contiguous U.S. were applicable to the non-contiguous region as well; those comments that were received during the preparation of this document are captured in Table 14-2.<sup>1</sup>

The Draft PEIS for the non-contiguous region was published on March 4, 2016, which initiated a 60-day public comment period (81 FR § 11511 [March 4, 2016]). Notices were also provided directly to cooperating agencies, state/territory Single Points of Contact, elected officials, American Indian tribes and Native Hawaiian Organizations, media organizations, and other interested parties.

Over the course of the comment period, agencies and members of the public were invited to submit comments to FirstNet via traditional mail, e-mail, and the regulations.gov website.<sup>2</sup> In addition, public meetings were held in each of the seven non-contiguous states and territories where participants had the opportunity to talk directly with FirstNet environmental staff and its contractors to learn about the Proposed Action and the preliminary findings of the Draft PEIS. Individuals in attendance could provide input on those findings both verbally and on comment cards. The public meetings were held as follows:

- Anchorage, Alaska, on March 15, 2016
- Juneau, Alaska, on March 17, 2016
- Honolulu, Hawaii, on March 21, 2016
- Tumon Bay, Guam, on April 5, 2016
- Saipan, Northern Mariana Islands, on April 7, 2016
- Tafuna, American Samoa, on April 11, 2016

<sup>1</sup> A summary of comments provided during the scoping period can be found in Appendix B, *First Responder Network Authority Nationwide Public Safety Broadband Network Programmatic Environmental Impact Statement Scoping Summary Report*.

<sup>2</sup> Docket ID: FIRSTNET-2016-0001 (<https://www.regulations.gov/docket?D=FIRSTNET-2016-0001>)

- Christiansted, St. Croix, U.S. Virgin Islands, on April 22, 2016
- San Juan, Puerto Rico, on April 26, 2016

Although the official comment period lasted 60 days, FirstNet also considered comments provided after the closing of that period. There were a total of 20 submissions received on the non-contiguous Draft PEIS, which included 5 comment cards and 5 verbal comments. From those 20 submissions, 171 comments were extracted as identified in Table 14-1 (166 comments from agencies or individuals who identified themselves with agency affiliation and 5 public comments). Agency comments were received from the U.S. Department of Agriculture Natural Resources Conservation Service, U.S. Department of the Interior, U.S. Department of Energy, U.S. Department of Homeland Security, U.S. Environmental Protection Agency, U.S. Coast Guard, American Samoa Department of Homeland Security, State of Hawaii Department of Land and Natural Resources, Puerto Rico Emergency Management Agency, Port Authority of Guam, Guam Department of Homeland Security, and U.S. Virgin Islands Bureau of Information Technology.

Content-related comments received on the non-contiguous region Draft PEIS ranged from simple word changes and reference updates to suggestions for additional analysis. Several comments were site-specific in nature, such as installation methods on the Arctic Coastal Plain in Alaska and the identification of eagle habitats within their known ranges. In addition, numerous commenters on the Draft PEIS indicated that the Final PEIS should describe the environmental review process to be followed after the Final PEIS is published and prior to construction and implementation of the Proposed Action. As indicated throughout this Final PEIS, site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis, but will be issuing a Supplemental Environmental Impact Statement with that information as soon as it is determined.

During the preparation of this document, comments were also received on the other four Draft PEISs for the contiguous U.S. Comments from 13 of these submissions were also applicable to the non-contiguous region (see Table 14-2). These comments included reference and guidance updates, such as the need to remove the 25,000 metric tons of carbon dioxide equivalent reference point from the greenhouse gas and climate change analysis; concerns regarding vibration impacts to natural and cultural resources; suggestions for mitigating potential impacts to migratory birds, such as conducting vegetation clearing outside of breeding periods; and ensuring a detailed review of the best management practices that could avoid or minimize potential impacts of RF emissions to wildlife and humans.

All comments from both Tables 14-1 and 14-2 were used to prepare this Final PEIS.

| FN-NC-0001    | 1              | 2/26/2016        | Michael Robotham | NRCS                   | Based on my preliminary review of the document, I do not see any issues with the finding of “less that significant” impact related to soil resources, including the protection of prime and important farmlands (FPPA), in all the jurisdictions covered by this assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | General                                                                            | NA                                               |
| FN-NC-0001    | 2              | 2/26/2016        | Michael Robotham | NRCS                   | <p>I am somewhat concerned about the decision to use STATSGO2 as the basis for the soils assessments instead of using the more detailed SSURGO data. This may be an issue of consistency since SSURGO is not available for significant portions of Alaska, but, this does result in the use of a less detailed and comprehensive data source in areas where more detailed and comprehensive data (SSURGO) is easily available (Hawaii, Guam, Am Samoa, CNMI, Puerto Rico and USVI) and, at a minimum, this decision should be document and justified in the introductory section.</p> <p>In my opinion, given the scope and effect of the proposed activities, the use of STATSGO2 vs the more detailed SSURGO data does not change the overall conclusions of the assessment at the broad scale. However, it should be explicitly stated (if it is not already and I just missed it) that specific decisions on the selection of alternative and, more specifically on the selection of sites for those alternatives will be based on best available soils information (SSURGO where it exists – STATSGO2 where it doesn’t). In addition, it should be clearly stated that all BMPs to ameliorate potential impacts (e.g. soil erosion during construction activities) will be based on best available soils data and information.</p> | FirstNet used the STATSGO2 database to obtain soils information at the programmatic level to ensure consistency across all the states and territories and the District of Columbia. This regional information provides a sufficient level of detail for a programmatic analysis. Where appropriate, the best available soils data and information, including the use of the SSURGO database, will be used during any subsequent site-specific assessments. This explanation has been provided in the Final PEIS. | General                                                                            | All Soils Affected Environment sections          |
| FN-NC-0001    | 3              | 2/26/2016        | Michael Robotham | NRCS                   | There also are some typos/inconsistencies which I assume will be caught in the editorial process including the following in Volume 3 (American Samoa): Soil Conservation Service. 1982. Soil Survey of the United States Virgin Islands. U.S. Department of Agriculture in cooperation with the Government of American Samoa.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | This error has been corrected in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | General                                                                            | Various                                          |
| FN-NC-0002    | 4              | 4/18/2016        | William Ostrum   | DOE                    | “(See NEPA 1502.20)” - This seems to be referencing the CEQ NEPA regulations, not NEPA. Suggest replacing “NEPA” with “CEQ” for similar references throughout.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The proper reference for this CEQ regulation is <i>40 CFR § 1502.20</i> . References have been corrected throughout the Final PEIS document as appropriate.                                                                                                                                                                                                                                                                                                                                                      | ES1.1, page 1                                                                      | ES1.1                                            |

| FN-NC-0002    | 6              | 4/18/2016        | William Ostrum | DOE                    | Recommend including the title of the preferred alternative in the header.                                                                                                      | The Final PEIS has been updated to make clean distinctions between the Proposed Action and the Preferred Alternative. The Proposed Action is the nationwide broadband network and the Preferred Alternative refers to the specific way the network would be implemented using a combination of technologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ES3.1, page 7                                                                      | Throughout document                                                                                                    |
| FN-NC-0002    | 7              | 4/18/2016        | William Ostrum | DOE                    | Add a brief explanation of the source of the BMPs in general (e.g., BMPs have been developed based on independent research by FirstNet and consultation with other agencies.)  | A footnote has been added to the Executive Summary and the main body text in the Final PEIS stating: “BMPs and mitigation measures have been developed based on consultation with other agencies as well as independent research by FirstNet and their environmental contractors.”                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ES4, page 10                                                                       | ES4; Chapter 11, BMPS and Mitigation Measures                                                                          |
| FN-NC-0002    | 8              | 4/18/2016        | William Ostrum | DOE                    | Bullet 8 - Also coordinate with federal, state, and local government agencies as appropriate.                                                                                  | Bullet 8 referenced in Table ES4-1 has been updated in the Final PEIS to read: “Coordinate with federal, state/territory, and local government agencies as appropriate, as well as with public safety officials, emergency and medical facilities, and existing telecommunications providers to the extent practicable to facilitate awareness of deployment activities and accompanying schedule.”                                                                                                                                                                                                                                                                                                                                                             | Table ES4-1, page 12                                                               | Table ES4-1; Chapter 11, BMPS and Mitigation Measures                                                                  |
| FN-NC-0002    | 9              | 4/18/2016        | William Ostrum | DOE                    | Explain “notification and redundancy.”                                                                                                                                         | A footnote has been added to this text of the Final PEIS stating the following: “In this context, notification refers to the ability of health care providers to be alerted in the event of a disaster. Redundancy refers to the duplication of equipment or processes to help maintain continuity of operations.” This has also been explained in the Infrastructure sections of each state/territory-specific chapters.                                                                                                                                                                                                                                                                                                                                       | ES4.1.6, page 15                                                                   | Infrastructure Affected Environment sections and Environmental Consequences sections; Chapter 1, Introduction; ES4.1.6 |
| FN-NC-0002    | 10             | 4/18/2016        | William Ostrum | DOE                    | Global - unclear when “less than significant with BMPs and mitigation measures” should be used. It seems like impacts could be significant without BMPs in most cases.         | Section ES4 explains that the methodology used to determine the various impact levels in the programmatic analysis is provided for each resource within each state or territory section. The methodology includes developing and applying specific programmatic criteria to determine impact levels. The descriptions of potential impacts to various resources presented in the Executive Summary are summarized. Specific impacts will be evaluated at the site-specific level in subsequent environmental reviews. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. | ES4.2, page 16                                                                     | ES4                                                                                                                    |
| FN-NC-0002    | 11             | 4/18/2016        | William Ostrum | DOE                    | Since prime farmlands are discussed for each other area, add “Alaska has no prime farmlands.”                                                                                  | The Executive Summary of the Final PEIS has been updated to indicate that prime farmland soils are not present in Alaska since soil temperatures do not meet the required threshold established by Congress.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ES4.2.1, page 19                                                                   | ES4.2.1                                                                                                                |
| FN-NC-0002    | 12             | 4/18/2016        | William Ostrum | DOE                    | “It is recommended that...” Recommend removing this phrase throughout the impacts discussion. It is better to say that “FirstNet will, as appropriate and practical, avoid...” | The text in the Final PEIS has been revised to state “As practicable or feasible, FirstNet and/or their partners would work to avoid...”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ES4.3.2, page 25                                                                   | Throughout document                                                                                                    |

| FN-NC-0002    | 13             | 4/18/2016        | William Ostrum | DOE                    | Global - The phrase “in general” could be seen to imply that there are specific effects that could be considered significant. Recommend removing.                                                                                                                                                              | At the programmatic level and using the impact criteria developed for the PEIS, these effects would be considered less than significant. The phrase “in general” has been removed for clarity.                                                                                                                                                                                                                                                                                                                                                                                                                                 | ES4.4.2, page 33                                                                   | Throughout the Executive Summary                              |
| FN-NC-0002    | 14             | 4/18/2016        | William Ostrum | DOE                    | “Consider spanning...” -recommend removing “Consider.”                                                                                                                                                                                                                                                         | This sentence has been updated in the Final PEIS to read: “Where practicable, span a wetland by locating telecommunication poles on either side of the wetland instead of disturbing the interior.”                                                                                                                                                                                                                                                                                                                                                                                                                            | Table ES4-5, page 36                                                               | Table ES4-5; Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0002    | 15             | 4/18/2016        | William Ostrum | DOE                    | In final sentence, insert “impacts” between “and” and “further.” The BMPs wouldn’t reduce deployment (the first half of the sentence) but would reduce impacts.                                                                                                                                                | This text has been updated in the Final PEIS to read: “To the extent practicable or feasible, FirstNet and/or their partners would work to avoid or minimize deployment in wetland areas. Where deployment in wetlands cannot be avoided, mitigation measures, as defined through permitting and/or consultation with the appropriate resource agency, would be implemented to help avoid or reduce potential impacts. Implementation of BMPs, as practicable or feasible, could further reduce the potential for impacts.”                                                                                                    | ES4.5.1, page 39                                                                   | ES4.5.1; ES4.5.2; ES4.5.3; ES4.5.4; ES4.5.5; ES4.5.6; ES4.5.7 |
| FN-NC-0002    | 16             | 4/18/2016        | William Ostrum | DOE                    | Remove “likely” from last sentence.                                                                                                                                                                                                                                                                            | The word “likely” has been removed from this section in the Final PEIS. The sentence now reads: “To the extent practicable or feasible, FirstNet and/or their partners would work to avoid or minimize deployment in wetland areas. Where deployment in wetlands cannot be avoided, mitigation measures, as defined through permitting and/or consultation with the appropriate resource agency, would be implemented to help avoid or reduce potential impacts. Implementation of BMPs, as practicable or feasible, could further reduce the potential for impacts.”                                                          | ES4.5.2, page 39                                                                   | ES4.5.2                                                       |
| FN-NC-0002    | 17             | 4/18/2016        | William Ostrum | DOE                    | Text claims that “activities that involve collocation or shared use of existing facilities or do not require new ground disturbance...would have no effect on biological resources.” Things like lighting and noise could still have an effect. Suggest rewriting to say it is a less than significant effect. | The text in ES4.6 has been updated to better explain the potential development scenarios that could/could not result in potential impacts to biological resources. As described in the Biological Resources sections within each state/territory-specific chapter, collocation or shared use of existing facilities could result in the addition of power units, structural hardening, and physical security measures such as lighting. These activities could impact biological resources, and the text of ES4.6 has been updated to make these distinctions clear, consistent with the text in the state/territory chapters. | ES4.6, page 41                                                                     | ES4.6                                                         |
| FN-NC-0002    | 18             | 4/18/2016        | William Ostrum | DOE                    | Last sentence before bullets - unclear why it claims impacts to “biological resources (including wildlife...” are assessed separately. Isn’t that the focus of this section?                                                                                                                                   | Within the Biological Resources sections (as well as other resource sections) of each state/territory-specific chapter, potential impacts as a result of deployment are assessed separately from operations impacts. This text in ES4.6 has been revised as needed to more clearly convey this point.                                                                                                                                                                                                                                                                                                                          | ES4.6, page 41                                                                     | ES4.6                                                         |

