## 16. DISTRIBUTION LIST

### COOPERATING FEDERAL AGENCIES

**Federal Communications**

**Commission** Erica Rosenberg,  
Washington D.C.

**General Services Administration**

Nathan Smith, Washington D.C.

**U.S. Department of Agriculture,  
Natural Resource Conservation  
Service**

Michael Robotham, Lincoln, NE

**U.S. Department of Agriculture,  
Rural Utilities Service**

Rich Fristik, Washington D.C.

**U.S. Department of Agriculture,  
U.S. Forest Service**

Reginald Woodruff, Washington D.C.

**U.S. Department of Commerce,  
FirstNet**

Genevieve Walker, Reston, Virginia  
Laura Pettus, Washington D.C.

**U.S. Department of Commerce,  
National Telecommunications and  
Information Administration**

Carolyn Dunn, Washington D.C.

**U.S. Department of Defense,  
Department of the Air Force**

Jack Bush, Washington D.C.

**U.S. Department of Energy**  
William Ostrum, Washington D.C.

**U.S. Department of Homeland Security**  
Jennifer Hass, Washington D.C.

**MEMBERS OF CONGRESS**

**Alaska**

Senator Lisa Murkowski  
Senator Dan Sullivan  
Representative Don Young

**Hawaii**

Representative Tulsi Gabbard  
Representative Colleen Hanabusa  
Senator Mazie Hirono  
Senator Brian Schatz

**American Samoa**

Representative Aumua Amata Coleman  
Radewagen

**Guam**

Representative Madeleine Bordallo

**Northern Mariana Islands**

Representative Gregorio Kilili Camacho  
Sablan

**Puerto Rico**

Representative Jennifer González Colón

**U.S. Virgin Islands**

Representative Stacey Plaskett

## **STATE AND TERRITORIAL GOVERNMENT AGENCIES**

### **Alaska**

Alaska Department of Environmental  
Conservation, Juneau, AK  
Alaska Department of Fish and Game,  
Juneau, AK  
Alaska Department of Natural Resources  
Office of History and Archaeology,  
State Historic Preservation Office,  
Anchorage, AK  
Alaska Department of Public Safety,  
Alaska State Troopers,  
Anchorage, AK

### **Hawaii**

Division of Forestry and Wildlife,  
Honolulu, HI  
Hawaii Department of Land and Natural  
Resources, Honolulu, HI  
Hawaii Department of Health Office of  
Environmental Control, Honolulu, HI  
Hawaii State Historic Preservation  
Office, Kapolei, HI  
Management Office, State of Hawaii  
Department of Defense, Honolulu, HI

### **American Samoa**

American Samoa Department of Marine  
and Wildlife Resources,  
Pago Pago, AS  
American Samoa Environmental  
Protection Agency, Pago Pago, AS  
American Samoa Government, Historic  
Preservation Office, Pago Pago, AS  
American Samoa Government,  
Department of Homeland Security,  
Pago Pago, AS

### **Guam**

Guam Department of Agriculture,  
Division of Aquatic and Wildlife  
Resources, Mangilao, Guam  
Guam Environmental Protection Agency,  
Tiyan, Barrigada, Guam

Guam Historic Resources Division, State  
Historic Preservation Office, Agana  
Heights, Guam  
Guam Homeland Security, Department of  
Civil Defense, Agana Heights, Guam

### **Northern Mariana Islands**

CNMI Bureau of Environmental and  
Coastal Quality, Division of  
Environmental Quality, Saipan, MP  
Department of Community and Cultural  
Affairs, Division of Historic  
Preservation, Saipan, MP  
Department of Lands and Natural  
Resources, Division of Fish and  
Wildlife, Saipan, MP  
Division of Coastal Resources  
Management, Saipan, MP  
Office of Homeland Security and  
Emergency Management, Saipan, MP

### **Puerto Rico**

Puerto Rico Department of Natural and  
Environmental Resources,  
San Juan, PR  
Puerto Rico Emergency Management  
Agency, San Juan, PR  
Puerto Rico State Historic Preservation  
Office, San Juan, PR

### **U.S. Virgin Islands**

Bureau of Information Technology,  
Government of the United States  
Virgin Islands, Christiansted, VI  
Division of Environmental Protection,  
St. Thomas, VI  
Division of Fish and Wildlife,  
St. Thomas, VI  
U.S. Virgin Islands Department of  
Planning and Natural Resources,  
St. Thomas, VI, and Frederiksted, VI  
U.S. Virgin Islands State Historic  
Preservation Office, Kongens Quarter,  
Charlotte Amalie, St. Thomas, VI

## **TRIBES AND NATIVE ORGANIZATIONS**

### **Alaska**

Agdaagux Tribe of King Cove  
Akiachak Native Community  
Akiak Native Community  
Alatna Village

## 18. GLOSSARY

Terms are defined within the context of this Programmatic Environmental Impact Statement.

**aeolian:** An environment where wind is the major agent of sediment deposition.

**agroecosystems or agroforestry:** Land use management system in which trees or shrubs are grown around or among crops or pastureland.

**alluvial fan:** Sediment or debris in a fan shape deposited by streams and rivers.

**alluvial valleys:** Valleys formed by rivers.

**alluvium:** Sediment (clay, silt, sand, and/or gravel) deposited by flowing streams in a river valley.

**alvar:** A biological environment of naturally open areas of thin soil over limestone or marble bedrock, distinguished by a vegetation community that includes a number of rare plants.

**ammonia slip:** An industry term for ammonia passing through the Selective Catalytic Reduction system un-reacted. This occurs when ammonia is over-injected into a gas stream, temperatures are too low for ammonia to react, or the catalyst has degraded.

**anadromous fish:** Fish born in freshwater that migrate to the ocean to grow as adults, and then return to freshwater to spawn.<sup>1</sup>

**anchialine pools:** Enclosed, landlocked waterbodies or ponds with an underground connection to both fresh and salt water.<sup>2</sup>

**anthropogenic:** Changes caused by humans.

**aquatic:** Of or related to water.

**aquifer:** An underground layer of water-bearing permeable rock, rock fractures, or unconsolidated sediments from which groundwater can be extracted using a water well.

**arthropod:** Arthropods are invertebrate animals that have segmented bodies and jointed appendages, such as insects, spiders, and crustaceans.

**attainment area:** Any area that meets the national primary or secondary ambient air quality standard for the pollutant.

**avifauna:** The birds of a particular region, habitat, or geological period.

**backhaul capacity:** The ability of a network to transfer data from a radio base station or cell site to a larger core network. These connections are typically made via fiber optic cable and microwave technology.

**benthic:** Anything associated with or occurring on the bottom of a body of water.

<sup>2</sup> NOAA (National Oceanic and Atmospheric Administration). 2006. *Fisheries Glossary*. NOAA Technical Memorandum NMFS-F/SpO-69. U.S. Department of Commerce. Accessed: August 8, 2015. Retrieved from: <https://www.st.nmfs.noaa.gov/st4/documents/FishGlossary.pdf>

**binge drinking:** More than five drinks on one occasion for adult men and more than four drinks on one occasion for adult women.<sup>3</sup> See also heavy alcohol consumption.

**biology (soils):** The presence/absence of vegetation in soils that affects the soil's organic content quantity.

**biophysical settings:** Settings that represent the areas of vegetation that dominates a landscape without human disturbance.

**bioretention:** Bioretention is a structural storm water control measure that captures and temporarily stores storm water runoff using soils and vegetation in shallow basins or landscaped areas to provide enhanced removal of dissolved storm water pollutants, including nutrients, pesticides, organics, metals, and biological constituents.

**bivalve:** An aquatic mollusk with a hinged shell that encloses an invertebrate body.

**bog:** Wet, spongy ground with soil composed mainly of decayed vegetable matter.

**boreal forest:** Forest that consists primarily of spruces, pines, and larches.

**breeding area:** The area used by an organism to reproduce and to rear its offspring.

**bycatch:** Unintentional capture/injury/entanglement of unwanted species during commercial fishing (e.g., a shark captured in a seine net targeting salmon).

**calcareous:** Of or containing calcium carbonate, calcium, or limestone, or occurring on limestone.

**candidate species:** A species officially nominated for listing as threatened or endangered, according to the Endangered Species Act.

**carbon sink:** Carbon sinks occur when natural processes absorb more carbon dioxide than they release. Examples of natural processes that serve as carbon sinks include forests, soils, oceans, and vegetation.