| FN-NC-0002    | 19             | 4/18/2016        | William Ostrum | DOE                    | Include statement that FirstNet “has and will continue to coordinate with appropriate state, local, federal, and tribal agencies.” p 1-7 says FirstNet has already initiated contact with USFWS, but doesn’t mention NOAA/NMFS. Suggest including NOAA if applicable. | Specific planned and on-going consultation efforts are discussed in Section ES1.3 as well as in Chapter 1, Introduction (Section 1.5). Appendix A, <i>Invited Cooperating Agencies</i> , lists those agencies that were invited to become cooperating agencies including NOAA and NMFS. NOAA and NMFS declined to be cooperating agencies for the Programmatic EIS. Within Table ES4-6, there is a BMP/Mitigation Measure related to consultation with USFWS and NMFS.                                                                                                                                                                                                                                                        | ES1.2, page 1                                                                      | NA                                                |
| FN-NC-0002    | 20             | 4/18/2016        | William Ostrum | DOE                    | Remove extra “s” in third to last bullet.                                                                                                                                                                                                                             | The extra “s” has been removed in the third to last bullet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Table ES4-6, page 44                                                               | Table ES4-6                                       |
| FN-NC-0002    | 21             | 4/18/2016        | William Ostrum | DOE                    | “May affect, but is not likely to adversely affect” is the conclusion of a Biological assessment. Has one been completed for this project? If not recommend using different language.                                                                                 | As indicated in footnote b of Table ES4-6, the impact ratings used for Threatened and Endangered Species and Species of Conservation Concern are based on those in the Endangered Species Consultation Handbook (USFWS and NMFS 1998) in order to facilitate impact evaluation under Section 7 of the Endangered Species Act. A Programmatic Biological Assessment has not been completed for the project. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined; however, consultation under Section 7 of the ESA will occur as required. | ES4.6.1, page 51                                                                   | NA                                                |
| FN-NC-0002    | 22             | 4/18/2016        | William Ostrum | DOE                    | Appendix D contains a species list, but it uses older references from secondary sources. Replace with USFWS and NMFS species lists.                                                                                                                                   | As explained in Section 3.1.6.6, Table 1 of Appendix D, <i>Threatened and Endangered Species</i> , is a list of Forest Service and BLM sensitive species only. Table 3.1.6.6-1 lists the federal and state-listed species in Alaska using USFWS and NMFS species lists.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ES4.6.1, page 51                                                                   | NA                                                |
| FN-NC-0002    | 23             | 4/18/2016        | William Ostrum | DOE                    | Recommend removing reference to aurora borealis. It seems out of place given the level of detail provided for dark skies in other locations.                                                                                                                          | Aurora borealis is a unique natural phenomenon found in Alaska more so than other places in the United States, and is therefore an important part of the existing environment. As such, it is appropriate to include it in this discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ES4.8.1, page 62                                                                   | NA                                                |
| FN-NC-0002    | 24             | 4/18/2016        | William Ostrum | DOE                    | Recommend replacing reference (Puerto Rico Tourism Company 2015). Is there a government or academic source for this information?                                                                                                                                      | The reference has been updated using a government or academic source. This change has also made in Section 8.1.8 (others).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ES4.8.6, page 63                                                                   | ES4.8.6; 8.1.8.3; accompanying reference sections |
| FN-NC-0002    | 25             | 4/18/2016        | William Ostrum | DOE                    | Add reference for “studies have shown a minimal impact on property prices.”                                                                                                                                                                                           | This text has been updated in the Final PEIS to be consistent with the text of the state/territory-specific socioeconomic impacts sections. The Bond et al. 2013 reference that is included in the resource section has been added to the Executive Summary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | ES4.9, page 64                                                                     | ES4.9                                             |

| FN-NC-0002    | 26             | 4/18/2016        | William Ostrum | DOE                    | Also reference the previously discussed impacts and BMPs resulting less than significant effects on tourism which is important in many of these areas.                                      | This text has been updated in the Final PEIS to mention tourism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ES4.9, page 64                                                                     | ES4.9                                                                |
| FN-NC-0002    | 27             | 4/18/2016        | William Ostrum | DOE                    | Bullet referring to “subsistence species habitat” may be more appropriate in EJ discussion than socioeconomics.                                                                             | Impacts and related BMPs associated with subsistence practices/resources are addressed in the socioeconomics sections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Table ES4-9, page 65                                                               | NA                                                                   |
| FN-NC-0002    | 28             | 4/18/2016        | William Ostrum | DOE                    | See previous comment regarding discussion of subsistence practices.                                                                                                                         | Impacts and related BMPs associated with subsistence practices/resources are addressed in both the socioeconomics and environmental justice sections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ES4.9.1, page 65                                                                   | NA                                                                   |
| FN-NC-0002    | 29             | 4/18/2016        | William Ostrum | DOE                    | The individual state/territory summaries don’t mention low-income groups, just minority groups. This should be considered in the ratings and discussion.                                    | This section of the text has been modified to include the low-income information that is presented in the environmental justice sections of the state/territory-specific chapters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ES4.10, page 68                                                                    | ES4.10.1; ES4.10.2; ES4.10.3; ES4.10.4; ES4.10.5; ES4.10.6; ES4.10.7 |
| FN-NC-0002    | 30             | 4/18/2016        | William Ostrum | DOE                    | Add “, a racial minority for purposes of this analysis” to the first sentence.                                                                                                              | This text has been updated in the Final PEIS to indicate that the majority of American Samoa’s population is considered a racial minority.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | ES4.10.3, page 71                                                                  | ES4.10.3                                                             |
| FN-NC-0002    | 31             | 4/18/2016        | William Ostrum | DOE                    | Does the rating (3) imply that is effect is expected but that it won’t be an adverse effect? Unclear how “physical damage to and/or destruction of historic properties” can be not adverse. | As explained in the text, the evaluation of potential impacts to cultural resources uses a distinct set of impact categories. A rating of 3, “effect, but not adverse,” is comparable to a rating of “less than significant” at the programmatic level for other resource areas. As discussed in each Cultural Resources section of the Final PEIS, the criterion of “effect, but not adverse” applies for effects to a non-contributing portion of a single or many historic properties. Also, the first effect type in Table ES4-11 has been changed to “Direct effects to historic properties” to be consistent with the main text of the cultural resources sections in the Final PEIS. | Table ES4-11, page 75                                                              | Table ES4-11                                                         |
| FN-NC-0002    | 32             | 4/18/2016        | William Ostrum | DOE                    | In the first sentence, replace “flat areas” with “easily accessible areas.”                                                                                                                 | This sentence has been updated in the various sections of Final PEIS to read: “...cultural resources can be found in coastal areas or inland environments, in relatively flat or easily accessible areas, or in more remote locations, such as those that could be used for ceremonial purposes.”                                                                                                                                                                                                                                                                                                                                                                                           | ES4.11.1, page 77                                                                  | 5.1.11.3; 6.1.11.3; 7.1.11.3; ES4.11.1; ES4.11.2                     |
| FN-NC-0002    | 33             | 4/18/2016        | William Ostrum | DOE                    | Should the second bullet also include Class 1 areas?                                                                                                                                        | The second bullet in Table ES4-12 has been updated to include Class I areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Table ES4-12, page 80                                                              | Table ES4-12; Chapter 11, BMPS and Mitigation Measures               |

| FN-NC-0002    | 43             | 4/18/2016        | William Ostrum | DOE                    | Insert period after “(Hurricane Sandy Rebuilding Taskforce).”                                                                                                                                                                                                    | A period has been added after the second Hurricane Sandy Rebuilding Taskforce reference.                                                                                                                                                                                                | 1.4, page 1-7                                                                      | 1.4                                                               |
| FN-NC-0002    | 44             | 4/18/2016        | William Ostrum | DOE                    | Recommend removing “under NEPA.” This isn’t a comprehensive list of the “primary objectives” of PEISs under NEPA. See 40 CFR § 1502.1 for primary purpose of an EIS.                                                                                             | The discussion in this section has been revised to summarize CEQ guidance for public participation under <i>40 CFR § 1506.6</i> . The discussion of PEIS objectives has been moved to Section 1.2.                                                                                      | 1.7, page 1-8                                                                      | 1.7                                                               |
| FN-NC-0002    | 45             | 4/18/2016        | William Ostrum | DOE                    | Insert “further” between “warranted” and “analysis.”                                                                                                                                                                                                             | At the time of scoping, an initial formal/published analysis had not yet been performed related to identifying alternatives to the Proposed Action. Therefore, the scoping phase would not have identified areas for further analysis, but rather for initial analysis. No change made. | 1.7.1, page 1-9                                                                    | NA                                                                |
| FN-NC-0002    | 46             | 4/18/2016        | William Ostrum | DOE                    | Add a brief statement on how scoping comments were incorporated into the PEIS (e.g., are all of these impacts now discussed in the PEIS).                                                                                                                        | A statement has been added to this text in the Final PEIS to indicate that scoping comments were taken into consideration during the analysis and drafting phase of the Draft PEIS.                                                                                                     | 1.7.2, page 1-10                                                                   | 1.7.2                                                             |
| FN-NC-0002    | 47             | 4/18/2016        | William Ostrum | DOE                    | Recommend including the full ESA definition of take: harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.                                                                                     | The text has been revised to include the full definition of take rather than a summary.                                                                                                                                                                                                 | 1.8.3, page 1-11                                                                   | 1.8.3; 1.8.6; all Biology Affected Environment sections; Glossary |
| FN-NC-0002    | 48             | 4/18/2016        | William Ostrum | DOE                    | Federal agencies must use the best *available* scientific and commercial data. This is an important distinction.                                                                                                                                                 | For clarity, the word “available” has been moved from after the words “commercial data” to before the word “scientific”. The sentence now reads: “...use the best available scientific and commercial data when making an effect determination...”                                      | 1.8.3, page 1-12                                                                   | 1.8.3                                                             |
| FN-NC-0002    | 49             | 4/18/2016        | William Ostrum | DOE                    | May want to change title to Executive Order 11988 (as amended by 13690) - Floodplain Management” and combine with EO 13690. I don’t think it’s appropriate to consider these separately - see comment below on new guidelines.                                   | Sections 1.8.10 and 1.8.14 have been combined in the Final PEIS to explain EOs 11988 and 13690 in the same section. Appendix C, <i>Environmental Laws and Regulations</i> , has also been updated per this comment.                                                                     | 1.8.10, page 1-14                                                                  | 1.8.10; 1.8.14                                                    |
| FN-NC-0002    | 50             | 4/18/2016        | William Ostrum | DOE                    | The guidelines are unclear in first sentence after the bullets. Also, the guidelines were updated in 2015 to reflect EO 13690. Suggest moving the first two sentences of this paragraph to the end and adding “for implementing this EO” after “The guidelines.” | See response to comment 51. The text has been updated in the Final PEIS and the suggested sentence structure change has been made.                                                                                                                                                      | 1.8.10, page 1-14                                                                  | 1.8.10; 1.8.14                                                    |
| FN-NC-0002    | 51             | 4/18/2016        | William Ostrum | DOE                    | Add some discussion of how actions associated with the network will be “federal actions” or “federally funded actions” under EO 13693.                                                                                                                           | A summary description of EO 13693 has been added to Chapter 1, Introduction.                                                                                                                                                                                                            | 1.8.10, page 1-15                                                                  | New Section 1.8.14                                                |

| FN-NC-0002    | 87             | 4/18/2016        | William Ostrum | DOE                    | In the last sentence in the smoking paragraph, replace “compared with” with “than.”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The sentence has been updated in the Final PEIS to read: “In 2013, Alaska had a higher percentage of current smokers (an estimated 22.6 percent, according to the Center for Disease Control’s Behavioral Risk Factor Survey) than the U.S. (19.0 percent, CDC 2013a).”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Page 3.1.15-4                                                                      | 3.1.15; 4.1.15; 5.1.15; 6.1.15; 7.1.15; 8.1.15; 9.1.15    |
| FN-NC-0003    | 88             | 4/21/2016        | Susan Hathaway | DHS                    | Thank you for this advanced read of the FirstNet PEIS. The additional time that you allowed us has greatly benefitted our review and ability to reach out to our components who have extensive and detailed experience in the field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | NA                                                                                 | NA                                                        |
| FN-NC-0003    | 89             | 4/21/2016        | Susan Hathaway | DHS                    | Impact Assessments- The impact assessment sections for all resource areas assume adverse impact with or without BMPs or no impacts. Please specify as such since in some cases increased public safety communication could be perceived as a beneficial positive effect. Particularly in light of the fact that your document makes statements such as “Over the years, numerous lives have been lost as a result of the lack of interoperability in public safety telecommunications in America.” The ultimate outcome of the program is beneficial to human health and safety.                                                                                                                                                                                                                                                                                                    | The Comparison of Alternatives chapter has been updated in the Final PEIS to include a subsection on likely substantial beneficial impacts, particularly related to infrastructure, health and safety, and socioeconomic resources. The Executive Summary also highlights the likely beneficial aspects of the Proposed Action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Executive Summary, Chapter 12 Comparison of Alternatives                           | Executive Summary; Chapter 12, Comparison of Alternatives |
| FN-NC-0003    | 90             | 4/21/2016        | Susan Hathaway | DHS                    | FirstNet also makes the assumption that you will mitigate all significant adverse impacts to a level of not significant but without capturing the details of how or what criteria would be used. FirstNet may be able to provide regional examples or show that you have queried or communicated with agencies that have dealt with site specific tower colocations or mobile units and so on. Though this is programmatic because of the nature of the regional PEIS this information could be gleaned on such a level. In cases that you truly do not know it is difficult for the reader to agree that everything will be mitigated or minimized when you have no specificity to every scenario with corresponding BMP for a situation that is unknown similar to how you stated it in the cumulative effects section. FirstNet would need to wait for a site specific analysis. | The Final PEIS indicates that at the regional, programmatic level, potentially significant impacts are not expected based on the specific impact significance rating criteria developed for each individual resource (which uses a rating system based on magnitude/intensity, geographic extent, and duration/frequency). <sup>3</sup> However, significant impacts could potentially occur at the site-specific level. Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with local environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. The text in the Final PEIS has been revised to indicate that impact determinations are at the programmatic level per the impact significance criteria. | General                                                                            | All Environmental Consequences Introduction sections; ES4 |

<sup>3</sup> Impacts of climate change on the Preferred Alternative could range from potentially significant to less than significant with BMPs and mitigation measures incorporated at the programmatic level.

| FN-NC-0003    | 91             | 4/21/2016        | Susan Hathaway | DHS                    | <b>Protocols for working with agencies to make siting and collocation decisions:</b> While we recognize that planning and decisions regarding siting and collocations will need to be made on a case by case/site by site basis, the EIS does not address the general protocol or role for the cooperating agencies to participate in the FirstNet program. This includes describing, in general, how the program expects their applicants and other agencies to work with FirstNet to ensure that environmental reviews and consultations are conducted for site-level projects. This is a concern because CBP has had at least one Commerce Department grant (a Broadband Technology Opportunity Program- BTOP grant) to a state agency (NM) come across our desks. In that case, they wish to collocate on a BPFTI tower located at the Santa Teresa Land Port of Entry. However, the Commerce grantee is doing all Environmental compliance on their own without anyone signing off at Commerce from what we were able to discover back when the project came to us in Summer 2015. As a result, CBP has been compelled to enter into discussions with Commerce with respect to taking on the consultation burden with some of the resource agencies to cover our NEPA obligations (per Chris Shaw at CBP OCC). Furthermore, CBP needs to ensure that the collocation would not interfere with existing CBP conditions on construction and use of that tower site. To date, that project remains unapproved by CBP and we have not heard back about what role Commerce will be taking or received any of the requested documentation that would allow us to proceed. (Please recall that we mentioned this project issue to you in January 2016.) Without protocols for us to review and comment upon, we can anticipate these same issues of who is responsible for what and how to ensure that FirstNet actions comply with any pre-existing environmental conditions on a DHS or DHS component tower or facility will persist. | The Introduction chapter (Chapter 1) has been updated in the Final PEIS to outline cooperating agency roles, how the program will be coordinated, and a description of the environmental review process going forward, including continued agency and public outreach efforts. For those FirstNet projects that have the potential to affect federal property or facilities, FirstNet or their partner(s), as appropriate, will conduct outreach to the relevant federal agency to help ensure compliance requirements are addressed. | Chapter 1                                                                          | Chapter 1, Introduction                          |

| FN-NC-0003    | 92             | 4/21/2016        | Susan Hathaway | DHS                    | <b>Significance determinations:</b> As written, the document assumes that in all cases every approach for each type of activity will have minimal (mitigated or unmitigated) impacts. It is a concern that this PEIS may actually need to address more remote areas where impacts may approach significance depending on the site-specific case. For instance, what if some FirstNet resources potentially need to consider sites in or adjacent to pristine, protected areas? Or what if a best option in one area could potentially have adverse effects to historic properties? It seems that there should be some discussion of those possibilities. CBP’s towers are not 100% minimal to no impact. If we were to be approached by FirstNet about collocating on a site with restrictions, we would assume that our restrictions would stand for their activities or that they would end up with adverse impacts. So for a CBP helicopter access only site intended to avoid damage to historic properties, a FirstNet access road could not be minimal to no impact. Other towers located in coastal areas have strict requirements about access and maintenance which may elevate collocation on these towers to the level of significance. The document’s failure to better acknowledge the potential circumstances where impacts could arguably approach significance limits its potential usefulness to agencies that would cooperate with the FirstNet program in collocation and co-siting situations in areas with sensitive environmental resources. | The Final PEIS explains that at the programmatic level and based on the impact significance ratings developed, there would be no potentially significant impacts as a result of the Proposed Action as a whole. <sup>4</sup> However, the same impact significance criteria used at the programmatic level may not apply to site-specific build-out activities/actions. The Final PEIS acknowledges that site-specific impacts do have the potential to be more significant on a localized basis and may require site-specific assessments and mitigation. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. The text of the document has been updated to provide examples of circumstances where certain impacts may approach significance. In doing so, the Final PEIS makes clear distinctions between the purpose and usefulness of the PEIS and subsequent analyses (such as Environmental Assessments). For example, while potential impacts from specific FirstNet projects taking place in a wetland may not rise to the level of significance at the programmatic level, such impacts could be considered potentially significant at the site-specific level. | General                                                                            | Throughout Final PEIS, to include all Environmental Consequences Introduction sections |
| FN-NC-0003    | 93             | 4/21/2016        | Susan Hathaway | DHS                    | References/citations that refer to A. Manville most likely belong under US FWS and not his name, similar to what you have done with US DOE, USDA and FCC. Please check this and correct as necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Where government source documents list a specific author(s), the author name is used in the in-text citation and references section. The Manville references refer to a congressional staff briefing presentation (2007), a journal article in the Proceedings of the Fourth International Partners in Flight Conference (2009), and talking points released to the public from a communication tower webinar (2014). Dr. Manville is no longer with the USFWS. No change made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Section 2-5; page 2-24                                                             | NA                                                                                     |
| FN-NC-0003    | 94             | 4/21/2016        | Susan Hathaway | DHS                    | Acronyms are used as references section that don’t the citation that you are referring to. So, despite the fact that you have divided the reference sections to each chapter it may actually be easier to combine all the references. This affects the references and other sections - For example- Under Acronyms you only specify APLIC as the Avian Power Line Interaction Committee and fail to define Alaska Public Lands Information Centers – which is in the references sections therefore it might be easier to combine all references and citations then provide the two uses- e.g. APLIC as APLIC[1] and APLIC[2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The Final PEIS has been updated to ensure there are no conflicts between acronyms used in the text and reference citation acronyms. Where there is a conflict, the citation will use the full name. Where identical acronyms are used in the text, “1” and “2” designations are provided. The Final PEIS text has been updated to use “Alaska Public Lands Information Centers” in the references and citations and not “APLIC”.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | TOC - Acronyms 3.3 and References                                                  | 3.3; 3.1.3                                                                             |

<sup>4</sup> Impacts of climate change on the Preferred Alternative could range from potentially significant to less than significant with BMPs and mitigation measures incorporated at the programmatic level.

| FN-NC-0003    | 95             | 4/21/2016        | Susan Hathaway | DHS                    | <p>Incorrect citation – Please see <a href="https://www.whitehouse.gov/omb/fedreg_1997standards">https://www.whitehouse.gov/omb/fedreg_1997standards</a></p> <p>Change the citation for this simply to include the US Census Bureau or OMB definition – I think this section got confused with a prior section and you intended to reference OMB 1997 not CEQ 1997. CEQ 1997 does not expressly make these definitions. Nonetheless, the reader doesn’t need the basis for the definition they just need the proper definition Suggest “Since publication of the Environmental Justice: Guidance under the National Environmental Policy Act (CEQ 1997), The U.S. Census Bureau has changed how it defines race and ethnicity. Ethnicity (Hispanic or not Hispanic) is now counted defined separate differently from race (US Census, Definitions of Subject Characteristics, 2010; OMB 1997). As a result, this Draft Programmatic Environmental Impact Statement (PEIS) considers both race and ethnicity separately for the purpose of evaluating minority status.” Get the census definition and present it.</p>                                                                          | The suggested edits have been made in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Section 3.1.10.2, page 3.1.10-2                                                    | All Environmental Justice Affected Environment sections |
| FN-NC-0003    | 96             | 4/21/2016        | Susan Hathaway | DHS                    | <p><b>BMPs:</b> As a cooperating agency who at some time may have to work with FirstNet on deployment of technologies on our structures (or otherwise), DHS and its components should do a thorough and detailed review of the FirstNet BMPs to make sure that they do not conflict with existing DHS and component BMPs and MOUs which are specifically designed to prevent constraints to DHS and component technologies and missions. For example: There is a BMP for building new FirstNet towers that says: “Select the shortest possible structures necessary to meet the FirstNet system’s needs, and only deploy towers less than 200 feet in height.” It is fine as a goal, but (1) is it efficacious in every situation and (2) might it limit opportunities for collocations in certain circumstances (i.e. If one over 200’ tower may be able to service a remote area as opposed to using multiple less than 200’ towers to cover the same area, it should be an option for consideration)? Due to the volume of BMPs in the document and the apparent conflicting nature of some of the proposed BMPs, this will require a significant amount of time and agency resources.</p> | Unlike mitigation measures, BMPs are not required in every case and will be applied as practicable and feasible. FirstNet will continue to coordinate with DHS as a cooperating agency. Application of BMPs will be determined on a case-by-case basis. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. Additionally, some of FirstNet’s BMPs were developed through consultation with resource managing agencies. | Chapter 11 BMPs and Mitigation Measures                                            | Chapter 11, BMPS and Mitigation Measures                |

| FN-NC-0003    | 98             | 4/21/2016        | Susan Hathaway | DHS                    | How would the installation of the system be documented and reference the PEIS criteria that apply? For instance, is there some kind of numbering scale (numbering or color coding) that could be associated with the potential impacts? That way, when the tiered analysis is being completed for the site-specific project, the appropriate reference could be made in the PEIS to address the type.     | The Draft and Final PEIS use four categories of potential impacts to rank the types of effects that may be anticipated at the programmatic level: 1) Potentially significant; 2) Less than significant with BMPs and mitigation measures incorporated; 3) Less than significant; and 4) No impact. As explained in the response to comment 92 above, the same impact significance criteria used at the programmatic level may not apply to all site-specific actions, and site-specific environmental analysis may be performed that describe potential impacts and mitigation measures at the local level. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. To the extent practicable, however, site-specific analyses will refer to and tier off of the appropriate discussions in the Final PEIS and will incorporate the applicable impact ratings and BMPs/mitigation measures from the Final PEIS. However, since the geographic extent, magnitude/intensity, and duration/frequency of some impacts may be different at the local level than at the programmatic level, site-specific impact rankings and additional BMPs/mitigation measures may be developed during these subsequent analyses. | Potential Impacts                                                                  | Throughout Final PEIS, to include all Environmental Consequences Introduction sections |
| FN-NC-0003    | 99             | 4/21/2016        | Susan Hathaway | DHS                    | The cumulative impacts section specifically states that a cumulative impact results from the additive effect of all projects in the same geographical area; however, no linkage is then made as to why you have singled-out examples of Broadband projects. Please provide rationale or re-word what you have so that reader can make sense of providing only one subset of potential cumulative impacts. | As explained in the Final PEIS, at the programmatic level it is not practical to include a list of all possible infrastructure projects in the cumulative impacts section. Instead, the cumulative impacts section describes projects similar to the Proposed Action with common impacts that would likely have additive effects. The text points out that specific project sites have not yet been identified by FirstNet, and that there is currently a wide range of potential technologies that could be implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Table 10-1                                                                         | NA                                                                                     |

| FN-NC-0003    | 100            | 4/21/2016        | Susan Hathaway | DHS                    | <p>Given DHS above comments on impacts and BMPs it is difficult to see the analysis behind such broad statements as – “The potential impacts associated with the Proposed Action would result from the collocation on existing infrastructure; construction of new infrastructure and/or accessory components; use of existing fiber facilities; installation of new conduit; deployment of satellite phones and/or satellite technology; installation of microwave facilities; and utilization of deployable technologies. As described in Chapters 3 through 9, the effects as a result of the Proposed Action would not result in significant potential impacts.”</p> <p>And</p> <p>“Impacts would occur as a result of other ongoing telecommunications infrastructure development, including those projects described above; however, when combined with the potential impacts associated with the Proposed Action, significant impacts to the natural or human environment are not expected.”</p> <p>Cumulative impacts would include projects that FirstNet has no control over so these statements seem over-generalized and lack a reasonable written logic train to guide the reader to come to such a conclusion. DHS is familiar with situations along the border and in remote locations where this seems difficult to be certain and even more difficult to ensure/enforce.</p> | See the responses to comments 92 and 99. The FEIS recognizes that impacts could occur as a result of other ongoing telecommunications infrastructure development. However, when combined with the potential impacts associated with the Proposed Action, incremental significant impacts to the natural or human environment are not expected to be significant at the programmatic level.                                                                                                                      | Section 10 Cumulative, page 10-3                                                   | Throughout Final PEIS, to include all Environmental Consequences Introduction sections |
| FN-NC-0004    | 101            | 3/14/2016        | Anonymous      | Not specified          | The document refers to State Civil Defense which is a division of the State of Hawaii Dept. of Defense. The name was changed to Hawaii Emergency Management Agency (HI-EMA) in 2014; HI-EMA is now the accepted name for that entity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The Final PEIS includes the correct reference to HI-EMA.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Section 4                                                                          | Hawaii Introduction; 4.1.1.2; 4.1.1.4                                                  |

| FN-NC-0008    | 105            | 4/11/2016        | Carl Prendergast  | ASDHS                  | I am concerned that FirstNet will have negative impacts to existing local broadband companies like ASTLA (American Samoa Telecommunications Authority) or BlueSky Communications. The surplus bandwidth from FirstNet could cause loss of local jobs since these two companies employ many local people.                                                                                                        | The Final PEIS addresses this comment related to competition and potential job loss or dislocations in the socioeconomics impact sections within each state/territory chapter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | General                                                                            | All Socioeconomics Environmental Consequences sections                                                        |
| FN-NC-0009    | 106            | 4/22/2016        | Kenneth Duinkerck | -                      | FirstNet should use renewable energy for backup power in the Virgin Islands (cell towers, for example).                                                                                                                                                                                                                                                                                                         | The Final PEIS addresses the potential use of renewable energy in the Climate Change sections of each state/territory chapter, as well as in the BMPs and Mitigation Measures chapter (Chapter 11). A BMP in Chapter 11 states that FirstNet and/or their partners would use, as practicable or feasible, engines certified to the lowest emission standards and engines that burn alternative fuels (e.g., natural gas, biofuels). A BMP also states that FirstNet and/or their partners would use vehicles with hybrid or electric technology, as practicable or feasible, to reduce or eliminate criteria pollutant emissions from fuel combustion. | General                                                                            | All Climate Change sections;<br>Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0010    | 107            | 4/26/2016        | Ruth E. Silva     | PREMA                  | It’s important to take into consideration that there are three important species that are very loved by the island: the Puerto Rican parrot, manatees, and the coqui.                                                                                                                                                                                                                                           | The Final PEIS addresses potential impacts to wildlife and threatened and endangered species in Puerto Rico in sections 8.2.6.4, 8.2.6.6, and 8.1.6.4. Each of these species is specifically included in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                               | General                                                                            | NA                                                                                                            |
| FN-NC-0011    | 108            | 3/21/2016        | Victoria Garcia   | HI-DOD                 | (verbal comment) FirstNet should focus more effort on coordinating with other agencies in Hawaii, including Native Hawaiian Organizations, to educate them about the project in general, as well as to inform them about the environmental review process and potential environmental impacts. She suggested that FirstNet could better integrate the environmental review process into overall outreach plans. | Thank you for your comment. A Supplemental Programmatic Environmental Impact Statement will be developed that outlines the site-specific process. As discussed in the Final PEIS, FirstNet has initiated consultation with Native Hawaiian Organizations.                                                                                                                                                                                                                                                                                                                                                                                              | NA                                                                                 | NA                                                                                                            |
| FN-NC-0012    | 109            | 4/5/2016         | Leigh Pereda      | Guam DHS               | (verbal comment) FirstNet should make sure that the report is double-checked for typos. A typo was found in the Executive Summary where the text incorrectly referred to the people from Guam as Native Hawaiians.                                                                                                                                                                                              | The Final PEIS has been checked for typos and inconsistencies through a rigorous review and editing process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | General                                                                            | Various                                                                                                       |
| FN-NC-0013    | 110            | 4/5/2016         | Chris Roberto     | Port Authority of Guam | (verbal comment) Regarding infrastructure resiliency in Guam, the FirstNet project should be structurally resilient and should take into account the potential for insect damage (such as from termites).                                                                                                                                                                                                       | The Description of the Proposed Action and Alternatives chapter (Chapter 2) addresses resiliency issues related to the NPSBN. The Infrastructure section within each state/territory chapter discusses infrastructure resiliency as well. Resiliency is discussed as a broad category of natural and man-made disasters and does not go into specifics at the programmatic level.                                                                                                                                                                                                                                                                      | Section 6.1.1;<br>Section 6.2.1                                                    | NA                                                                                                            |
| FN-NC-0014    | 111            | 4/11/2016        | Unknown           | Unknown                | (verbal comment) The PEIS should take into account emissions associated with generator use both during construction and during operation, for example, if back-up generators would be used to supply power to cell tower sites.                                                                                                                                                                                 | The PEIS discusses potential impacts related to air emissions and generator use in the air quality section within each state/territory-specific chapter. Additionally, BMPs and Mitigation measures are included in Chapter 11 to help avoid or minimize potential impacts to air quality. For example, FirstNet will use, as practicable or feasible, engines certified to the lowest emission standards and engines that burn alternative fuels (e.g., natural gas, biofuels).                                                                                                                                                                       | General                                                                            | Chapter 11, BMPS and Mitigation Measures                                                                      |