**catadromous:** An organism that lives in fresh water and travels to the sea to spawn.

**cays:** Small, low-elevation, sandy islands on the surface of a coral reef.

**cetacean:** An order of marine mammals commonly known as whales, dolphins, and porpoises.

**Chamorro:** Indigenous people of the Mariana Islands, including Guam and the Northern Mariana Islands.

**chikungunya:** A mosquito-borne disease.

**cistern:** An artificial reservoir, usually underground used to store water.

**Class I Areas:** National parks and wilderness areas in attainment or unclassifiable areas that exceed 5,000 acres in size and were in existence on August 7, 1977.

**climate (soils):** Chemical changes in parent material occur slowly in low temperatures. Hot temperatures evaporate moisture, which facilitates chemical reactions within soils. The highest degree of reaction within soils occurs in temperate, moist climates.

**commercial fishery:** The whole process of catching and marketing fish and shellfish for sale.

**confined aquifers:** Layers of groundwater that are generally bound above and below with impermeable layers of rock or sediment. Unconfined aquifers are not bound by such layers.

**congregatory:** The behavior of gathering in groups.

**coral bleaching:** The stress response of corals releasing the photosynthetic plankton, known as Zooxanthellae, leading to coral bleaching.<sup>4</sup>

**county equivalent:** The U.S. Census Bureau terminology for a geographic area that functions as a unit of state government, even if it is not formally known as a county.

**covered haul system:** A covered haul system involves water “piped into the carrier vehicle, withdrawn by similar mechanism into the user’s cistern, and in most cases, piped again from cistern to faucet.”<sup>5</sup>

**critical habitat:** An area essential to the conservation of an endangered or threatened species that is designated by a governmental entity and that may require special management considerations or protection.

**crustaceans:** A group of freshwater and saltwater invertebrates with jointed legs and a hard shell of chitin (e.g., shrimps, crabs, lobsters, and crayfish).<sup>6</sup>

**decapods:** Types of crustaceans. Common crustacean examples include crayfish, crabs, and lobsters.

**deciduous:** Plants that shed certain structures such as leaves seasonally or at a given stage in development.

**degradation:** A reduced capacity of the environment to meet social or ecological objectives or needs.

**demersal:** Species that live and/or feed on or near the sea floor.

**dengue:** A mosquito-borne disease.

**depredating bird:** A bird that causes resource damage, economic loss, or a threat to health or human safety.

**dimension stone:** Natural rock material quarried for the purpose of obtaining blocks or slabs that meet specifications as to size and shape.

<sup>6</sup> National Oceanic and Atmospheric Administration. 2006. *NOAA Fisheries Glossary*. NOAA Technical Memorandum NMFS-F/SPO-69. October 2005. Revised Edition, June 2006.

**direct effect:** Effects that physically alter a historic property in some way.

**ecoregion:** An ecological area that is relatively homogeneous in climate, landform, soil, potential natural vegetation, hydrology, or other ecologically relevant variables.

**ecosystem:** A biological community of interacting organisms together with their physical environment.

**endangered species:** According to the Endangered Species Act, the term *endangered species* means any species in danger of extinction throughout all or a significant portion of its range. This does not include species of the Class Insecta determined by the Secretary of the Interior to constitute a pest whose protection under the provisions of the Endangered Species Act would present an overwhelming and overriding risk to humans.

**endemic:** Species that are only found in one area or region. Also, (of a disease or condition) regularly found among particular people or in a certain area.

**energetic (climate change):** Refers to strength and amplification in oscillations.

**ephemeral stream:** Ephemeral streams carry water only as a result of precipitation (any time of year).

**epiphytic:** Plants living on, or attached to, another plant.

**ermine:** A small carnivorous short-tailed weasel.

**erosion control blanket:** Biodegradable or synthetic sheet-like materials that are rolled out onto disturbed areas to protect soil from wind and water erosion.

**estuarine:** See estuary.

**estuarine emergent wetlands:** Coastal wetlands dominated by herbaceous vegetation where salt water from the sea mixes with rivers and streams.

**estuarine intertidal:** Coastal areas usually semi-enclosed by land but have open partially obstructed access to open ocean. Water is partially diluted by freshwater runoff.

**estuary:** Coastal areas where salt water from the sea mixes with rivers and streams, and may also be called bays, harbors, inlets, or lagoons.

**ethnographic:** The systematic study of people and cultures, generally designed to explore culture from the point of view of the subject of the study.

**eutrophication:** A process where waterbodies receive excess nutrients that stimulate excessive plant growth.

**evapotranspiration:** The sum of evaporation and plant transpiration from the Earth's land and ocean surface to the atmosphere

**exotic species:** A plant or animal species introduced from another geographic area that is not native to the area.

**expansive soils:** Soils that include clay materials that swell when they absorb water and shrink when dry, leaving voids in the soil.

**extant:** A species still in existence.

**extinction:** The state or process of a species' disappearance from part or all of its range.

**extirpated:** Cease to exist in the geographic area of study.

**fern allies:** Plants similar to true ferns but have different leaf structures, if they have leaves at all.

**forams (Foraminifera):** Single-celled organisms with shells.

**freshwater-lens systems:** Systems where freshwater floats on saltwater separated by a transition zone of brackish water found in areas where groundwater is not held up by impermeable barriers.

**frugivorous:** Animals that eat primarily fruit.

**furbearers:** Mammal species traditionally trapped or hunted for their fur, such as marten, lynx, wolverine, and beaver.

**geology:** An interdisciplinary science with a focus on the following aspects of earth sciences: geologic hazards and disasters, climate variability and change, energy and mineral resources, ecosystem and human health, and groundwater availability.

**germanium:** A mining byproduct associated with zinc production.

**gestation:** The period of development from conception to birth.

**glacial:** Relating to, or resulting from, the presence or effects of glaciers and ice sheets.

**Guamanians:** The native peoples of Guam.

**guts:** Narrow coastal water channels usually subject to strong tidal currents flowing back and forth.<sup>7</sup>

**habitat:** The natural environment where an organism lives, including its biological and physical surroundings.

**hard ground conditions:** A hard site exists where noise travels away from the source over a generally flat, hard surface such as water, concrete, hard-packed soil, or other ground surfaces having a low porosity. These are examples of reflective ground, where the ground does not provide any attenuation. The standard attenuation rate for hard site conditions is 6 A-weighted decibels (dBA) per doubling of distance for point source noise (e.g., power generators, most construction activities, etc.) and 3 dBA per doubling of distance for line sources (e.g., highway traffic, conveyor belt, etc.).<sup>8</sup>

**harvesting:** The act or process to take or kill wildlife for food, sport, or population control; to gather crops for consumption or sale.

**haulouts:** Areas of land or ice where seals and walrus come ashore to rest, molt, or breed.

**haze:** A condition caused when sunlight encounters tiny pollution particles in the air. Some light is absorbed by particles; other light is scattered away before it reaches an observer. More pollutants mean more absorption and scattering of light, which reduce the clarity and color of what we see. Some types of particles, such as sulfates, scatter more light, particularly during humid conditions.

**heavy alcohol consumption:** Drinking five or more drinks on the same occasion on each of five or more days in the past 30 days. See also binge drinking.

**heavy drinking:** More than two drinks per day for adult men and more than one drink per day for adult women.<sup>9</sup>

**herbaceous:** Plants that do not have woody stems.

**herbivorous:** Animals that eat primarily plants.

**hibernacula:** Habitats within which animals hibernate or otherwise seek refuge for extended periods.

**highly migratory:** Pelagic, or open-water, species that have a wide geographic distribution, both inside and outside countries' 200-mile zones, and that undertake migrations of significant but variable distances across oceans for feeding or reproduction.

**historic property:** An historic property is defined as any "prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion on the National Register [of Historic Places] including artifacts, records, and material remains related to such a property or resource" (16 USC § 470(w)(5)).

**hookah:** A basic form of surface-supplied diving in which the air supply is via a single hose.

**hotspot (geology):** A location where plumes of hot rock rise from within the Earth toward the surface. Lower pressures toward the surface allow rock to melt, which can result in molten rock, volcanism, and lava flows.

**human environment:** The natural and the physical (e.g., structures) environment, and the association of people and their activities to those environments.

**human health and safety:** The existing environment for health and safety is defined by occupational and environmental hazards likely to be encountered during the construction, operation, and maintenance of towers, antennas, cables, utilities, and other equipment and infrastructure at existing and potential FirstNet telecommunication sites.

**hydrology:** The properties of water movement and distribution via precipitation, runoff, storage, and evaporation, especially in relation to land.

**ice floe:** A sheet of floating ice where walrus calves are typically born.

---

<sup>9</sup> Centers for Disease Control. 2016. *Excessive Alcohol Use: Preventing a Leading Risk for Death, Disease, and Injury*. Accessed: November 11, 2016. Retrieved from: <https://www.cdc.gov/chronicdisease/resources/publications/aag/pdf/2015/alcohol-aag.pdf>

**Indian tribe:** The National Historic Preservation Act of 1966 defines an Indian tribe as “an Indian tribe, band, nation, or other organized group or community, including a Native village, Regional Corporation or Village Corporation, as those terms are defined in section 3 of the Alaska Native Claims Settlement Act (43 USC § 1602), which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians” (16 USC § 470(w)).