| Submission ID | Comment Number | Date(s) Received | Sender Name(s)       | Sender Organization(s)                               | Comment Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Chapter/Section/Page Number Reference in the Draft PEIS as Identified by Commenter | Section(s) where changes were made in Final PEIS |

| FN-NC-0015    | 112            | 4/11/2016        | Unknown              | Unknown                                              | (verbal comment) Not all historic places are included in the National Register of Historic Places, and that this should be taken into account during the planning and development stages of the project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The cultural resources sections within each state/territory-specific chapter address historic places. The Final PEIS indicates that cultural resources surveys might need to be conducted to identify specific cultural resources of an individual project; however, through previous surveys and a general understanding of the cultural context, archaeological sites and historic resources are more typically found in certain locations given their size, type, and function.                                                                                                  | General                                                                            | All Cultural Environmental Consequences sections |
| FN-NC-0016    | 113            | 4/22/2016        | Reuben D. Molloy     | U.S. Virgin Islands Bureau of Information Technology | <p>(verbal comment) Some of the challenges in St. Croix related to the telecommunications infrastructure for first responders include:</p> <ul style="list-style-type: none"><li>• Coverage - 20% of St. Croix is a “dead-spot.” Even the radios of first responders are not useable in these areas.</li><li>• Congestion on the network is a major issue – too many users with not enough bandwidth.</li><li>• Redundancy – there are redundant 911 call centers in St. Thomas and St. Croix, but the LMR radios in the two locations are not interoperable so they cannot communicate after a call is made.</li><li>• Training – not all users of the system and radios are properly trained.</li></ul> <p>Also, cell tower “fall-zones” are an issue of concern on St. Croix. A moratorium for building tall towers near existing structures has been recently lifted, but the new regulations make constructing tall towers difficult. Collapsible towers should be explored. The importance of resilient infrastructure to withstand hurricanes is stressed.</p> | Technical information related to the deployment has been communicated to the relevant FirstNet personnel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | General                                                                            | NA                                               |
| FN-NC-0017    | 114            | 4/25/2016        | Mary Josie Blanchard | US DOI                                               | <p>First paragraph, last sentence: The reference to sparse feeding opportunities is an incorrect categorization of habitats in Alaska. Birds migrate to breed in Arctic and sub-Arctic habitats in part because of the abundance of food resources (especially invertebrates) during the short summer season at these latitudes. However, habitat fragmentation is a source of impact to birds through the direct loss of habitat important to critical life stages, including nesting, brood rearing, and refueling (after and before long migratory flights and/or reproduction, which has high energy demands). Activities during construction can also result in indirect impacts to birds (through disturbance) during sensitive life stages. Recommend correcting as appropriate.</p> <p>Second paragraph: Activities onshore can in some circumstances disturb or displace Alaskan marine mammals as well (e.g. near terrestrial haulout locations, near polar bear dens).</p>                                                                                 | <p>The Final PEIS has been updated and no longer indicates relatively sparse feeding opportunities for birds. The final sentence of section 4.6.1 now reads: “Habitat fragmentation could also potentially affect birds through the loss of nesting, brood rearing, and feeding after and before long migratory flights and/or reproduction.”</p> <p>A sentence has been added to the second paragraph of section ES4.6.1 that reads: “Marine mammals could also be affected by project activities onshore if done near terrestrial haulout locations or near polar bear dens.”</p> | Executive Summary ES4.6.1, page ES-51                                              | ES4.6.1                                          |

| Submission ID | Comment Number | Date(s) Received | Sender Name(s)       | Sender Organization(s) | Comment Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Chapter/Section/Page Number Reference in the Draft PEIS as Identified by Commenter | Section(s) where changes were made in Final PEIS             |

| FN-NC-0017    | 115            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Alaska presents unique challenges to certain ground-disturbing activities proposed under the Project’s preferred alternative, due to the presence of permafrost-rich soils across much of the landscape. On the Arctic Coastal Plain (ACP) especially, trenching in frozen saturated soils characteristic of this region of continuous permafrost often results in thermokarsting. This can in turn lead to trench subsidence. Subsidence of linear features has been known to drain adjacent wetlands, altering local hydrology and habitat and creating long-term maintenance issues. For example, subsidence and subsequent flooding of power cables buried in the tundra in a Prudhoe Bay oil field in the 1990s continued to be a problem well into the late 2000s, in spite of the routine placement of fill, which is expensive and not widely available in this region. We strongly recommend the Project consider alternatives to trenching for placement of fiber optic cable and other transmission lines on the ACP, include hanging wires on existing pipeline vertical support members, burial in existing roadways, and co-location with other transmission lines or other existing infrastructure (e.g., oil and gas pipelines). | Section 3.1.3 of the Draft PEIS indicated that thawing permafrost in Alaska can lead to land subsidence. The Final PEIS has been updated to elaborate on thermokarst and specifically calls out the Arctic Coastal Plain. Specific installation methods will be determined at the site-specific level or during project design phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | General                                                                            | 3.1.3; 3.2.3; 3.2.5 Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0017    | 116            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Volume 6, Chapter 8 covers Puerto Rico and Volume 7, Chapter 9 covers the U.S. Virgin Islands. Alternatives include the use of existing or the construction of new wireless communication towers. Based on the information in the DPEIS, the use of towers to maintain a communications infrastructure in Puerto Rico and the U.S. Virgin Islands after a natural disaster such as a hurricane would be difficult. Hurricane force winds can knock down towers or misalign or dislocate antennae. Electrical power is usually cut to preserve the existing grid prior to a Hurricane or Tropical Storm, and power might not be re-established until downed lines are corrected. Under these circumstances, tower facilities would depend exclusively on their existing generators and fuel supplies. This makes tower communications after a tropical weather emergency difficult at best.                                                                                                                                                                                                                                                                                                                                                       | No change made. The Draft and Final PEIS indicate that the FirstNet network would be “hardened” from the physical, user access, and cyber security perspectives to be more resilient to impacts from natural and manmade disasters. Hardening refers to a variety of methods that may be used to make a structure more resistant to failure, whether through physical reinforcement of a structure, redundant sources of emergency power, or additional firewalls and cybersecurity. These efforts would be designed not only to ensure that the network has greater resistance to system failure than what is currently available, but also that it can recover more rapidly should failure occur at any point in the system. The goal would be to provide not only interoperability, but also improved operability in the event of a natural or manmade disaster. | General                                                                            | NA                                                           |

| FN-NC-0017    | 119            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Bald and Golden Eagle Protection Act: Suggest acknowledging somewhere in this section that both Bald and Golden Eagles are federally managed through the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA). Also important to note, for projects taking place within eagles’ preferred habitat within their known ranges, the project proponent should contact the FWS to ensure compliance with BGEPA. Please add language that legal take must be authorized through a FWS permitting process. | This section of the Final PEIS has been updated to reflect that both Bald and Golden Eagles are also federally managed under the MBTA (in addition to the BGEPA). FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. Language has also been added indicating that legal take must be authorized through a USFWS permitting process. Site-specific reviews will be performed and consultation with USFWS where required will be conducted. | Chapter 3 - Alaska<br>3.1.6.4 Wildlife, page 3.1.6-12                              | All Wildlife Affected Environment sections       |
| FN-NC-0017    | 120            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | In the paragraph that continues from page 3.1.6-13, marine mammals should not be discussed. This text all falls under the header Terrestrial Habitats and Wildlife. Recommend making it clear in this paragraph that this section applies to species that are generally state-managed (according to the regions shown on Figure 3.1.6.4-1).                                                                                                                                                                                          | The mention of marine mammals in the introductory paragraph of this section has been removed in the Final PEIS. Text has been modified to indicate that the section discusses state-managed terrestrial habitats and wildlife.                                                                                                                                                                                                                                                                                                                                                                                                   | Chapter 3 - Alaska<br>3.1.6.4 Terrestrial Habitats and Wildlife, page 3.1.6-14     | 3.1.6.4                                          |
| FN-NC-0017    | 121            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Recommend making it clear in the introductory paragraph; this section applies to species that are generally federally-managed, through either NMFS or the FWS.<br><br>Beaufort and Chukchi Seas: There are Pacific walrus haulouts in the Chukchi Sea, in addition to those mentioned farther south.<br><br>Gulf of Alaska and Southeast: Please state the listed species that will be discussed in section 3.1.6.6, as you have for previous sections.                                                                              | The introductory paragraph of this section has been updated to indicate that the section applies to species that are generally federal-managed. In addition, the text notes that there are Pacific walrus haulouts in the Chukchi Sea. The text indicates that the North Pacific right whale is discussed in Section 3.1.6.6.                                                                                                                                                                                                                                                                                                    | Chapter 3 - Alaska<br>3.1.6.4 Habitats and Marine Mammals<br>3.1.6-22              | 3.1.6.4                                          |
| FN-NC-0017    | 122            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Pacific Walrus: The Pacific walrus is a candidate species under the ESA, so it should be discussed in Section 3.1.6.6. (Same comment applies to NMFS candidate species, such as the bearded seal). Walrus are known to stampede from terrestrial haulouts as well as ice floes; and this should be discussed, as it might be a more relevant concern to the FirstNet project, which has more of an onshore or nearshore footprint than an offshore component.                                                                        | The Pacific walrus and bearded seal discussion were left in Section 3.1.6.4 as the wildlife chapter goes into more detail regarding haulouts as they relate to specific species. A cross reference was added for Section 3.1.6.6 where these species are already included in a briefer discussion, within Table 3.1.6.6-1. Detail was also added to walrus discussion regarding stampeding.                                                                                                                                                                                                                                      | Chapter 3 - Alaska<br>3.1.6.4 Habitats and Marine Mammals, page 3.1.6-23           | 3.1.6.4                                          |
| FN-NC-0017    | 123            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Recommend using the FWS’s Birds of Conservation Concern list ( <a href="http://www.fws.gov/migratorybirds/pdf/grants/BirdsofConservationConcern2008.pdf">http://www.fws.gov/migratorybirds/pdf/grants/BirdsofConservationConcern2008.pdf</a> ) to help identify which birds in this category fall within which Bird Conservation Regions (BCR). Because the list is older than some of your references, those should not be replaced; however, this one should be added because it is the most recent, official list from the FWS.   | Information from the referenced 2008 USFWS Birds of Conservation Concern document has been added to the Final PEIS to supplement information provided in the Draft PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Chapter 3 - Alaska<br>3.1.6.4 Habitats and Birds, page 3.1.6-26                    | All Wildlife Affected Environment sections       |
| FN-NC-0017    | 124            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Aleutian and Bering Sea Islands: Short-tailed albatross could range into this BCR, as well as both listed eiders. Even if these are discussed in a later section, recommend including that fact here (where the BCRs are the focus). Same comment applies to other BCRs, as appropriate.                                                                                                                                                                                                                                             | A mention of the short-tailed albatross and eiders has been included in this section of the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Chapter 3 - Alaska<br>3.1.6.4 Habitats and Birds, page 3.1.6-26                    | 3.1.6.4                                          |

| FN-NC-0017    | 131            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Short-tailed Albatross: Please fix the description under geographic range (some missing words make this hard to follow). Also, this species has been found as far north as the Chukchi Sea in recent years. Their range might be expanding.</p> <p>Eskimo Curlew: Species status can be changed to “probably extinct”.</p> <p>Eiders: Please include non-breeding habitats for both eiders under general habitat description.</p> <p>Yellow-billed Loon: Can be removed from this table. It was found not warranted for listing.</p> <p>Polar bear: This section needs some substantial edits. Polar bears are not migratory; they are found in Alaska year-round (including denning bears, which are increasingly using the terrestrial environment). Their habitat and geographic range both need to be updated to reflect their use of the terrestrial environment.</p> <p>Pacific Walrus: Please update this table to reflect walrus use of terrestrial haulouts.</p> | The applicable sections have been revised as appropriate.                                                                                                                                                                                                                                                                                                                                                | Chapter 3 - Alaska<br>3.1.6.6 Threatened and Endangered Species, Table 3.1.6.6-1   | 3.1.6.6                                                               |
| FN-NC-0017    | 132            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | The descriptions of Critical Habitat for Spectacled and Steller’s Eiders as described in the text on this page are not accurate. Please go back to the listing and correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | These descriptions have been modified in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                 | Chapter 3 - Alaska<br>3.1.6.6 Threatened and Endangered Species, page 3.1.6-57     | 3.1.6.6                                                               |
| FN-NC-0017    | 133            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | It is hard to see the terrestrial eider habitat delineated on this map. Please check for accuracy and consider renaming the yellow polygons CH for Steller’s AND spectacled eiders, and add the little sliver of spectacled eider-only CH south of Toksook Bay in another color. (See attached Figure 1: “Listed Critical Eider Habitat in YKD in FWS’s comment letter).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | This map in the Final PEIS has been updated to make the distinctions clear.                                                                                                                                                                                                                                                                                                                              | Chapter 3 - Alaska<br>3.1.6.6 Threatened and Endangered Species, Figure 3.1.6.6-1  | Figure 3.1.6.6-1                                                      |
| FN-NC-0017    | 134            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | In the sentence, “If a disturbance such as noise... excluded marine mammals from a preferred sea ice haulout,” please change this just to “haulout.” Walrus are using terrestrial haulouts more and more. Even if they are not preferred, these haulouts are important to their life history with loss of sea ice; additionally, walrus using terrestrial haulouts might be more likely than those using sea ice haulouts to be impacted by the FirstNet project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | In addition to sea ice haulouts, terrestrial haulouts were added to the document.                                                                                                                                                                                                                                                                                                                        | Chapter 3 - Alaska<br>3.1.6.6 Threatened and Endangered Species, page 3.1.6-59     | 3.1.6.6; 3.2.6.6                                                      |
| FN-NC-0017    | 135            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | It is not clear whether Section 3.2.6.4 applies to only non-listed species, or whether it includes listed species. Assuming the former, the information about Pacific Walrus (pages 3.2.6-17, 3.2.6-20, 3.2.6-22 through 23) should be removed from this section and placed in Section 3.2.6.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Section numbers have been added to the descriptions of the sections listed in Section 3.2.6.1 to make it clear where the various biological resources are covered within the larger section 3.2.6. The discussion of the Pacific Walrus was left in Section 3.2.6.4, where detailed species discussions are presented, and a cross reference to the threatened and endangered species section was added. | Chapter 3 - Alaska<br>3.2.6.4 Wildlife, page 3.2.6-16                              | All Biology<br>Environmental<br>Consequences<br>Introduction sections |

| FN-NC-0017    | 136            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Direct Injury/Mortality: Collision events can occur to many species that do not necessarily fall in these categories, caused by weather events or poor visibility. Consider adding the bird family of alcids to the list of poor fliers and loons to the list of heavy birds. Note the mitigation measures and BMPs presented in Chapter 11 are general and not project-specific. The FWS would like the opportunity to collaborate early in the development of specific projects to help ensure impacts to migratory birds and ESA-listed species are avoided and minimized throughout the project siting, design, and operation stages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Alcids and loons have been added as additional examples as suggested. Additionally, FirstNet intends to fully adhere to its compliance requirements under Section 7 of the ESA, and site-specific reviews will be performed and consultation where required will be conducted. | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-18                                 | All Wildlife Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0017    | 137            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Vegetation and Habitat Loss Alteration, or Fragmentation: For a discussion about impacts from vegetation clearing, snow geese are not the best example to use. Snow geese are increasing in the western Arctic. In the eastern Arctic, they have displaced other birds through over grazing on grass and sedge tundra habitats. The statement that feeding habitats are limited is misleading. Not all feeding habitats are limited, although some (lagoons, mudflats) might be. Vegetation clearing in molting areas would be a concern because flightless birds do need access to high quality forage within their immediate vicinity. Brant molting and feeding at Teshekpuk Lake are a good example of this.</p> <p>In the last paragraph, recommend listing what factors would influence the degree to which habitat exclusion affects birds (e.g., life history and behavior of the species, stage of the annual cycle being affected, habitat type limited or not). Here, passerines are listed as one bird group for which construction activities might only have minor, short-term effects. Loons would be a good example of the other end of the spectrum (solitary nesters), as would seabirds (colony nesters). The shorebird example used here is also good.</p> | The examples provided in the Final PEIS have been updated as suggested. Additionally, the last paragraph of this section has been updated to describe the factors that would influence the degree to which habitat exclusion affects various bird groups.                      | Chapter 3 - Alaska<br>3.2.6.4 Birds, pages 3.2.6-20 to 21                          | 3.2.6.4                                                                                    |
| FN-NC-0017    | 138            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | The Alaska region of the FWS is in the process of updating recommendations for time periods to avoid vegetation clearing/land disturbing activities. The Project should refer to the most recent version of this document available prior to commencing construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The text of this section has been updated to refer to the most recent versions of published materials related to avoidance periods for vegetation clearing.                                                                                                                    | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-20                                 | 3.2.6.4                                                                                    |
| FN-NC-0017    | 139            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Indirect Injury/Mortality: What are the lowland and upland waders species referred to in the first paragraph under birds? This category of bird sometimes means shorebirds, or it might mean marsh birds (herons, egrets). Recommend clarification. FWS doesn't have any of the latter here, and the former were already listed in this sentence. Please also add some discussion here about increased predation on birds and/or their nests, with citations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | This text has been revised in the Final PEIS to provide necessary clarification. The text regarding increased predation has been removed.                                                                                                                                      | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-23                                 | 3.2.6.4                                                                                    |

| FN-NC-0017    | 140            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Effects to Migration or Migratory Patterns: Shorebirds migrating long distances are not just using Australian non-breeding areas. These birds are flying to Australia, Asia, and to North, Central, and South America non-breeding locations. Additionally, some seabirds are making these long-distance movements (terns may fly all the way to Antarctica), and so are some passerines (e.g. the Northern Wheatear, which winters in Africa).</p> <p>If one of the important, discrete stopover areas is impacted by construction permanently, there might be important consequences to a species or even a population. Temporary impacts could result in displacement from preferred stopover habitat, affecting quality and quantity of food resources, refueling rates, and possibly fitness of individual birds (with the potential to impact survival and therefore have population level consequences).</p> | <p>The examples provided in the Draft PEIS were not intended to be inclusive of all migrating birds. Text has been added in the Final PEIS to provide more information related to the range and distances of migrating bird groups. In addition, project BMPs (see Chapter 11, BMPS and Mitigation Measures) incorporate USFWS BMPs and mitigation measures, including the avoidance of sensitive areas such as known bird concentration areas and known migratory flyways.</p>                                                                                                                                                                                                                                                                   | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-25                                 | All Wildlife Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0017    | 141            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Reproductive Effects: In addition to disturbance or displacement, young birds and eggs could be susceptible to direct impacts from construction activities (e.g. crushing of nests during construction of gravel pads). This could be mitigated by using appropriate construction timing windows (e.g. winter construction).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>Direct impacts to nests during construction have been added under the Direct Injury/Mortality subsection. The use of construction timing windows can be an effective mitigation measure for avoiding and minimizing adverse reproductive effects. At the programmatic level the project covers a wide geographic range and currently lacks project-specific detail. As such, determining the feasibility and effectiveness of this BMP will be done as part of subsequent site-specific reviews. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined.</p> | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-27                                 | All Wildlife Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0017    | 142            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Invasive Species Effects: Would any of the equipment or supplies for the proposed action be delivered via waterways? If so, there is potential to bring invasive species along on boat hulls and/or in ballast water. This would be one way of having large impacts to the marine ecosystem. Recommend clarification.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>No change made. The Draft and Final PEIS indicate that such invasive species effects to marine ecosystems are possible but not likely to be significant given the short duration of construction activities in limited near-shore locations. The project would not involve significant marine deployment activities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                       | Chapter 3 - Alaska<br>3.2.6.4 Marine Mammals, page 3.2.6-29                        | NA                                                                                         |
| FN-NC-0017    | 143            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Invasive Species Effects: In addition to seabirds, rats could impact any ground-nesting birds (waterfowl, cranes, shorebirds, tundra-nesting passerines). However there are laws against transporting rats in the State of Alaska, so activities for the Proposed Action should not increase risk to birds (as long as mitigation measures and BMPs are followed).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>No change made.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-29                                 | NA                                                                                         |

| FN-NC-0017    | 144            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | If “deployment” (as described on 3.2.6-31) means construction, then is this section dealing with both temporary and permanent impacts? This is somewhat unclear, but the following comment assumes that is the case. Where potential impacts to birds are described, it is not correct to say that impacts to Alaska’s birds are anticipated to be less than significant. Impacts from infrastructure built under the Proposed Action could range from less than significant to significant at the population or species level, depending on placement, design, operation, and maintenance of the infrastructure. The FWS would like to be involved in site-specific placement, design, and operation as early as possible in the planning stages of individual projects, in order to help avoid and minimize impacts to birds. Also, as a side note, these international migrants should probably not be called “Alaska’s birds.” | The Final PEIS indicates that at the regional, programmatic level, potentially significant impacts are not expected based on the specific impact significance rating criteria developed for each individual resource (which uses a rating system based on magnitude/intensity, geographic extent, and duration/frequency). <sup>5</sup> However, significant impacts could potentially occur at the site-specific level, although with BMPs and mitigation measures this is expected to be rare. Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with local environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. The text in the Final PEIS has been revised to indicate that impact determinations are at the programmatic level per the impact significance criteria. | Chapter 3 - Alaska<br>3.2.6.4 Birds, page 3.2.6-34                                    | All Wildlife Environmental Consequences sections                  |

| FN-NC-0017    | 148            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>Recommend including timing windows as one way to avoid impacts to nests, eggs, and young birds. In the first paragraph, it is not accurate to say that injury or death from deployment of equipment is unlikely. Young birds and nests might be most susceptible to ground disturbing-activities (e.g. gravel pad construction during nesting season), but adult birds are susceptible to collision (as discussed in the next paragraph).</p> <p>Make the collision paragraph listed-species specific, as other species are discussed earlier in this document. It is not appropriate to talk about swans, cranes, eagles, hawks, osprey, or owls here. We also don’t have herons or egrets in Alaska. All of this language (excluding the discussion on herons and egrets) can be moved into the earlier section, where non-listed birds are discussed.</p> <p>It is not necessary to single the Eskimo Curlew out in this discussion. First, that species is likely extinct; but perhaps more pertinent to this discussion, it (just like any other bird) could be at risk of collision under certain conditions.</p> | Regarding timing windows, see response to Comment 141 above. The text has been modified in the Final PEIS to indicate that potential impacts to adult birds are unlikely from equipment deployment. Additional revisions have been made to the text to clarify the types of species potentially affected by collision impacts, such as large wing-span birds, heavy birds, and those that fly in flocks. Non-listed species are discussed in the Wildlife section. | Chapter 3 - Alaska Threatened and Endangered Species/Birds, page 3.2.6-60          | All Threatened and Endangered Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0017    | 149            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Under wired projects, please correct text to say “defending breeding sites or young” and “denning or pupping mammals or nesting birds” as mammals don’t nest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The suggested edits have been made in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                              | Chapter 3 - Alaska Threatened and Endangered Species, page 3.2.6-65                | 3.2.6.6                                                                                                     |
| FN-NC-0017    | 150            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Under birds, please correct text to say the listed species have limited distribution in marine, coastal, and tundra habitats. Also, the correct number of listed birds is four (not five). Impacts to breeding birds are not the only possibility that should be listed here. There is collision risk if projects are not appropriately sited, designed, operated, and maintained. FWS would still consider the impact to be “may affect, not likely to adversely affect” IF the FWS is consulted early in the planning stages of a project, which will allow impacts to be avoided and minimized to the maximum extent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Suggested edits have been made.                                                                                                                                                                                                                                                                                                                                                                                                                                    | Chapter 3 - Alaska Threatened and Endangered Species, Table 3.2.6.6-3              | All Threatened and Endangered Environmental Consequences sections                                           |
| FN-NC-0017    | 151            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Page 5-2 and Page 5.1.7-5 (Land Use) discusses lands owned by the federal government in the Pacific area, and mentions NPSA. Although the NPS manages these lands, this is accomplished through a lease agreement with the territorial Government (we have no ownership interests).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | This distinction has been made in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                  | Chapter 5 - American Samoa Affected Environment, page 5-2                          | 5.1.7.3                                                                                                     |
| FN-NC-0017    | 152            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Text indicates that no General Management Plan (GMP) is available. NPSA does have a GMP, which was approved in 1997; printed or electronic versions are available through Superintendent Scott Burch (see attached contact list at end of comments).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Final PEIS has been revised to mention the GMP.                                                                                                                                                                                                                                                                                                                                                                                                                | Chapter 5 - American Samoa Affected Environment Visual Resources, page 5.1.8-3     | 5.1.8.3                                                                                                     |

| FN-NC-0017    | 153            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Recommend including language prohibiting the use of straw or hay bales for erosion control as they can harbor invasive weed seeds, even if locally sourced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The relevant BMP in the Final PEIS has been updated to indicate that straw or hay bales used for erosion control will be designated as weed free.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Chapter 11<br>11.4.1<br>4th Bullet<br>Page 11-7                                    | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0017    | 154            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Project proponent should work with Alaska Department of Fish and Game to ensure culverts are properly sized to pass fish in any fish-bearing streams.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The relevant BMP in the Final FPEIS has been revised to indicate fish passage should be accommodated working with the appropriate state/territory natural resource agencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Chapter 11<br>11.4.1<br>7th Bullet<br>Page 11-8                                    | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0017    | 155            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | New Build - Aerial Fiber Optic Plant: “Install overhead transmission lines along existing road ROWs wherever possible to minimize vegetation clearing and other potential impacts to wetlands.” In certain locations (e.g., on the North Slope in high fog areas; in areas of critical eider habitat), it might be preferable to clear wetland vegetation outside of the breeding season for line burial as opposed to hanging new transmission wire/cables. For scenarios or deployment activities which require new work such as new Build Scenarios (Buried Fiber Optic Plant, Aerial Fiber Optic Plant, or Submarine Fiber Optic Plant); New Wireless Communication Towers; Deployable Technologies; and Deployable Aerial Communications Architecture, we cannot concur with your determination of not likely to adversely affect because of the many variables involved in the different options, habitats and species. New work should have ESA consultation on a case by case basis with the species of concern and appropriate BMPs. | <p>The text in this section has been modified to indicate that in certain circumstances it may be preferable and less impactful to implement line burial instead of installing lines overhead. Such determinations would be made at the site-specific level.</p> <p>Additionally, the Final PEIS indicates that at the regional, programmatic level, potentially significant impacts are not expected based on the specific impact significance rating criteria developed for each individual resource (which uses a rating system based on magnitude/intensity, geographic extent, and duration/frequency).<sup>6</sup> However, significant impacts could potentially occur at the site-specific level, although with BMPs and mitigation measures this is expected to be rare. Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with local environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. The text in the Final PEIS has been revised to indicate that impact determinations are at the programmatic level per the impact significance criteria.</p> | Chapter 11<br>11.5.2<br>11-11                                                      | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0017    | 156            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Recommend including this additional information: Prior to selecting individual project locations in areas known to have habitat suitable for nesting Bald and Golden Eagles, work with the FWS to design and carry out surveys to locate active and inactive raptor nests. Early collaboration with the FWS will help to incorporate site-specific considerations, thereby minimizing the risk of unauthorized take of eagles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. Site-specific reviews will be performed and consultation where required will be conducted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Chapter 11<br>11.6.2.1<br>Item 4 and 5<br>Page 11-15                               | Chapter 11, BMPS and Mitigation Measures         |

<sup>6</sup> Impacts of climate change on the Preferred Alternative could range from potentially significant to less than significant with BMPs and mitigation measures incorporated at the programmatic level.