**indirect effect:** Effects that are further removed in time or space and diminish some aspect of the historic property, but may not physically alter it.

**inferred properties (soils):** Soil properties that are inferred from the combined data of soil science and other disciplines such as meteorology.

**infiltration basins:** Infiltration basins (also known as recharge basins) are considered a treatment BMP because they can remove pollutants from surface discharges by capturing the storm water runoff volume (typically, larger volumes than an infiltration trench) and infiltrating it directly to the soil rather than discharging it to an aboveground drainage system.

**informed siting of Proposed Action features:** Refers to the act of locating activities or features in areas that do not support listed species or their known habitats.

**infrastructure:** Consists of the systems and physical structures that enable a population in a specified area to function. Infrastructure includes a broad array of facilities such as utility systems, streets and highways, railroads, airports, buildings and structures, ports, harbors, and other manmade facilities.

**injurious wildlife:** Any animal species or subspecies (except game birds or game mammals) known to be harmful to agriculture, aquaculture, indigenous wildlife or plants, or constituting a nuisance or health hazard, as listed in the *List of Species of Injurious Wildlife in Hawaii, Exhibit 5, Chapter 13-124*, State of Hawaii, Division of Forestry and Wildlife.

**insectivorous:** To feed on insects, worms, and other invertebrates.

**intermittent stream:** Streams that carry water for part of the year (generally winter and spring).

**invasive species:** Introduced species that out-compete native species for space and resources.<sup>10</sup>

**island arc:** A type of archipelago with an arc-shaped alignment. Island arcs are typically of volcanic origin.

**jurisdictional wetlands:** Jurisdictional wetlands are wetlands that are found to be “waters of the U.S.” per definitions presented in the Clean Water Act, and are thus under the jurisdiction of the U.S. Army Corps of Engineers.

**juvenile:** An organism that has not reached sexual maturity.

**karst:** Terrain with distinctive landforms and hydrology created from soluble rock dissolution and characterized by springs, caves, sinkholes, and unique hydrogeology.<sup>11</sup>

---

<sup>10</sup> National Oceanic and Atmospheric Administration. 2006. *NOAA Fisheries Glossary*. NOAA Technical Memorandum NMFS-F/SPO-69. October 2005. Revised Edition, June 2006.

**Kona winds:** Kona winds are stormy, rain-bearing winds that blow over the Hawaiian Islands from the southwest or south-southwest in the opposite direction of trade winds. Kona winds occur when a low-pressure center is within 500 miles northwest of the islands. Although strong, Kona winds usually do not last for more than a day or so.

**lagomorphs:** Gnawing mammals that feed on plants and have fully furred feet and two pairs of incisors in the upper jaw.

**land subsidence:** The downward settling or sudden sinking of the Earth's surface.

**land use/land cover:** Refers to the use of land, as visible from the air (or satellites).

**landslide:** Refers to processes that lead to the downhill movement of earth materials due to gravity and other forces.

**lane miles:** Refers to the length of a roadway multiplied by the number of traffic lanes.<sup>12</sup>

**latte:** Large limestone or basalt pillars topped with a capstone.

**lava tubes:** Lava tubes are natural conduits through which lava travels beneath the surface of a lava flow.<sup>13</sup>

**leeward:** On the side sheltered from the wind (downwind).

**life cycle:** The continuous sequence of an organism's development.

**limestone:** A sedimentary rock consisting of calcium carbonate that can be deposited either by direct precipitation out of sea water or by biochemical processes such as coral reefs that secrete calcium carbonate as part of their structure.

**limiting distance:** Distances beyond which an adverse effect would not occur.

**listed wildlife:** Any animal listed as threatened or endangered by federal or state agencies.

**littoral:** Refers to shore or near-shore areas.

**maintenance area:** An area that was previously in nonattainment, but has met the national primary or secondary ambient air quality standards for the pollutant, and has been designated as in attainment.

**mammal:** A warm-blooded vertebrate that gives birth to, and nurses, live young; has highly evolved skeletal structures; is covered with hair at some stage of development; and has two pairs of limbs (except some aquatic mammals).

**manganese nodules:** Nodular concretions of manganese and iron oxides that occur on the ocean floor as a result of direct precipitation of minerals from seawater.

**manholes:** A small covered opening in a street or other surface that allows a person access, usually to utilities. Manholes may be used for telecommunications activities, especially in cities and urban areas, depending on the location of other utilities; in cities, utility lines are often co-located.

**marine:** Of, or relating to, the sea.

**marine debris:** Any manmade object discarded, disposed of, or abandoned that enters the marine environment.

**marine intertidal:** Areas of open ocean associated with high energy coastline where the substrate is exposed and flooded by tides.<sup>14</sup>

**masonry cement:** A mix, typically of Portland cement, hydrated lime, and other materials used to improve the water retention and workability of cement in masonry work.

**maternity roosts:** Locations where bats congregate to birth and rear young. Maternity roosts are often located in trees, under manmade structures (e.g., bridges, rooftops, etc.), or in caves.

**mesic soil:** A medium-wet soil condition.

**metamorphic processes:** A process that involves profound physical and or chemical change in rocks due to heat and pressure.

**montane:** Mountainous areas.

**montane bogs:** bogs occurring in mountainous regions.

**moraine:** Unstratified and unsorted sediment deposits formed through direct action of, or contact with, glacier ice. Many different varieties are recognized depending on their position with respect to a glacier.

**muskeg:** North American swamp or bog consisting of a mixture of water and partly dead vegetation, frequently covered by a layer of sphagnum or other mosses.

**Native Hawaiian:** The National Historic Preservation Act of 1966 defines Native Hawaiian as “any individual who is a descendant of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in the area that now constitutes the State of Hawaii” (16 USC § 470(w)(17)).

**Native Hawaiian Organization:** The National Historic Preservation Act of 1966 defines a Native Hawaiian organization as “any organization which serves and represents the interests of Native Hawaiians; has as a primary and stated purpose the provision of services to Native Hawaiians; and has demonstrated expertise in aspects of historic preservation that are significant to Native Hawaiians. The term includes, but is not limited to, the Office of Hawaiian Affairs of the State of Hawaii and Hui Malama I Na Kupuna O Hawai’i Nei, an organization incorporated under the laws of the State of Hawaii” (16 USC § 470 (w)(18)).

**noise:** A form of sound caused by pressure variations that the ear can detect; often defined as unwanted sound.

**nonattainment area:** Any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national primary or secondary ambient air quality standard for the pollutant.

---

<sup>14</sup> Cowardin, L.M., V. Carter, F.C. Golet, E.T. LaRoe. 1979. *Classification of Wetlands and Deepwater Habitats of the United States*. U.S. Fish and Wildlife Service Report No. FWS/OBS-79/31. Washington, D.C.

**nonpoint source pollution:** Any source of water pollution that does not meet the legal definition of “point source”, and includes runoff from rain or snowmelt that picks up natural and manmade pollutants, such as fertilizers, oils, salt, bacteria, and others that are eventually deposited into lakes, rivers, streams, wetlands, coastal water, and groundwater (33 USC § 1251 *et seq.*).

**noxious plant:** As defined in the Federal Noxious Weed Act of 1974, a noxious plant is any living stage (e.g., seeds and reproductive parts) of any parasitic or other plant of a kind, or subdivision of a kind, which is of foreign origin, is new to, or not widely prevalent in, the U.S., and can directly or indirectly injure crops, other useful plants, livestock, poultry, other interests of agriculture including irrigation, navigation, U.S. fish and wildlife resources, or public health.

**obligate:** Means “by necessity”; restricted to one particularly characteristic life mode.

**ocean convergence zone:** The relatively horizontal flow of ocean water toward a common destination from different directions. When ocean waters come together at a point or along a line (convergence line), the denser water coming from one direction sinks under the lighter water coming from the other direction. The ocean convergence lines include the polar, subtropical, tropical, and equatorial.

**orographic effect:** A change in atmospheric conditions caused by a change in elevation, primarily due to mountains.

**outwash:** The deposit of sand, silt, and gravel formed below a glacier by meltwater streams and rivers. An outwash plain is an extensive, relatively flat area of these glacial deposits.

**Pacific plate:** A tectonic plate located within portions of the Pacific Ocean.

**paleontological resources:** Fossils that are the physical remains of plants and animals that have mineralized into or left impressions in solid rock or sediment.