|---------------|----------------|------------------|----------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|--------------------------------------------------|
| FN-NC-0017    | 157            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | The Department believes that early consultation with appropriate agencies and stakeholders including, but not limited to, USFWS, NMFS, and state/territory wildlife and natural resources agencies, is critical since all the other BMPs are not detailed enough to properly make a not likely to adversely affect determination. The BMPs outlined in chapter 11.6.4 can be incorporated into the early consultation to reach a not likely to adversely affect determination, through informal consultation. | As mentioned above, the Final PEIS indicates that at the regional, programmatic level, potentially significant impacts are not expected based on the specific impact significance rating criteria developed for each individual resource (which uses a rating system based on magnitude/intensity, geographic extent, and duration/frequency). <sup>7</sup> However, significant impacts could potentially occur at the site-specific level, although with BMPs and mitigation measures this is expected to be rare. Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with local environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. Where the possibility exists for a significant adverse impact at the project specific level, consultation with the appropriate agency may be required. | Chapter 11<br>11.6.4                                                               | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0017    | 158            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | Recommend including this additional information in the BMP section: Ground-disturbing work should take place outside the nesting season, so as to avoid direct and indirect impacts to breeding birds and their reproductive success. The FWS can provide project- specific timing window guidance for ground-clearing activities. As Region 7 is in the process of updating published timing windows, we recommend contacting the FWS for current guidance.                                                  | Please see the response to comment 141.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Chapter 11<br>General                                                              | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0017    | 160            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | The DPEIS is generally well-written, with thorough consideration of biological resources and includes a good discussion of potential impacts to these resources. Most activities discussed in the preferred alternative are identified to have “less than significant” impacts. Given the limited footprint associated with Project infrastructure, we generally agree with the assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | General                                                                            | NA                                               |
| FN-NC-0017    | 161            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>We believe the BMPs listed in Chapter 11 of the PEIS are sufficient to avoid and minimize risk to most species, in most areas. We recommend including the following, additional BMPs:</p> <ul style="list-style-type: none"><li>• Ground-disturbing work will take place outside the bird nesting season to avoid direct and indirect impacts to breeding birds and their reproductive success. The dates for the timing of the nesting seasons are currently being revised in Alaska, so we recommend you work directly with FWS staff in Region 7 to obtain avoidance periods.</li><li>• In areas known to have habitat suitable for nesting eagles (bald and golden), work with the FWS to design and implement surveys to locate active and inactive eagle nests prior to selecting individual Project locations. Early collaboration with the FWS will help to incorporate site-specific considerations, thereby minimizing the risk of unauthorized take of eagles.</li></ul> | Regarding the first suggested BMP, please see the response to comment 141. Site-specific BMPs may be needed in addition to those outlined in the PEIS, and those would be determined during site-specific environmental assessments in coordination with environmental agencies. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. Site-specific reviews will be performed and consultation where required will be conducted. | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0017    | 162            | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <p>On the Alaskan Coastal Plain (ACP) especially, aerial infrastructure might pose risks to birds during the breeding and migration seasons due to: (1) the density of birds migrating to the Arctic to breed; (2) frequent low lighting and poor weather conditions that lead to many low visibility days; and (3) a landscape that otherwise has few tall vertical structures. At risk are a wide variety of migratory bird species, including Alaska-breeding Steller’s (<i>Polysticta stelleri</i>) and spectacled eiders (<i>Somateria fischeri</i>), both of which are listed as threatened under the Endangered Species Act. For these coastal areas, the Department suggests the following additional BMPs should be implemented:</p> <ul style="list-style-type: none"><li>• Self-supporting towers will be used instead of guyed towers wherever possible.</li><li>• When guy wires are necessary, each wire will be marked for its full length, using daytime markers that stand out against the wire and the environment. Not all markers are designed for use in extreme conditions such as those encountered in the Arctic. The Project should work with the FWS to choose appropriate markers. Markers should be regularly maintained for the life of the project.</li><li>• On the ACP, monopole structures will be considered in place of lattice structures to discourage perching and nesting by ravens and raptors/birds of prey, unless use of a monopole structure would require addition of any guy wires. In these cases, projects should work with the FWS to incorporate anti-perching and anti-nesting devices into project design.</li></ul> | <p>The Draft and Final PEIS indicate that the use of non-guyed towers is preferable to guyed towers, and that when guy wires are used they will have daytime markers. FirstNet will consult with USFWS at the site-specific level as required, regarding the use of guyed towers. The text in the Final PEIS has been modified to indicate that, to the extent practicable and feasible, monopole structures may be considered in place of lattice structures on the ACP. If lattice towers are to be used on the ACP, FirstNet and/or their partners would work with the USFWS to incorporate anti-perching and anti-nesting devices into project design, as practicable and feasible.</p>                                                                                                         | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0017    | 162 (cont.)    | 4/25/2016        | Mary Josie Blanchard | US DOI                 | <ul style="list-style-type: none"><li>• Outdoor security or safety lights will be motion-triggered, downcast and/or down-shielded, and directed inward whenever possible to prevent “star” effects when viewed offsite. This recommendation applies to both permanent and temporary lighting used during construction and operation.</li><li>• Lights inside buildings will be motion-triggered. Blackout shades will be installed and used on outward-facing windows at night, when migratory birds are present (e.g., May through October on the ACP).</li><li>• The FWS has concerns about the risks overhead power lines pose to migratory birds on the ACP. Except in special cases, we generally discourage their use. If telecommunications facilities will require use of overhead wires, the FWS would like to provide input on design and placement to minimize potential impacts to migratory birds.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Text has been added Chapter 11, BMPS and Mitigation Measures, of the Final PEIS related to the suggestions made in the first and third bullets. In certain circumstances it may be preferable and less impactful to implement line burial instead of installing lines overhead. Such determinations would be made at the site-specific level. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined.</p> <p>Although project-specific details have not yet been developed, buildings are not anticipated to be tall enough to pose a significant risk for bird collisions as a result of indoor lighting.</p> | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures         |

|---------------|----------------|------------------|----------------------|------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|--------------------------------------------------|
| FN-NC-0017    | 163            | 4/25/2016        | Mary Josie Blanchard | US DOI                                                                                         | For communication towers constructed in forested habitats without ESA compliance, the Department cannot concur with your no effect determination. The consultation process is a forward looking process that works to anticipate impacts and avoid or minimize them. This cannot be done for towers that were constructed without consultation. The Department recommends that towers show proof of existing ESA compliance prior to FirstNet using them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Federal Communications Commission (FCC) is responsible for addressing environmental and historic preservation requirements for existing towers. FirstNet will address ESA compliance requirements for any new towers and modifications made to existing towers for the Nationwide Public Safety Broadband Network (NPSBN) at the site-specific level. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. | General                                                                            | NA                                               |
| FN-NC-0118    | 164            | 7/27/2016        | Kealana Phillips     | State of Hawaii Department of Land and Natural Resources, State Historic Preservation Division | On behalf of the Maui Lana’I Island Burial Council, I would like to thank you for contacting the council regarding the First Responder Network Authority (FirstNet) release of the Draft Programmatic Environmental Impact Statement (PEIS) for the Nationwide Public Safety Broadband Network (NPSBN) in the non-contiguous region of the United States (Alaska, Hawai’i, American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and U.S. Virgin Islands). Unfortunately, with the sporadic meeting schedule of our schedule, we were not able to convene to discuss the PEIS prior to the 60-day comment period ending May 3. However, we would greatly appreciate it if we can remain informed as the project progresses so that we may provide comments in the future as we see fit. Should you have any questions or concerns, please feel free to contact me.                                                                                                                                       | FirstNet will continue to keep the State Historic Preservation Division informed as the project progresses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | General                                                                            | NA                                               |
| FN-NC-0019    | 165            | 5/3/2016         | Shari Wilson         | US EPA                                                                                         | <p>The draft PEIS analyzed three alternatives: 1) No Action; 2) Deployable Technologies Only and; 3) Mixed Technologies. FirstNet selected alternative three (Mixed Technologies) as the preferred alternative. This alternative incorporates a combination of methods including collocation of network equipment, construction of new communication towers, installation of new conduit and fiber technology and deployable technologies (portable satellite phones, cell-on-wheels, cell-on-light trucks and system-on-wheels).</p> <p>Based on our review, EPA finds no objection with the preferred alternative in the draft PEIS. EPA has rated the draft PEIS as LO (“Lack of Objections”). The “LO” rating signifies the draft PEIS did not identify an environmental impacts requiring substantive changes. A summary of EPA’s Rating System Criteria is located at <a href="http://www.epa.gov/compliance/nepa/comments/ratings.html">http://www.epa.gov/compliance/nepa/comments/ratings.html</a></p> | Thank you for your comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | General                                                                            | NA                                               |

| FN-NC-0021    | 172            | 10/11/2016       | Michaela E. Noble | US DOI                 | USFWS recommends conducting vegetation clearing and removal and tree cutting outside of the breeding period for migratory birds. The USFWS Field Offices can provide state-specific date ranges when clearing should be avoided.                                                                                                                                                                                                                                                                                                                                                                                                | Direct impacts to nests during construction have been added under the Direct Injury/Mortality subsection. The use of construction timing windows can be an effective mitigation measure for avoiding and minimizing adverse reproductive effects. At the programmatic level the project covers a wide geographic range and currently lacks project-specific detail. As such, determining the feasibility and effectiveness of this BMP will be done as part of subsequent site-specific reviews. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0021    | 173            | 10/11/2016       | Michaela E. Noble | US DOI                 | We recommend that structures containing the fewest perching options be used in areas where raptor and raven predation of sensitive resources is a concern. Where raptor electrocution is a concern, use of structures and components compatible with the guidance in the Avian Power Line Interaction Committee’s (APLIC) 2006 “Suggested Practices for Avian Protection on Power Lines: The State of the Art in 2006” electrocution manual should be implemented. Where collision is a hazard, we recommend the APLIC’s 2012 “Reducing Avian Collisions with Power Lines: The State of the Art in 2012” manual be implemented. | The suggested BMPs have been added to Chapter 11, BMPs and Mitigation Measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0021    | 174            | 10/11/2016       | Michaela E. Noble | US DOI                 | The USFWS recommends that the suggested practices by the Avian Power Line Interaction Committee be followed to minimize impacts to migratory birds through collision and electrocution (see www.aplic.org for the 2006 electrocution and 2012 collision manuals) for all overhead lines.                                                                                                                                                                                                                                                                                                                                        | A reference to the APLIC practices is included in Chapter 11, BMPs and Mitigation Measures, to be implemented as practicable or feasible during deployment and operation activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0021    | 175            | 10/11/2016       | Michaela E. Noble | US DOI                 | <p>Communication towers are currently estimated to kill between four and five million birds per year. A great deal of the mortality is the result of collisions with supporting guy wires. Additionally, the type of safety lighting on these towers appears to influence their attractiveness to birds. In order to minimize the potential for impacts to migratory birds, the USFWS urges consideration of the following siting and construction recommendations.</p> <p>1. If possible, new communication equipment should be co-located on an existing tower or similar structure (e.g. billboard, water tower, or building mount). Depending on tower load factors, from 6 to 10 providers may co-locate on an existing tower.</p> <p>2. Where co-location is not feasible and a new tower must be constructed, all efforts should be taken to construct towers no more than 199 feet above ground level (AGL), that do not require guys wires (e.g. use a lattice, monopole structure, etc.). Such towers should be unlighted if Federal Aviation Administration (FAA) regulations permit.</p> <p>3. If constructing multiple towers, providers should consider the cumulative effects of all of those towers to endangered, threatened, proposed, and candidate species and migratory birds as well as effects of each individual tower.</p> <p>4. If at all possible, new towers should be sited within existing antenna farms Avoid siting towers near (within 3 to 5 miles of) wetlands, other known bird concentration areas (e.g., state or Federal refuges, staging areas, rookeries), in known migratory or daily movement flyways, or in habitat of threatened or endangered species. Towers should not be sited in areas with a high incidence of fog, mist, or low ceilings.</p> <p>5. If taller (greater than 199 feet AGL) towers requiring lights for aviation safety must be constituted, the minimum amount of pilot warning and obstruction avoidance lighting required by the FAA should be used. Unless required by the FAA, only white strobe lights should be used at night, preferably with the minimum number, minimum intensity, and minimum number of flashes per minute (longest duration between flashes) allowable by the FAA. Current research indicates that solid or pulsating (beacon) red lights attract night-migrating birds at a much higher rate than white strobe lights.</p> | <p>Elements of many of these recommendations are included in Chapter 11, BMPs and Mitigation Measures. Most of these suggestions are also duplicates of the recommendations in USFWS 2013b which are cited in Chapter 11. Site-specific analysis may be required depending on the site conditions, the type of deployment, or any other permits or permissions necessary to perform the work, and the feasibility of implementing these recommendations could be determined during subsequent analysis and consultation. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined.</p> | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0021    | 176            | 10/11/2016       | Michaela E. Noble | US DOI                 | <p>6. Towers designed using guy wires for support that are proposed to be located in known raptor or waterbird concentration areas or daily movement routes, or in major diurnal migratory bird movement routes or stopover sites, should have daytime visual markers (e.g., bird diverter devices) on the wires to prevent collisions by these diurnal moving species. For guidance on markers, the Avian Power Line Interaction Committee has published guidance (Reducing Avian Collisions with Power Lines: The State of the Art in 2012 and Suggested Practices for Raptor Protection on Power Lines: The State of the Art in 2006). Copies can be obtained at <a href="http://www.aplic.org/">http://www.aplic.org/</a>.</p> <p>7. Towers and attendant facilities should be sited, designed, and constructed to avoid or minimize habitat loss within and adjacent to the tower footprint. Road access and fencing should be minimized to reduce or prevent habitat fragmentation and disturbance, and to reduce above-ground obstacles to birds in flight.</p> <p>8. If significant numbers of breeding, feeding, or roosting birds are known to occur within the tower construction area, relocation to an alternate site is recommended. If this is not possible, seasonal restrictions on construction may be advisable in order to avoid disturbance during periods of high bird activity.</p> <p>9. New towers should be designed structurally and electrically to accommodate the applicant/licensee’s antennas and comparable antennas for at least two additional users (minimum of 3 users for each tower structure), unless this design would require the addition of lights or guy wires to an otherwise unlighted and/or non-guyed tower.</p> <p>10.Security lighting for on-ground facilities and equipment should be down-shielded to keep light within the boundaries of the site.</p> <p>11.USFWS personnel and/or researchers from the Communication Tower Working Group or its designees should be allowed access to the site to evaluate bird use, conduct dead bird searches, and to conduct various research.</p> <p>12.Towers no longer in use or determined to be obsolete should be removed within 12 months of cessation of use.</p> | (Included with response above.) | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0021    | 177            | 10/11/2016       | Michaela E. Noble | US DOI                 | Although these measures will provide significant protection for migratory birds, implementation of these measures alone will not remove any liability should violations of the MBTA or the Eagle Act occur. The U.S. Fish and Wildlife Service Division of Law Enforcement and the U.S. Department of Justice have used enforcement and prosecutorial discretion in the past regarding individuals or companies who have made good faith efforts to avoid the take of migratory birds. We acknowledge that you intend to avoid construction during sensitive time periods and within specific spatial buffers for listed species. We recommend that nesting migratory birds also be avoided during the nesting season within species-specific buffers. As a part of the Project, we recommend monitoring of avian use of Project facilities as well as reporting avian mortality events. | (Included with response above.)                                                                                                                                                                                                                                                                                                                                            | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0021    | 178            | 10/11/2016       | Michaela E. Noble | US DOI                 | The reproductive success of federally listed plants may be impacted by the Project, particularly through use of insecticides or pesticides as well as dust generated from construction and use of access roads.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The Draft and Final PEIS acknowledge this potential impact to listed plants.                                                                                                                                                                                                                                                                                               | General                                                                            | NA                                               |
| FN-NC-0021    | 179            | 10/11/2016       | Michaela E. Noble | US DOI                 | A spill prevention, control, and countermeasure plan (SPCCP) should be developed for the Project. This would apply to Water Resources, Wetlands, Fisheries and Aquatic Habitats, T&E Species, and Human Health and Safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The development of an SPCC Plan, as practicable or feasible, has been added to Chapter 11, BMPs and Mitigation Measures, to avoid, reduce, or minimize impacts to the resources mentioned.                                                                                                                                                                                 | General                                                                            | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0021    | 180            | 10/11/2016       | Michaela E. Noble | US DOI                 | Recommend adding a measure about control of fugitive dust generated by the Project’s use of unpaved roads and construction. Dust can settle on plants and block their ability to photosynthesize, and can disrupt pollination success.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Chapter 11, BMPS and Mitigation Measures, of the Draft PEIS included a BMP to implement a dust control plan for construction activities and any travel over unpaved roads. In the Final PEIS, a BMP has been added to this chapter in the Biological Resources section to avoid, reduce, or minimize dust impacts to those resources.                                      | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures         |
| FN-NC-0021    | 181            | 10/11/2016       | Michaela E. Noble | US DOI                 | Recommend adding a measure on controlling speed limits on access roads, particularly within areas where a federally listed animal may be struck by construction and/or maintenance vehicles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Chapter 11, BMPS and Mitigation Measures, of the Draft PEIS included a BMP to post and enforce speed limits on dirt/gravel roads as related to reducing airborne fugitive dust impacts. In the Final PEIS, a BMP has been added to this chapter in the Biological Resources section to avoid, reduce, or minimize potential collision impacts to Wildlife and T&E species. | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures         |