**palustrine emergent wetland:** All nontidal wetlands dominated by persistent herbaceous plants, mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean-derived salts is below 0.5 parts per thousand.

**palustrine wetlands:** Wetlands that include all nontidal wetlands dominated by trees, shrubs, persistent emergent, emergent mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean-derived salts is below 0.5 parts per thousand.

**parent material:** The original geologic source material from which a soil has formed; parent material influences soil properties, including color, texture, and ability to hold water.

**passerines:** An order of “perching” birds that have four toes, three facing forward and one backward, which allows the bird to easily cling to both horizontal and nearly vertical perches.

**pelagic:** Anything that inhabits the water column as opposed to being associated with the sea floor, generally occurring anywhere from the surface to 1,000 meters.<sup>15</sup>

**peneaeid shrimp:** A family of marine crustacean that includes some of the most commercially valuable species (e.g., tiger prawn).

---

<sup>15</sup> NOAA (National Oceanic and Atmospheric Administration). 2006. *NOAA Fisheries Glossary*. NOAA Technical Memorandum NMFS-F/Spo-69. U.S. Department of Commerce. Accessed: August 8, 2015. Retrieved from: <https://www.st.nmfs.noaa.gov/st4/documents/FishGlossary.pdf>

**perched groundwater:** An aquifer that occurs above the regional water table, separated by an impermeable or relatively impermeable layer of rock or sediment.

**perennial stream:** Streams that normally have surface flow year-round in all or part of their course. Non-perennial streams are normally dry during part of the year.

**permeability:** A property of a material that allows liquids or gases to pass through it.

**phenology:** The seasonal changes in plant and animal life cycles, such as emergence of insects or migration of birds.

**photic zone:** Zone within which light penetrates below the ocean surface.

**physiography:** Refers to the description of the Earth's landforms and surface features.

**piggery:** Pig farms.

**pinniped:** Widely distributed and diverse group of fin-footed, semiaquatic marine mammals; commonly known as seals.

**plant associations:** Plant communities of a specific type (or types) and geography (or geographies).

**plateau:** A large area of elevated plain, tableland, or flat-topped region.

**plutonic rocks:** Rocks formed from cooling magma below the Earth's surface.

**point source pollution:** Section 502 (14) of the Clean Water Act defines point source pollution as pollution that comes from "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged."

**points of presence:** Connections or access points between two different networks, or different components of one network.

**population:** Interbreeding organisms occupying a certain space; the number of people or other living creatures in a designated area.

**Portland cement:** Cement that is made from limestone and clay that turns to a paste and hardens with water.

**predation:** The relationship between two organisms of different species in which one of them acts as predator that captures and feeds on the other organism that serves as the prey.

**predatory open-access journal:** Predatory journals are issued by publishers that "are characterized by various levels of deception and lack of transparency in their operations...they may claim a stringent peer-review where none really exists".<sup>16</sup> Open access journals are available online and require no fee or membership; they are accessible to anyone who has access to the internet.

**prehistoric sites:** The physical evidence of human activity that occurred prior to European contact.

---

<sup>16</sup> Elliott, Carl. 2012. *On Predatory Publishers: a Q&A with Jeffrey Beall*. Brainstorm Blog--The Chronicle of Higher Education. June 5, 2012. Accessed: June 2016. Retrieved from: <http://www.chronicle.com/blogs/brainstorm/on-predatory-publishers-a-qa-with-jeffrey-beall/47667>

**Prevention of Significant Deterioration increment:** The maximum allowable increase in pollutant concentration that is allowed to occur above a baseline concentration for a pollutant.

**prime farmland:** Land that possesses the required characteristics for producing food, feed, fiber, and oilseed crops.

**procellariiform:** An order of seabirds that includes albatrosses and petrels.

**proposed species:** Species that have been proposed for listing as threatened or endangered in the *Federal Register* after the completion of a status review and consideration of other protective conservation measures.

**public safety answering points:** Call centers responsible for answering calls to an emergency telephone number for police, fire, and emergency medical services.

**public safety entity:** An entity that provides public safety services (*47 USC § 1401(26)*).

**public safety infrastructure:** Any infrastructure used by a public safety entity as defined in the Middle Class Tax Relief and Job Creation Act of 2012, including infrastructure associated with police, EMS, and fire services.

**pupping grounds:** Sites where marine mammals birth and rear their young.

**radiant flux:** The amount of energy per unit time radiated from a source.

**radiative forcing index:** Radiative forcing is the difference between the radiation absorbed by Earth and the energy reflected back to space.

**radio frequency emissions:** Refers to radio frequency radiation emitted by devices.

**radio frequency radiation:** “Electromagnetic radiation in the frequency ranges 3 kilohertz (kHz) - 300 Megahertz (MHz), and 300 MHz - 300 gigahertz (GHz), respectively.”<sup>17</sup>

**recovery:** A population or community’s partial or full return to a previous condition before a stressor was introduced.

**recreational fishery:** Fishing when the catch is for personal use, pleasure, or competition.

**recruitment:** The number of new individuals reaching reproductive age in a given population over a given time interval (typically measured over a year).

**redundancy:** The duplication of equipment or processes to help maintain continuity of operations.

**refugia:** An area of stable environmental conditions that protects wildlife and organisms from environmental change.

**Rhus:** A specific genus of vines, shrubs, or small trees native to temperate and warm regions.

**riparian zone:** Areas near wetlands, rivers, or streams.

**rock ripping:** The breakup and removal of rock material with heavy equipment such as an excavator.

**runup:** The height the wave reaches above sea level before washing to shore.

---

<sup>17</sup> Occupational Health and Safety Administration. Undated. *Radiofrequency and Microwave Radiation*. Retrieved from: <https://www.osha.gov/SLTC/radiofrequencyradiation/>

**rutting (soil):** Soil indentations caused by equipment operation in moist conditions or in soils with lower bearing strength. See soil rut.

**sedimentary rocks:** Rocks formed by the deposition of material at the Earth's surface and within bodies of water.

**Selective Catalytic Reduction:** Add-on nitrogen dioxides control placed in the exhaust stream following the engine and involves injecting ammonia into the flue gas. The ammonia reacts with the nitrogen dioxides in the presence of a catalyst to form water and nitrogen.

**sessile:** Unable to move; attached to the substrate.<sup>18</sup>

**shield volcano:** A volcano that is above the ocean surface, has broad and gentle slopes, and is composed of fluid basalt.

**short ton:** One short ton is equal to 2,000 pounds.

**silt curtain:** Floating barrier used in marine construction, dredging, and remediation to control silt and sediment in a body of water.

**silt fence:** Designed to trap sediment in the area where construction or soil disturbance is taking place to minimize or avoid soil erosion and sedimentation. The fence is typically 2- to 3-feet tall, buried 8 to 12 inches into the soil, and secured with stakes.

**Sirenian:** An order of fully aquatic, herbivorous mammals that inhabit swamps, rivers, estuaries, marine wetlands, and coastal marine waters.

**site fidelity:** The tendency of an animal to return to a previously occupied location.

**sky glow:** The overall diffusion of artificial light into the sky.

**smolt:** A young fish undergoing its first migration from freshwater to the ocean.

**soarer:** A bird that flies to a considerable altitude and maintains elevation without moving its wings by using ascending air currents.

**soft ground conditions:** A soft site exists where noise travels away from the source over porous ground or normal unpacked earth capable of absorbing noise energy such as grass, trees, or other ground surfaces suitable for the growth of vegetation, such as farmland.

**soil rut:** A sunken track or groove made by vehicle or equipment activity. See rutting.

**sole-source aquifer:** An aquifer that supplies at least 50 percent of the drinking water consumed in the area overlying the aquifer.

**species diversity:** An ecological measure of the variety of organisms present in an ecological community including the richness (number of species) and abundance (number of individuals of each species).

**storm water filtration:** Use of a filtering media (sand, soil, gravel, peat, or compost) in storm water filtration structures to remove pollutants from storm water runoff.

**stratovolcanoes:** Also called composite volcanoes, are cone-shaped and consist of alternate layers of lava and other volcanic material such as ash.

---

<sup>18</sup> National Oceanic and Atmospheric Administration. 2006. *NOAA Fisheries Glossary*. NOAA Technical Memorandum NMFS-F/SPO-69. October 2005. Revised Edition, June 2006.

**stream reach:** Any specified length of a stream.

**submarine volcano:** Volcanoes that occur beneath the ocean surface.

**subsistence fishery:** Fishing when the catch is shared and consumed directly by the families and kin of the fishermen, rather than being sold.