| FN-NC-0021    | 182            | 10/11/2016       | Michaela E. Noble | US DOI                 | Additionally, communication towers might have an impact on migratory birds due to non-ionizing electromagnetic radiation emitted by the tower. Please review the February 7, 2014, letter from the Department to Mr. Eli Veenendaal (National Telecommunications and Information Administrator) for additional information regarding electromagnetic radiation impacts from the Proposed Action (Enclosure 1).                                                                                                                                                                                                                 | <p>The full US DOI comment submission, including the February 7, 2014, letter to Mr. Veenendaal, can be found in Appendix H, <i>Radio Frequency Emissions Comments Received—All Regions</i>, of the Final PEIS. The letter references radiation studies conducted at communication towers and discusses the potential impacts to birds from non-ionizing electromagnetic radiation.</p> <p>The Wildlife sections of the Final PEIS have been updated to include additional information related to potential radio frequency exposure and its associated potential impacts to wildlife, specifically birds and bats. Potential radio frequency exposure impacts to humans are discussed in Section 2.4, Radio Frequency Emissions.</p> | General                                                                            | All Wildlife Environmental Consequences sections |
| FN-NC-0022    | 183            | 10/11/2016       | Brian Shepherd    | FirstNet Colorado      | The environmental regulations, guidelines, exclusions, etc. that apply to states that choose to ‘opt-in’ to the national plan (and the national partner) should apply to states that choose to develop an alternative Radio Access Network (RAN) through their statutory right. States and their partners that choose to opt-out should in no way be treated any differently than states that opt-in. The fundamental environmental impacts for each scenario are the same.                                                                                                                                                    | Thank you for your comments; however, the issues raised are beyond the scope of this Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | General                                                                            | NA                                               |
| FN-NC-0022    | 184            | 10/11/2016       | Brian Shepherd    | FirstNet Colorado      | Categorical exclusions: Any categorical exclusions requested by FirstNet and/or the national partner should set a precedent/template for any categorical exclusions required by an alternative plan state. As the national plan is developed, implemented, and categorical exclusions are granted, the parameters that enable those categorical exclusions should apply to any opt-out states. This will primarily impact the use of existing towers and/or structures for the RAN. A process and reasons for granting any exclusion for a specific tower or structures should be the same for any other towers or structures. | Thank you for your comments; however, the issues raised are beyond the scope of this Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | General                                                                            | NA                                               |
| FN-NC-0022    | 185            | 10/11/2016       | Brian Shepherd    | FirstNet Colorado      | Use of existing assets: We would encourage the PEIS to include a more detailed discussion of the impact of using existing towers and/or structures. Currently, the PEIS states that the use of existing assets ‘may’ have an environmental impact. It would be helpful to include in the final PEIS a set of specific parameters that would guide the decision on whether an existing asset will have an actual impact. We understand that the final impact would be a case-by-case review, but providing some examples of how specific uses of towers/structures may or may not create an impact would be helpful.            | The impacts of using existing assets would vary depending on the specific asset and its unique environment, therefore it is not possible to provide greater specificity on impacts at the programmatic level beyond the discussion of impacts of each project type on the various resource areas included in the Environmental Consequences sections of the document. The impacts of use of existing assets would be subject to further evaluation at the site-specific level. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined.              | General                                                                            | NA                                               |

| FN-NC-0023    | 186            | 10/21/2016       | Michael Robotham | NRCS                   | Another issue that has come up in our internal agency discussions is the need for FirstNet to be aware of land use easements that are held by NRCS (and I believe by other agencies – but we are focused on ours). NRCS holds some very large acreage easements, primarily focused on wildlife habitat. These are mainly located in the Western US, but easements have been purchased nationwide. Easement conditions often severely restrict potential management activities including, but not limited to, construction activities. Easements can be amended, but this is typically a very long process and, depending on the particular species of concern, proposed FirstNet activities may not be compatible with the goals of the particular easement. To address this issue, we suggest that language be included in the Draft PEIS recognizing that FirstNet is aware of this as a potential issue, and that all reasonable efforts will be taken to avoid construction activities in areas covered by existing easements.                                                                                                                                                   | Information related to NRCS easements has been included in the Final PEIS within the Land Use, Airspace, and Recreation sections of each state/territory chapter. In addition, a BMP has been added to Chapter 11, BMPs and Mitigation Measures, indicating that reasonable efforts would be taken to avoid or minimize construction activities in areas covered by existing incompatible easements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | General                                                                            | All Land Use Affected Environment sections; all Land Use Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures |
| FN-NC-0024    | 187            | 10/6/2016        | Nick Antonio     | Antonio Acoustics      | Construction vibration can have a direct effect on natural and cultural resources, including disturbance to humans, impacts on sensitive activities and processes, damage to property and structures, and effects on fauna in both land and marine habitats... I therefore suggest that the PEIS address vibration impacts from construction activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Thank you for your comment. Vibration impacts have been added to the noise and vibrations sections within each state/territory chapter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | General                                                                            | All Noise and Vibrations Affected Environment sections; all Noise and Vibrations Environmental Consequences sections                   |
| FN-NC-0024    | 188            | 10/6/2016        | Nick Antonio     | Antonio Acoustics      | The construction work proposed encompasses a wide variety of processes including (but not limited to) piling, trenching, concrete placement and road construction. Many of these processes are noisy. The exact location of these has not been established but some working is anticipated to be in urban and suburban areas. Therefore, some work will be close to noise sensitive receivers. It is not possible to carry out many construction work processes close to noise sensitive receivers without disturbance, sometimes even after mitigation. The PEIS identifies that noise from “the Proposed Action is expected to result in impacts that are not potentially significant regardless of whether BMPs and mitigation measures are incorporated.” Clearly this is wrongly categorized. As it is not possible to carry out noisy construction and work close to noise sensitive receivers without disturbance, Best Management Practices and mitigation measures should be incorporated. The Assessed Impact should therefore be either “Potentially Significant”, or “Less than significant with best management practices (BMPs) and mitigation measures incorporated.” | Thank you for your comment. See response to comment number 92. The Final PEIS explains that at the programmatic level and based on the impact significance ratings developed, there would be no potentially significant impacts as a result of the Proposed Action as a whole. <sup>8</sup> However, the same impact significance criteria used at the programmatic level may not apply to site-specific build-out activities/actions. The Final PEIS acknowledges that site-specific impacts do have the potential to be greater on a localized basis and may require site-specific assessments and mitigation. FirstNet has not yet determined the methodology that will be employed to address site-specific analysis but will be issuing a Supplemental Programmatic Environmental Impact Statement with that information as soon as it is determined. At the programmatic level, noise impacts are anticipated to be less than significant using the significance criteria established for the analyses. | General                                                                            | Throughout Final PEIS, to include all Noise and Vibrations Environmental Consequences sections                                         |

<sup>8</sup> Impacts of climate change on the Preferred Alternative could range from potentially significant to less than significant with BMPs and mitigation measures incorporated at the programmatic level.

| FN-NC-0025    | 189            | 11/15/2016       | Rob Tomiak      | US EPA                 | We recommend revising the GHG and climate change analysis to remove the 25,000 metric tons of CO2-e reference point and ensure overall consistency with the 2016 Final GHG Guidance.                                                                                                                                                                                                                                                                                                                                                                             | The climate change analyses in the Final PEIS no longer include the 25,000 metric ton reference point and have been revised in accordance with the 2016 Final Guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Climate Change Environmental Consequences sections                                 | All Climate Change Environmental Consequences sections; ES4.14, Table ES4-14 |
| FN-NC-0026    | 190            | 11/8/2016        | Richard Fristik | USDA-RUS               | Section 1.2 - Suggest deleting “of actions and associated levels” from this sentence: “Finally, and as discussed in the introduction of each of the Environmental Consequences sections, the programmatic approach allows FirstNet to identify and define four categories of actions and associated levels of potential impact as described below.”                                                                                                                                                                                                              | This phrase has been deleted from the sentence in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Section 1.2                                                                        | 1.2                                                                          |
| FN-NC-0026    | 191            | 11/8/2016        | Richard Fristik | USDA-RUS               | Sections 2.1.2 and 2.2 - realizing that this is a programmatic assessment, and as stated in Section 2.1, that the network “...must use existing infrastructure to the maximum extent economically desirable”, is it at all possible to at least generally describe the magnitude of parameters of the proposed project for this region in terms of miles of buried and aerial fiber, number of antennas/towers, etc.? If nothing else, this provides some point of reference for the impact assessment and may also inform the assessment of cumulative impacts. | Project design plans have not been developed and therefore this information is not available to be included in the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Sections 2.1 and 2.2                                                               | NA                                                                           |
| FN-NC-0026    | 192            | 11/8/2016        | Richard Fristik | USDA-RUS               | Section 2.4 - This seems oddly placed in this chapter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Radio frequency emission concerns were expressed by the public during the scoping and public comment periods. The discussion of emissions effects to human and non-human species is important to include in Chapter 2, Description of the Proposed Action and Alternatives, as it applies to all states and territories.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Section 2.4                                                                        | NA                                                                           |
| FN-NC-0026    | 193            | 11/8/2016        | Richard Fristik | USDA-RUS               | Concerned that the impact descriptions seem not to match established criteria of USFWS, e.g., for may affect, not likely to adversely affect, the effects are expected to be “discountable, insignificant, or completely beneficial” (FWS S. 7 Consultation Handbook)...                                                                                                                                                                                                                                                                                         | As explained in the Draft and Final PEIS, the impact levels (or effect determinations) used in the analysis of threatened and endangered species and species of conservation concern are based on those in the Endangered Species Consultation Handbook (USFWS and NMFS 1998). The text under the “Impact Assessment Methodology and Significant Criteria” heading in each of these sections describes the three impact levels (no effect; may affect, not likely to adversely affect; may affect, likely to adversely affect). Within these descriptions, the “may affect, not likely to adversely affect” determination indicates that these effects are beneficial, insignificant, or discountable. The text also describes the other two effect determinations. Following these descriptions, the impact significance rating criteria tables provide examples of various effect characteristics based on magnitude/intensity, geographic extent, and duration/frequency. | NA                                                                                 | NA                                                                           |
| FN-NC-0026    | 194            | 11/8/2016        | Richard Fristik | USDA-RUS               | ...references to CEQ 2014 guidance on climate change/GHG; CEQ issued final guidance Aug. 1, 2016. Not only do the references need to be changed, but text needs to be modified to reflect the final guidance, e.g., it no longer uses the 25,000 MT threshold.                                                                                                                                                                                                                                                                                                   | The Final PEIS uses the August 1, 2016 final guidance. The climate change analyses in the Final PEIS no longer include the 25,000 metric ton reference point and have been revised in accordance with the 2016 Final Guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | General                                                                            | All Climate Change Environmental Consequences sections; ES4.14, Table ES4-14 |

| FN-NC-0026    | 195            | 11/8/2016        | Richard Fristik                         | USDA-RUS                                          | BMPs/Mitigation... there is considerable overlap and redundancy in the BMPs and mitigation measures. Also, some appear to be neither BMP nor mitigation measure...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Where appropriate and applicable, the suggestions made by RUS on the West Region BMPs and Mitigation Measures chapter were made in the non-contiguous region chapter.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures                                                                                                                                                      |
| FN-NC-0026    | 196            | 11/8/2016        | Richard Fristik                         | USDA-RUS                                          | Appendix A: The appendix possibly should be re-titled, and at a minimum the table annotated to indicate that these agencies were invited to be cooperating agencies (according to section 1.5.2), and then highlight or otherwise indicate those that accepted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The title of Appendix A has been changed to <i>Invited Cooperating Agencies</i> in the Final PEIS to reflect the fact that the list represents the agencies that were invited to become cooperating agencies. The text of the appendix was also updated to indicate which agencies accepted the invitation.                                                                                                                                                                                                                                                                                                                   | Appendix A                                                                         | Appendix A, <i>Invited Cooperating Agencies</i>                                                                                                                                               |
| FN-NC-0027    | 197            | 1/20/2017        | Dr. Andrea A. Hunder and Jackie Rodgers | Osage Nation Tribal Historic Preservation Office  | First, it came to our attention that inadvertant discoveries and the Native American Graves Protection and Repatriation Act, also known as NAGPRA (Public Lawy 101-601; 25 U.S.C. 3001-3013) were not mentioned throughout the document. As the avoidance of disturbing burials is a top priority for the Osage Nation, this omission needs to be addressed. We suggest adding a BMP to follow all state and national laws and regulations if inadvertent discoveries of human remains are made during construction. Additionally, we suggest that state burial laws be included in the cultural resources sections' lists of state laws as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment. NAGPRA is addressed in Appendix C, <i>Environmental Laws and Regulations</i> , as well as in the applicable Cultural Resources Affected Environment and Environmental Consequences sections. Relevant burial laws are included in the "Specific Regulatory Considerations" under Section X.1.11. For clarity, the suggested BMP has been added to Chapter 11, BMPs and Mitigation Measures.                                                                                                                                                                                                       | General                                                                            | All Cultural Affected Environment sections; all Cultural Environmental Consequences sections; Chapter 11, BMPS and Mitigation Measures; Appendix C, <i>Environmental Laws and Regulations</i> |
| FN-NC-0027    | 198            | 1/20/2017        | Dr. Andrea A. Hunder and Jackie Rodgers | Osage Nation Tribal Historic Preservation Office  | One of the BMPs states "Follow all applicable federal requirements for consultation on the identification and assessment of effects to cultural resources." While it is important to consult with all invested parties on potential impacts to cultural resources, it is especially important to consult with Tribes before work begins. Tribes have special knowledge of their significant sites and often still utilize these sites in ceremonies or for other cultural purposes. Additionally, several peices of legislation and executive orders require tribal consultation including NAGPRA, the American Indian Religious Freedom Act (AIRFA) (16 U.S.C. 1996), the Archeological Resources Protection Act of 1979. (ARPA) (16 U.S.C. 470aa-mm), the National Historic Preservation Act (NHPA) (16 U.S.C. 470 et seq.), the National Environmental Policy Act (NEPA) Implementing Regulations (40 CFR Part 1500, and Executive Order 13175: Consultation and Coordination with Indian Tribal Governments (Nov. 6, 2000). This office recommends that tribal consultation be emphasized either within the wording of this BMP or in an additional BMP. | Thank you for your comment. When site-specific information is known, American Indian tribes will be notified of the deployment locations using FCC's Tower Construction Notification System (TCNS). At that time, the federally recognized tribes with an interest in a given geographic area will be able to review the project location(s) within that given geographic area and provide feedback, comments, or requests to FirstNet regarding the project(s) and its location in relation to cultural resources. Additionally for clarity, the suggested BMP has been revised in Chapter 11, BMPs and Mitigation Measures. | Chapter 11                                                                         | Chapter 11, BMPS and Mitigation Measures                                                                                                                                                      |
| FN-NC-0028    | NA             | 9/29/2016        | Dr. Albert M. Manville                  | Wildlife and Habitat Conservation Solutions, LLC; | Comments from this submittal express concerns about the potential impacts of radio frequency radiation to wildlife and humans. This submittal also expresses concerns related to birds colliding with communication towers. This full comment submission can be found in Appendix H of the Final PEIS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Wildlife sections of the Final PEIS have been updated to include additional information related to potential radio frequency exposure and its associated potential impacts to wildlife, specifically birds and bats. The Wildlife sections also address potential collision impacts. Potential radio frequency exposure impacts to humans are discussed in Section 2.4, Radio Frequency Emissions.                                                                                                                                                                                                                        | General                                                                            | All Wildlife Environmental Consequences sections                                                                                                                                              |

## 15. LIST OF PREPARERS AND CONTRIBUTORS

### *Department of Commerce First Responder Network Authority*

#### **Bielakowski, Andrew**

M.A., Archaeology, University of Toronto, Canada, 2000

B.S./B.A., Anthropology, Classical Civilizations, Philosophy, Loyola University Chicago, 1998

#### **Eck, Christopher**

J.D., Law, University of Miami School of Law, 1996

M.A., History and Historical Archaeology, University of Massachusetts Boston, 1993

B.A., History, minor in Communications, Loyola University New Orleans, 1988

Graduate coursework, Sustainability and Environmental Management, Harvard University Extension School, 2008–2010.

#### **Pereira, Amanda**

M.S., Urban and Regional Planning, University of Wisconsin–Madison, 2002

B.A., Biology and Environmental Science, Boston University, 1998

#### **Scinta, Robert**

M.S., Environmental Engineering, Northeastern University, 1997

B.S., Interdisciplinary Engineering and Management, Clarkson University, 1995

#### **Walker, Genevieve**

B.A., Geology, Florida International University, 1984

#### **Wayne, Claudia**

Leadership Coaching Certificate Program, Georgetown University, 2004

Executive Certificate Program: Strategic Management of Technology & Innovation, University of Maryland, 2001

M.A., Clinical Legal Education, Antioch School of Law, Washington, D.C., 1983

J.D., Suffolk University Law School, Boston, MA, 1977

Bachelor of Arts in Urban Studies, Wheaton College, Norton, MA, 1973

### *Environmental Resources Management*

#### **Afon, Adeyinka—Air Quality; Noise and Vibrations**

M.S.E., Environmental Process Engineering, Johns Hopkins University, 2004

B.S., Chemical Engineering, Ladoke Akintola University of Technology, Nigeria, 2001

#### **Ajmi, Amal—Wildlife**

M.S., Marine Science, University of Alaska, 1996

B.S., Biology, Northland College, 1989

#### **Appell, Joanie—Geographic Information Systems**

M.S., Geographic Information Systems, The Pennsylvania State University, anticipated 2017

Post-baccalaureate Certificate, Geographic Information Systems, The Pennsylvania State University, 2014

M.S., Urban and Regional Planning, University of Wisconsin–Madison, 2008

B.A., English, St. Mary's College of Maryland, 2004

#### **Beck, Jacqueline—Human Health and Safety**

M.P.H., Community Health Education, San Francisco State University, 2013

B.A., Anthropology, University of California Berkeley, 2009

#### **Bogan, Natalie—Infrastructure**

M.E.M., Environmental Management, Duke University, 2014

B.A., Psychology, Rice University, 2010

#### **Bourdeau, Franklin—Noise and Vibrations**

M.S., Engineering Management with a concentration in Environment and Energy, The George Washington University, 2012

B.S., Chemical Engineering, Universidad de Oriente, Santiago de Cuba, 2008.

#### **Cooke, Samantha—Fisheries and Aquatic Habitats; Wildlife**

B.S., Environmental Biology, California Polytechnic University, 2014

#### **Connelly, Jonathan—Climate Change; Threatened and Endangered Species and Species of Conservation Concern**

Post-baccalaureate Certificate, Geographic Information Systems, The Pennsylvania State University, 2015

B.A., Environmental Studies, Eastern University, 2003

#### **Davis, Leslie—Fisheries and Aquatic Habitats**

B.S., Biology, University of Arkansas, 2008

#### **DeWitt, Andrew—Project Management; All Sections; Soils; Geology; Terrestrial Vegetation**

M.S., Geospatial Science in Geology and Geography, Missouri State University, 2012

B.S., Geology, Grand Valley State University, 2010

**Doperalski, Mark—Cultural Resources**

M.A., Archaeology and Heritage Management, University of Minnesota–Twin Cities, 2013  
B.S., Archaeological Science, University of Wisconsin–La Crosse, 2000

**Heather Heater—Cumulative Effects**

M.S., Environmental Resource Management, Florida Institute of Technology, 1999  
B.S., Marine Biology, Florida Institute of Technology, 1997

**Hiatt, Kris—Technical Editing; Document Management**

B.A., English, Indiana University, 1990

**Kok, Peyun—Human Health and Safety**

Graduate Diploma, Health Services and Policy Research, Ontario Training Center, 2009  
M.E.S., Urban and Regional Planning, York University, 2009  
B.Sc., Biology, University of Toronto, 2005

**Koster, Steven—Partner-In-Charge; All Sections; Executive Summary; Cumulative Effects**

M.S., Environmental Engineering, University of Michigan, 1985  
B.S., Civil Engineering, University of Michigan, 1984  
B.S., Letters and Engineering, Calvin College, 1984

**Lagerloef, Kara—Human Health and Safety**

M.S., Public Affairs, Evans School of Public Affairs, University of Washington, 2010  
B.A., Anthropology, University of California Santa Cruz, 2005

**Mitchell, Kristina—Socioeconomics; Environmental Justice; Visual Resources; Cultural Resources**

M.A., International Relations, Johns Hopkins School of Advanced International Studies, 2007  
B.A., International Relations, Boston University, 2000

**Musa, Danielle—Air Quality**

M.S., Environmental Planning and Management, Johns Hopkins University, Anticipated 2016  
B.S., Biological Engineering, Cornell University, 2010

**Mwangi, Wairimu—Climate Change**

M.S., Sustainable Engineering, Villanova University, 2012  
B.S., Chemical Engineering, Villanova University, 2010

**Nagrath, Pooja—Infrastructure**

M.S., International Environmental Management and Sustainability, Arizona State University, 2008  
M.S., Environmental Science, Panjab University, 2006  
B.S., Zoology, Delhi University, 2004

**O'Brien, John—Fisheries and Aquatic Habitats**

M.S., Fisheries Science, University of Alaska Fairbanks, 2006  
B.S., Aquatic Biology, Northern Arizona University, 1995

**Pikman, Braulio—Climate Change**

B.S., Mechanical Engineering, Polytechnic School University of São Paulo, 1984

**Pirela, Herbert—Soils; Geology**

Ph.D., Soil Chemist (Soil Scientist), Iowa State University, 1987

M.S., Soil Fertility, Colorado State University, 1982

B.S., Agronomy, Colorado State University, 1980

**Quiring, Sharon—Human Health and Safety**

B.Sc., Environmental Health, University of Washington School of Public Health, 1987

**Rykken, Erin—Technical Editing; References**

M.L.S., Indiana University, 2009

M.A., English, Boise State University, 2004

B.A., English, University of Wisconsin-Green Bay, 2000

**Shoemaker, Carissa—Wetlands; Fisheries and Aquatic Habitats; Wildlife**

B.S., Natural Resource Sciences, Washington State University, 2009

**Shoutis, Levia—Wetlands**

M.S., Land Resources and Environmental Sciences, Montana State University, 2007

B.A., Environmental Biology, University of Montana, 2000

**Slayton, Sandy—Water Resources**

M.A., Ecology, University of North Carolina at Chapel Hill, 2002

B.A., Environmental Science, University of Virginia, 1997

**Smith, Emily—Technical Editing; Document Management**

B.A., Journalism, Columbia College Chicago, 2003

**Steimle, Erik—Water Resources**

B.S., Environmental Biology, Southern Oregon University, 2000

**Sussman, Benjamin—Land Use, Air Space, and Recreation; Socioeconomics;  
Environmental Justice; Visual Resources; Executive Summary**

M.C.R.P., City and Regional Planning, Georgia Institute of Technology, 2002

B.S., Science, Technology, and Society, Stanford University, 1998

**Tice, Leslie—Infrastructure**

B.S., Environmental Science and Policy, University of South Florida, 1998

**Tims, Julia—Threatened and Endangered Species and Species of Conservation Concern**

M.S., Natural Resources Management/Ecology, Cornell University, 1999

B.S., Entomology and Applied Ecology/Wildlife Conservation, University of Delaware and  
Oregon State University, 1990

**Todorov, Melinda—Land Use, Air Space, and Recreation; Socioeconomics; Environmental Justice**

NEPA Certificate, Duke Environmental Leadership Program, Duke University, 2012

M.Sc., Aquatic Ecology, University of Bremen, Germany, 2001

B.S., Biology, Central Michigan University, 1999

**Vickery, Steven—Geographic Information Systems**

B.A., Environmental Planning/GIS, Bloomsburg University, 2011

**Williams, Jeff—Biological Resources**

B.S., Biology, Grand Valley State University, 1994

# First Responder Network Authority

## Nationwide Public Safety Broadband Network Final Programmatic Environmental Impact Statement for the Non-Contiguous United States

### Volume 8

Amanda Goebel Pereira, AICP  
NEPA Coordinator  
First Responder Network Authority  
U.S. Department of Commerce  
12201 Sunrise Valley Dr. M/S 243  
Reston, VA 20192

#### **Cooperating Agencies**

Federal Communications Commission  
General Services Administration  
U.S. Department of Agriculture—Natural Resource Conservation Service  
U.S. Department of Agriculture—Rural Utilities Service  
U.S. Department of Agriculture—U.S. Forest Service  
U.S. Department of Commerce—National Telecommunications and  
Information Administration  
U.S. Department of Defense—Department of the Air Force  
U.S. Department of Energy  
U.S. Department of Homeland Security

## TABLE OF CONTENTS

|                                                                                                                                              |            |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1. Introduction.....</b>                                                                                                                  | <b>1-1</b> |
| 1.1. Overview and Background .....                                                                                                           | 1-1        |
| 1.2. Programmatic Approach and Tiering.....                                                                                                  | 1-3        |
| 1.3. Project Regions and Description of the Proposed Action Area .....                                                                       | 1-5        |
| 1.4. Purpose and Need for the Proposed Action .....                                                                                          | 1-6        |
| 1.5. Federal Agency Participation.....                                                                                                       | 1-8        |
| 1.5.1. Lead Agency .....                                                                                                                     | 1-8        |
| 1.5.2. Cooperating Agencies .....                                                                                                            | 1-8        |
| 1.5.3. Consulting Parties .....                                                                                                              | 1-8        |
| 1.6. Cultural Resources Consultation.....                                                                                                    | 1-9        |
| 1.7. The NEPA Process and Public Involvement .....                                                                                           | 1-9        |
| 1.7.1. Public Involvement .....                                                                                                              | 1-9        |
| 1.7.2. Scoping .....                                                                                                                         | 1-9        |
| 1.7.3. Public Comment on the Draft PEIS .....                                                                                                | 1-10       |
| 1.8. Overview of Relevant Federal Laws and Executive Orders .....                                                                            | 1-11       |
| 1.8.1. National Environmental Policy Act .....                                                                                               | 1-11       |
| 1.8.2. National Historic Preservation Act .....                                                                                              | 1-12       |
| 1.8.3. Endangered Species Act .....                                                                                                          | 1-13       |
| 1.8.4. Magnuson-Stevens Fishery Conservation and Management Act .....                                                                        | 1-13       |
| 1.8.5. Marine Mammal Protection Act .....                                                                                                    | 1-14       |
| 1.8.6. Migratory Bird Treaty Act .....                                                                                                       | 1-14       |
| 1.8.7. Clean Water Act.....                                                                                                                  | 1-14       |
| 1.8.8. Coastal Zone Management Act.....                                                                                                      | 1-15       |
| 1.8.9. Occupational Safety and Health Act.....                                                                                               | 1-15       |
| 1.8.10. Executive Order 11988 (as Amended by EO 13690) – Floodplain<br>Management.....                                                       | 1-16       |
| 1.8.11. Executive Order 11990 – Protection of Wetlands .....                                                                                 | 1-16       |
| 1.8.12. Executive Order 12898 – Federal Actions to Address Environmental<br>Justice in Minority Populations and Low-Income Populations ..... | 1-17       |
| 1.8.13. Executive Order 13186 – Responsibilities of Federal Agencies to<br>Protect Migratory Birds .....                                     | 1-17       |
| 1.8.14. Executive Order 13693 – Planning for Federal Sustainability in the<br>Next Decade.....                                               | 1-18       |
| 1.9. PEIS Organization .....                                                                                                                 | 1-18       |