**substrate:** Material such as sand and cobble that is associated with or occurs on the bottom of a body of water.<sup>19</sup>

**subwatershed:** USGS subwatershed refers to the USGS 12-digit hydrologic unit code (HUC12), which averages approximately 40 square miles, depending on the region.

**succession:** A gradual process of a plant or animal community successively giving way to another until a stable state is reached.

**suicide contagion:** Direct or indirect exposure to suicide or suicidal behaviors within one's family, peer group, or media reports that can result in an increase in suicide or suicidal behaviors, especially in adolescents and young adults.<sup>20</sup>

**symbiont:** Two organisms that live in symbiosis (mutually beneficial relationship) with one another. Algae species are symbionts with corals.

**take:** *Take* is defined differently by various federal and state regulations, but the most commonly accepted definition is that of the U.S. Endangered Species Act that defines take as "to harass, harm, pursue, hunt, shoot, wound, trap, capture, collect or attempt to engage in any such conduct."

**taxonomic group:** A group of biological organisms that have shared characteristics.

**taxonomy:** Science of naming and classifying organisms or specimens.

**tectonic plate:** The solid pieces of rock (or earth) that collide, move apart, or slide past each other over geologic time.

**tectonism:** Forces affecting the structural deformation, uplift, and movement of the earth's crust.

**temperate forest:** Forests found in regions with mild climates that receive heavy rainfall.

**terrestrial:** Of, or related to, the land.

**thermokarst:** The process by which landforms result from the thawing of ice-rich permafrost or the melting of ice.<sup>21</sup>

**threatened species:** According to the Endangered Species Act, a *threatened* species is any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

**time (soils):** Soil properties are dependent on the period over which other processes act on them.

**tonne:** One tonne is a unit of measure in the International System of Units that is equivalent to 1 metric ton and equivalent to 1.1023 U.S. tons, which are also known as short tons.

**topography:** The unique features and shapes of the land (e.g., valleys and mountains).

**Total Maximum Daily Load:** Maximum pollutant amount a waterbody can receive while still meeting water quality standards.

**total radiative forcing:** The difference between the visible light absorbed by Earth and the energy reflected back to space.

**trachyte:** A type of fine-grained volcanic rock.

**traditional cultural property:** A place “eligible for inclusion in the NRHP because of its association with cultural practices or beliefs of a living community that (a) are rooted in that community’s history, and (b) are important in maintaining the continuing cultural identity of the community.”<sup>22</sup>

**translocation:** The capture, transport, and release (or introduction) from one location to another.

**trophic:** The feeding habits or relationships of different organisms in a food chain or food web.<sup>23</sup>

**trophic structure:** The way organisms utilize food resources leading to energy transfer within an ecosystem.<sup>24</sup>

**tsunami:** Large ocean waves that form as a result of water displacement.

**tundra:** A vast, flat, treeless Arctic region of Europe, Asia, and North America in which the subsoil is permanently frozen.

**turbidity:** A measure of the clarity of a liquid. When many fine particles are suspended in water, the turbidity is high.

**U.S. Exclusive Economic Zone:** The U.S. Exclusive Economic Zone is a 200-mile ocean boundary around the coastline of U.S. states and territories in which the U.S. asserts exclusive commercial fishing rights.

**ultra-high frequency:** The UHF band covers frequencies ranging from 300 MHz to 3000 MHz.

**unclassified area:** Any area that cannot be classified on the basis of available information as meeting the national primary or secondary air quality standard for a pollutant.

**understory:** The forest layer of smaller trees and shrubs that grows under the taller tree canopy, replacing the older trees as they die.

**ungulate:** The classification of mammals having hooves.

**unicameral legislature:** A legislature consisting of one chamber (a single house, for example).

**unincorporated territory:** In U.S. law, an unincorporated territory is an area controlled by the U.S. government “where fundamental rights apply as a matter of law, but other constitutional rights are not available.”<sup>25</sup>

**urban:** Densely developed residential, commercial, and other non-residential areas.

**urban electronic noise:** An area with a concentration of cell phone towers and users, which by sheer volume and level of use, creates a zone of electromagnetic noise.

**vascular plants:** Plants that possess conducting tissues to transport nutrients and water throughout the plant.

**vector:** An organism that carries and transmits an infectious pathogen to another living organism.

**vernal pools:** Formed in basin depressions and are ponded only during the wetter part of the year; also known as ephemeral pools.<sup>26</sup>

**very high frequency:** The VHF band covers frequencies ranging from 30 MHz to 300 MHz.

**visual landscape:** What observers can readily see from a given vantage point.

**water resources:** Surface waterbodies and groundwater systems, including streams, rivers, lakes, canals, ditches, estuarine waters, floodplains, aquifers, wetlands, and other aquatic habitats.

**watershed:** USGS watershed refers to the USGS 10-digit hydrologic unit code (HUC10), which averages approximately 230 square miles, depending on the region.

**wetland alternation:** Any changes where the area remains a wetland and is not lost or converted, but the impacts cause a change in the type of wetland or a decrease in wetland function.

**wetland loss or conversion:** The actual loss of wetland habitat due to fill or conversion to a non-wetland habitat.

**wetlands:** Wetlands generally include swamps, marshes, bogs and similar areas. The USEPA defines wetlands as areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

## INVITED COOPERATING AGENCIES

The following is a list of agencies invited to become cooperating agencies:

- Advisory Council on Historic Preservation
- Environmental Protection Agency
- Executive Office of the President—Council on Environmental Quality
- Federal Communications Commission (accepted invitation)
- General Services Administration (accepted invitation)
- U.S. Army Corps of Engineers
- U.S. Department of Agriculture
- U.S. Department of Agriculture—Farm Service Agency
- U.S. Department of Agriculture—Natural Resources Conservation Service (accepted invitation)
- U.S. Department of Agriculture—Rural Utilities Service (accepted invitation)
- U.S. Department of Agriculture—U.S. Forest Service (accepted invitation)
- U.S. Department of Commerce—National Marine Fisheries Service
- U.S. Department of Commerce—National Oceanic and Atmospheric Administration
- U.S. Department of Commerce—National Telecommunications and Information Administration (accepted invitation)
- U.S. Department of Commerce—National Weather Service
- U.S. Department of Defense—Department of the Air Force (accepted invitation)
- U.S. Department of Defense—National Guard Bureau
- U.S. Department of Defense—Operational Environmental Planning and Readiness
- U.S. Department of Energy (accepted invitation)
- U.S. Department of Health and Human Services
- U.S. Department of Health and Human Services—Centers for Disease Control and Prevention
- U.S. Department of Homeland Security (accepted invitation)
- U.S. Department of Homeland Security—Federal Emergency Management Agency (accepted invitation)
- U.S. Department of Homeland Security—U.S. Coast Guard (accepted invitation)

- U.S. Department of Homeland Security—U.S. Customs and Border Protection (accepted invitation)
- U.S. Department of Justice—Federal Bureau of Investigation
- U.S. Department of Justice—Natural Resources Section
- U.S. Department of the Interior—Bureau of Indian Affairs
- U.S. Department of the Interior—Bureau of Land Management
- U.S. Department of the Interior—Bureau of Reclamation
- U.S. Department of the Interior—National Park Service
- U.S. Department of the Interior—Office of Environmental Affairs
- U.S. Department of the Interior—U.S. Fish and Wildlife Service
- U.S. Department of the Interior—U.S. Geological Survey
- U.S. Department of Transportation—Federal Aviation Administration
- U.S. Department of Transportation—Federal Highway Administration
- U.S. Department of Transportation—Federal Railroad Administration

## **APPENDIX B**

### **First Responder Network Authority Nationwide Public Safety Broadband Network Programmatic Environmental Impact Statement Scoping Summary Report**

-Page Intentionally Left Blank-

## **FirstNet Nationwide Public Safety Broadband Network Programmatic Environmental Impact Statement**

### **Scoping Summary Report**

#### *Overview*

The First Responder Network Authority (FirstNet), an independent authority within the Department of Commerce, is preparing five regional Programmatic Environmental Impact Statements (PEIS) to evaluate the potential impacts of establishing of a nationwide public safety broadband network (NPSBN) based on a single national network architecture. Title VI of the Middle Class Tax Relief and Job Creation Act of 2012 § 6203(f), *Pub. L. No. 112-96, 126 Stat. 156 (2012) (codified at 47 USC § 1401 et seq.)* charges FirstNet with taking all actions necessary to ensure the building, deployment, and operation of NPSBN, by, at a minimum:

- Ensuring nationwide standards for use and access to the network;
- Issuing open, transparent, and competitive requests for proposals to the private sector;
- Encouraging use of existing commercial wireless infrastructure to speed deployment; and
- Managing and overseeing the implementation and execution of contracts or agreements with non-Federal entities to build, operate, and maintain the network.

FirstNet has determined that a PEIS is the appropriate level of environmental review (at this point in the process prior to having site-specific projects) under the National Environmental Policy Act of 1969 (NEPA). FirstNet will use the NEPA planning process to encourage agency and public involvement in the review of the proposed projects. Public involvement allows for full and fair discussion of the project scope and potential environmental impacts. The procedural aspects of NEPA promote better decision-making by providing a means for open communication between FirstNet and the public.

The Council of Environmental Quality regulations (*40 CFR §§ 1500-1508*) provide guidance on opportunities for public participation. Public participation activities include providing notice to potentially interested parties, holding public meetings, soliciting comments, and making the PEISs available to the public. This report provides an overview of the FirstNet PEIS scoping activities, including the public scoping meetings and comments received during the comment period.

### *Public Notification*

On November 12, 2014, FirstNet published a Notice of Intent (NOI) in the *Federal Register* to prepare five coordinated PEISs (79 FR § 67156 [November 12, 2014]). This initiated a 45-day scoping comment period that ended on December 29, 2014. The NOI, provided in **Attachment A**, stated that FirstNet would be developing regional PEISs and solicited input from the public on potential concerns associated with the Proposed Action and the purpose and need, and provided background information on the project. The NOI also included an announcement of PEIS scoping meetings.

FirstNet placed advertisements in local newspapers to invite the public to the scoping meetings, identifying the dates and locations. Publication of the notices occurred in the following papers:

- Washington Post and Washington Post Express (November 23, 2014)
- Honolulu Star-Advertiser (November 30, 2014)
- San Francisco Chronicle (November 30, 2014)
- Arizona Republic and Arizona Daily Star (November 30, 2014)
- Kansas City Star (December 7, 2014)
- The Times-Picayune (December 7, 2014)
- New York Times (December 14, 2014)

Copies of the newspaper notices are included in **Attachment B**.

### *Scoping Meetings*

FirstNet held seven in-person scoping meetings throughout the nation. These meetings provided the general public and interested stakeholders opportunities to learn about the Proposed Action, talk directly with FirstNet environmental staff, and provide input regarding the scope of the analysis and alternatives. Organized as informal gatherings, the scoping meetings provided the public with an opportunity to learn about FirstNet, alternative ways to implement the NPSBN that will be analyzed in the PEISs, and the overall NEPA process. The meetings also provided the public with the opportunity to give comments and input to the FirstNet team. FirstNet held scoping meetings at the following locations:

- *Washington, D.C.* - Tuesday, November 25, 2014; 4-8 p.m.  
Department of Commerce lobby, 1401 Constitution Avenue NW, Washington, DC 20230
- *Honolulu, HI* - Tuesday, December 2, 2014; 4-8 p.m.  
Neal Blaisdell Center, 777 Ward Avenue, Honolulu, HI 96814
- *San Francisco, CA* - Thursday, December 4, 2014; 4-8 p.m.  
Holiday Inn Civic Center, 50 Eighth Street, San Francisco, CA 94103
- *Tucson, AZ* - Thursday, December 4, 2014; 4-8 p.m.  
Embassy Suites – Williams Center, 5335 E. Broadway Boulevard, Tucson, AZ 85711

- *Kansas City, MO* - Tuesday, December 9, 2014; 4-8 p.m.  
Kansas City University of Medicine and Biosciences, Classroom Annex Building,  
Classroom A, 1750 East Independence Avenue, Kansas City, MO 64106
- *New Orleans, LA* - Thursday, December 11, 2014; 5-9 p.m.  
Loyola University, Thomas Hall, 6363 St. Charles Avenue, New Orleans, LA 70118
- *New York, NY* - Monday, December 15, 2014; 4-8 p.m.  
New York University, Kimmel Center Grand Hall, 60 Washington Square South,  
New York, NY 10012

Each scoping meeting included a poster session that allowed individuals to review posters describing the Proposed Action, purpose and need, alternatives considered, geographic scope, and the NEPA process. The posters and handouts provided at the meetings are included in **Attachment C**. At each meeting, attendees could fill out a comment card and sign up for the distribution list.

Attendance lists from the meetings are included in **Attachment D** (redacted due to personal information provided). Nineteen people attended the seven scoping meetings. FirstNet received written comments from 48 individuals and organizations (one commenter submitted two comments). Table 1 provides the breakdown of comments received for each meeting and during the scoping comment period. Comments received both via U.S. Postal Service mail and electronically (email) were counted once as U.S. Postal Service.

### *Summary of Comments*

The public and local agencies raised several concerns during the scoping comment period. FirstNet reviewed the comments received and grouped them by resource area or PEIS topic. Table 2 summarizes the general concerns raised during scoping.

**Table 2. Summary of Comments Received during Scoping**

| Issues/Concerns                                                                                                                                                                                                                                   |

| <ul style="list-style-type: none"> <li>Agencies to provide FirstNet with contacts within their local organizations and trade organizations</li> </ul>                                                                                             |
| <ul style="list-style-type: none"> <li>Concern that placement of towers would impact historic/recreational/ecological study use of a specific area (i.e., new tower in Tucson, AZ at/on Tumamoc Hill or in/near the historic district)</li> </ul> |

Table 3 provides a summary of the comments received from federal agencies, state agencies, and local government organizations; comments are paraphrased and condensed from the actual comments. The environmental analysis included in the PEIS will rely on the full text of the comments as submitted. Original copies of the comments received are included in **Attachment E** (redacted due to personal information). **Attachment F** provides text of comments received and FirstNet responses.

**Table 3. Summary of Comments Received from Federal, State, and Local Government**

Federal Register

Vol. 79, No. 218

Wednesday, November 12, 2014

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

## DEPARTMENT OF COMMERCE

### Census Bureau

#### Proposed Information Collection; Comment Request; Survey of Housing Starts, Sales, and Completions

**AGENCY:** U.S. Census Bureau, Commerce.

**ACTION:** Notice.

**SUMMARY:** The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

**DATES:** To ensure consideration, written comments must be submitted on or before January 12, 2015.

**ADDRESSES:** Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at [jjessup@doc.gov](mailto:jjessup@doc.gov)).

**FOR FURTHER INFORMATION CONTACT:** Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Erica Filipek, U.S. Census Bureau, MCD, CENHQ Room 7K057, 4600 Silver Hill Road, Washington, DC 20233, telephone (301) 763-5161 (or via the Internet at [Erica.Mary.Filipek@census.gov](mailto:Erica.Mary.Filipek@census.gov)).

#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

The U.S. Census Bureau plans to request a three-year extension of the current Office of Management and Budget (OMB) clearance of the Survey of Housing Starts, Sales and Completions, also known as the Survey of Construction (SOC). The SOC collects

monthly data on new residential construction from a sample of owners or builders. The Census Bureau uses the Computer-Assisted Personal Interviewing (CAPI) electronic questionnaires SOC-QI/SF.1 and SOC-QI/MF.1 to collect data on start and completion dates of construction, physical characteristics of the structure (floor area, number of bathrooms, type of heating system, etc.), and if applicable, date of sale, sales price, and type of financing. The SOC provides widely used measures of construction activity, including the economic indicators Housing Starts and Housing Completions, which are from the New Residential Construction series, and New Residential Sales.

We sample about 1,700 new buildings each month (20,400 per year). We inquire about the progress of each building multiple times until it is completed (and a sales contract is signed, if it is a single-family house that is built for sale). For single-family buildings, we conduct an average of 8.17 interviews and for multifamily buildings, we conduct an average of 7.0 interviews. The total number of interviews conducted each year for single-family buildings is about 107,844 and for multifamily buildings is about 50,400. Each interview takes 5 minutes on average. Therefore, the total annual burden is 13,187 hours.

##### II. Method of Collection

The Census Bureau uses its field representatives to collect the data. The field representatives conduct interviews to obtain data.

##### III. Data

*OMB Control Number:* 0607-0110.  
*Form Number(s):* SOC-QI/SF.1 and SOC-QI/MF.1.

*Type of Review:* Regular submission.  
*Affected Public:* Individuals or households, business, or other for-profit institutions.

*Estimated Number of Respondents:* 20,400.

*Estimated Time per Response:* 5 minutes.

*Estimated Total Annual Burden Hours:* 13,187.

*Estimated Total Annual Cost to Public:* The estimated cost to the respondent is \$404,841 based on an average hourly pay for the respondent of \$30.70. This estimate was taken from the Department of Labor, Bureau of

Labor Statistics, Occupational Employment Statistics Survey for 2013.  
*Respondent's Obligation:* Voluntary.  
*Legal Authority:* Title 13 U.S.C. 182.

##### IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: November 6, 2014.

## DEPARTMENT OF COMMERCE

### National Telecommunications and Information Administration

#### First Responder Network Authority

[Docket Number: 141104926-4926-01]

RIN 0660-XC014

#### Notice of Intent To Prepare Programmatic Environmental Impact Statements and Conduct Scoping for the Nationwide Public Safety Broadband Network

**AGENCY:** First Responder Network Authority, National Telecommunications and Information Administration, U.S. Department of Commerce.

**ACTION:** Notice of Intent.

**SUMMARY:** The First Responder Network Authority ("FirstNet") announces its intent to prepare five regional

Programmatic Environmental Impact Statements (“PEISs”) and conduct public scoping meetings to evaluate the potential environmental impacts of the proposed nationwide public safety broadband network. The specific locations, dates, and times for the scoping meetings will be announced on the FirstNet Web site, no later than one week prior to each meeting.

**DATES:** The scoping period for this notice will begin on the date of publication of this notice and will end December 29, 2014. Comments to this notice must be submitted on or before December 29, 2014.

**ADDRESSES:** The public is invited to submit written comments to this Notice. Written comments may be submitted electronically via email to [PEIScomments@firstnet.gov](mailto:PEIScomments@firstnet.gov) or by mail (to the address listed in **FOR FURTHER INFORMATION CONTACT**). Comments received will be made a part of the public record and may be posted to FirstNet’s Web site ([www.firstnet.gov](http://www.firstnet.gov)) without change. Comments should be machine readable and should not be copy-protected. All personally identifiable information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business

information or otherwise sensitive or protected information.

**FOR FURTHER INFORMATION CONTACT:** Amanda Pereira, NEPA Coordinator, First Responder Network Authority, National Telecommunications and Information Administration, U.S. Department of Commerce, 12201 Sunrise Valley Drive, M/S 243, Reston, VA 20192.

**SUPPLEMENTARY INFORMATION:** The Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96, Title VI, 126 Stat. 256 (codified at 47 U.S.C. 1401 *et seq.*)) (the “Act”) created and authorized FirstNet to take all actions necessary to ensure the building, deployment, and operation of an interoperable, nationwide public safety broadband network (“NPSBN”) based on a single, national network architecture. The Act meets a long-standing and critical national infrastructure need, to create a single, nationwide network that will, for the first time, allow police officers, fire fighters, emergency medical service professionals, and other public safety entities to effectively communicate with each other across agencies and jurisdictions.

The National Environmental Policy Act of 1969 (42 U.S.C. 4321–4347) (“NEPA”) requires federal agencies to

undertake an assessment of environmental effects of their proposed actions prior to making a final decision and implementing the action. NEPA requirements apply to any federal project, decision, or action that may have a significant impact on the quality of the human environment. NEPA also establishes the Council on Environmental Quality (“CEQ”), which issued regulations implementing the procedural provisions of NEPA (see 40 CFR parts 1500–1508). Among other considerations, CEQ regulations at 40 CFR 1508.28 recommend the use of *tiering* from a “broader environmental impact statement (such as a national program or policy statements) with subsequent narrower statements or environmental analysis (such as regional or basin wide statements or ultimately site-specific statements) incorporating by reference the general discussions and concentrating solely on the issues specific to the statement subsequently prepared.”

Due to the geographic scope of FirstNet (all 50 states, the District of Columbia, and five territories) and the diversity of ecosystems potentially traversed by the project, FirstNet has elected to prepare five regional PEISs. The five PEISs will be divided as follows:

| East                                                                                                                                                                                                     | Central                                                                                                                                                                               | West                                                             | South                                                                                                                                                                 | Non-contiguous                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Delaware<br>District of Columbia<br>Connecticut<br>Maine<br>Maryland<br>Massachusetts<br>New Hampshire<br>New Jersey<br>New York<br>Pennsylvania<br>Rhode Island<br>Vermont<br>Virginia<br>West Virginia | Colorado<br>Illinois<br>Indiana<br>Iowa<br>Kansas<br>Michigan<br>Minnesota<br>Missouri<br>Montana<br>Nebraska<br>North Dakota<br>Ohio<br>South Dakota<br>Utah<br>Wisconsin<br>Wyoming | Arizona<br>California<br>Idaho<br>Nevada<br>Oregon<br>Washington | Alabama<br>Arkansas<br>Florida<br>Georgia<br>Kentucky<br>Louisiana<br>Mississippi<br>New Mexico<br>North Carolina<br>Oklahoma<br>South Carolina<br>Tennessee<br>Texas | Alaska<br>American Samoa<br>CNMI<br>Guam<br>Hawaii<br>Puerto Rico<br>U.S. Virgin Islands |

Once a PEIS is completed and a Record of Decision (ROD) is signed, the proposed FirstNet projects can begin to submit the site-specific environmental documentation to determine if the proposed project has been adequately evaluated in the PEIS or warrants a Categorical Exclusion, an Environmental Assessment, or an Environmental Impact Statement.

Dated: November 6, 2014.

# Made of mushrooms and wasp spit, the drone goes green

Students' plan could solve the mess made by crashing robots

BY RACHEL FELTMAN

A group of college students has created an environmentally friendly drone — think veggie leaver.

Led by one of NASA's synthetic biology experts, the students made an unmanned aerial vehicle almost entirely out of biodegradable materials. After a crash, these little fliers would basically disappear.

Drones can be a great help in dealing with environmental issues, flying into protected wooded areas to count the surviving population of an endangered animal, or over remote coral reefs to assess their condition.

But sometimes they can turn into litter: If a drone goes down in a protected area, it might not be possible for anyone to retrieve the hunk of metal and plastic.

"I have colleagues who do remote sensing in sensitive areas, and there was a UAV lost for a couple months in an area you really wouldn't want to lose one in," said Lynn Rothschild, of NASA's Ames Research Center.

Rothschild serves as an adviser for a team competing in the International Genetically Engineered Machine competition, and the issue of downed-drone litter seemed like a good one for her group to tackle.

"Normally I just give them free reign, but then there are 15 very bright students who all want to do 15 or 30 different things," she said. "So this year, I suggested an overall project. But they really just ran with it from there."

One of her students found a company called Ecovative. Design that was growing the team's dream material: Blocks of fungal foam.

Mushrooms are made up of a

structure called mycelium. It grows looking almost like a spider web when it's spread out, but it can grow to fit the confines it's placed in, eventually forming a tough chunk of foamy material. By putting mycelium into a mold filled with a tasty growing medium — like dead leaves or straw — you can create a custom-shaped mushroom block. Or in this case, a custom-shaped mushroom drone frame. A blast of heat kills the mycelium to stop its growth.

"You end up with this great material that just leftover fungal bits," Rothschild said. To make the frame more durable, the students created a bioplastic to coat it.

You can make a kind of veggie leather using bacteria that create cellulose — the tough stuff that creates cell walls in plants. The bacterial cellulose is grown in a sheet and harvested, then wrapped around the mycelium frame. When it dries, it's tough

and hard.

But the team's biohacking didn't stop there: They also harnessed the power of the insect world to keep their drone from dissolving in midair. The drone is covered in proteins cloof from paper wasp saliva, which the insects use to waterproof their nests.

For now, that's as far as the drone's biodegradability goes: It still uses a traditional rotor, battery and controls. But other

researchers around the world are working on creating biodegradable versions of these components, Rothschild said. And her team is investigating the use of biological sensors, which would allow them to replace some of the sensors on the drone with bacteria.

"Eventually, I'd say that most, if not all, of the drone could be made from biological materials," she said.

Rothschild is excited about the ways the drone could be used in research on Earth, but she has bigger plans for them, too: She has already submitted a proposal to NASA to push this technology forward for Mars missions. The lightweight, unobtrusive, home-grown nature of the robots would make them perfect for use on the red planet.

## Islamic State kills tribesmen in Iraq

REUTERS

BAGHDAD — Islamic State militants have killed at least 25 members of a Sunni Muslim tribe in a village on the eastern edge of the provincial capital Ramadi, local officials said Saturday in apparent revenge for tribal opposition to the radical Islamists.

They said the bodies of the men from the Abu Fahd tribe were discovered by the Iraqi army when it launched a counteroffensive against the Islamic State forces near the capital of Anbar province.

Last month, Islamic State fighters killed hundreds of members of the Abu Nimr tribe in Anbar in an attempt to break local resistance to their advances in the Sunni Muslim province they have largely controlled for nearly a year.

Islamic State, which has seized control of large parts of Syria and Iraq, continues to gain territory in Anbar despite three months of U.S.-led airstrikes.

## METRO AREA BRIEFS

## Police arrest suspect in Algiers shooting death

New Orleans police have arrested the man they say fatally shot a 50-year-old man Sunday night in Algiers. Jerome Bailey, 26, was picked up Wednesday at his mother's home in Marrero and booked with second-degree murder and aggravated battery. He is accused of killing Cornell Glover, according to police and court records. Authorities found Glover shot multiple times in the 3300 block of De Amies Street. Police created an "inmate participation" with helping detective Troell Murdock identify Bailey as the suspect and shooter. Bailey appeared in court Thursday, where records show his bond was set at \$650,000.

## Man found fatally shot in the 7th Ward

New Orleans police are investigating the shooting death of a man Saturday morning in the 7th Ward. The incident was reported before 7:30 a.m. in the 4500 block of North Roman Street. When officers arrived, they found an unidentified man fatally shot in the grass, police said. Dozens of people gathered at the block. A young woman consoled with grief and sobbed and wailed. "I can't see my husband. He promised he'd never leave me," homicide detective Joseph Alphonse said in a dispatch of the investigation. A police information officer said a call to CrimeStoppers at 504-822-1111.

## Victim ID'd in shooting near Tulane and Broad

Authorities on Friday identified the victim of a fatal shooting near New Orleans police headquarters. Ronald Rudek, 31, was shot multiple times Thursday night in the 2800 block of Gravier Street, according to the Orleans Parish Coroner's Office. Police found Rudek about 8:20 p.m. in the 2800 block of Gravier Street, near the Orleans Parish Criminal District Court house. He was taken to a hospital, where he was pronounced dead. Several yellow evidence markers dotted the sidewalk in front of a LaSalle Apartments, formerly home to the LaSalle brewery, as investigators searched for clues along Gravier. A group of four people lingered outside the yellow police tape, marveling at the apparent brazenness of shooting someone so close to police headquarters. "How could you feel safe when this building has a million cameras, and police are right here?" asked one of the onlookers, who wished to remain anonymous. "How can that be safe?"

## LaPlace man arrested for mailed marijuana

A LaPlace man has been jailed on a charge of receiving a pound of high-grade marijuana via the U.S. Postal Service, authorities said Friday. The marijuana was mailed from Los Angeles to a fictitious person at 51633rd Avenue and ended up at the LaPlace post office, according to the letter. The district attorney's office said the man was arrested on a search warrant for the package. After 35-year-old Alan Butcher collected it, he exceeded the warrant, arrested the man and arrested him Thursday. The state's Office of Attorney General said the man was charged with possession of marijuana, driving on a suspended license and driving without a rear-view mirror. He remained in custody Friday in lieu of a \$50,750 bond.

## Pedestrians targeted in armed robberies

New Orleans police are investigating three armed robberies that occurred over a four-hour period Friday night. Around 5:45 p.m. in the 4700 block of Poydras Street, two men approached the victims, ages 14 and 16, demanding their property. The teens complied, according to NOPD's major offense report. Three hours later, two suspects in a vehicle approached a man in the 3700 block of Baronne Street, seeking cash. The 36-year-old victim gave up his money and the perpetrators fled, according to police reports. The last incident was reported at 8:59 p.m. at Lombard and Poydras streets. Two suspects armed with handguns demanded property from two women and a man, police said. The suspects took a purse from a 17-year-old woman. Anyone with information is asked to call CrimeStoppers at 504-822-1111.

## Man wounded in drive-by

A 24-year-old man was wounded in a drive-by shooting on a 7th

Ward street Friday night. New Orleans police said. The incident was reported at 8:48 p.m. in the 1800 block of Lafayette Street. The victim said a vehicle pulled up and fired on him. He was struck in the leg and taken to a hospital by car, police said. On Saturday morning, police would return to the neighborhood after a man was found shot to death in the 5200 block of North Roman Street. Anyone with information should call CrimeStoppers at 504-822-1111.

## Teen accused of shooting up porch in Kenner

A teenager Friday shot up part about a porch on a Kenner man's porch except for his intended victim. Bullets struck the porch, the handrail, the garbage can and even the phone that the victim was holding, police said. The assault unfolded about noon in the 400 block of Warren Street. Police said a 75-year-old man was sitting on his porch when Darren "Damon" Thomas, 18, Apt. C, 350 West Napoleon Street, Kenner, began shooting at him. Thomas fled but was eventually found about a half mile away in the 1000 block of Farrar Avenue and arrested. The victim and other witnesses identified him as the gunman, police said. They booted him with a temporary restraining order. The gun was not found, but police said Thomas' hand rested on the porch railing. They were still investigating the motive for the shooting.

## Second suspect booked in Arondale burglary

The second suspect in an Arondale home burglary was identified Friday by the Jefferson Parish Sheriff's Office. Deputy Sheriff Michael Smith, 35, 445 Nicole Blvd., Arondale, said the suspect was identified as a man who had been seen leaving a Martini parlor after shooting property stolen in the burglary. Jefferson made the connection after the Sheriff's Office distributed an image from the parlor's surveillance camera, which identified the man. The man was identified as a man who was previously identified as Jameson Wood, 31, 601 West 1st Ave., Arondale, and anyone with information on his whereabouts was asked to call CrimeStoppers at 504-822-1111.

## Suspect nabbed blacks from store robbery

After a Kenner grocery store was robbed Wednesday afternoon, police chased down a suspect and arrested him four blocks away. They booked Tami McGee, 31, Apt. A, 1117 42nd St., Kenner, with simple robbery and resisting an officer. The robbery was reported at 4:25 p.m. at the Kenner levelers, 4103 Williams Blvd. Police said a customer was looking at a four-to-six percent behind the counter when he jumped onto the counter, snatched the product and ran out. Police said they found McGee running in the 3700 block of 42nd Street, chased him and arrested him.

## Plaqueholders drive-by strikes home, vehicle

Plaqueholders Parish Sheriff's Office is investigating an early morning drive-by shooting in the 400 block of Walker Road in Belle Meade. At least two bullets were fired into a home, and a vehicle was struck, police said. The incident was reported at 4:25 p.m. at the Kenner levelers, 4103 Williams Blvd. Police said a customer was looking at a four-to-six percent behind the counter when he jumped onto the counter, snatched the product and ran out. Police said they found McGee running in the 3700 block of 42nd Street, chased him and arrested him.

— From staff reports

## Algiers street improvements officially start

## Project designed for greater safety

From staff reports

Improvements to Gen. de Gaulle Drive and Newton Street are just the beginning of a plan to rehabilitate Algiers streets, officials said Thursday. Elected officials, business leaders and residents met the ribbon on the \$3 million Paths to Progress project designed to make streets safer and add sidewalks, ramps and landscaping. About \$15 million has been spent on Algiers streets in the past two to three years. Another \$50 million is being spent on Gen. de Gaulle to address chronic flooding on the community's main east-west route, said state Sen. David Lefebvre, D-Algiers.

More construction is coming. Work will begin on MacArthur Boulevard and South Street in the next few months, Lefebvre said, and efforts are underway to find money to fix Old Bohemian Highway. Repairs already planned for St. Bernard, Berkley and Huxford, said Mark Demigan, New Orleans public works director.

"This is the beginning, far from the end," Lefebvre said. "When you're able to not have to bring your car in and get it aligned every week, it makes a difference. The streets are something that government can

do." State Rep. Jeff Arnold, D-Algiers, said the investment in infrastructure is paying off. He pointed to the newly expanded Algiers Plaza on Gen. de Gaulle and two new buildings under construction on a large vacant tract on Gen. de Gaulle near Life Center Drive.

"It's not a coincidence that you're seeing economic development starting to bloom," Arnold said. "The improvement, coming on Gen. de Gaulle, is a sign of things to come." The Paths to Progress program is a \$50 million initiative to rehabilitate 60 street segments in New Orleans and Jefferson Parish. It is sponsored by the state Department of Transportation and Development, Federal Highway Administration, Regional Planning Commission and New Orleans.

He thanked state Transportation Secretary Sherri Lott, Arnold and Regional Planning Commission Executive Director Walter Brooks for helping secure funding. "When you're dealing with limited resources and how to make things happen, it's not easy to say you've done something," Lefebvre said. "Secretary Lott has figured out how to do it. She has a can-do attitude." In the past five years, almost \$1.2 billion has been spent on infrastructure in Jefferson and Orleans, Lott said. "The Paths to Progress is a testament of our continued commitment to this area," she said.

## Gretna considers garage sale limits

## Officials want them on weekends only

By Andrea Shaw

Complaints about garage sales lasting several days in residential neighborhoods prompted Gretna officials to consider restricting the sales to Saturdays and Sundays. A measure on the City Council agenda next week would limit yard sales, rummage sales and estate sales to those days from 8 a.m. until 5 p.m.

Councilman Wayne Rau said some residents called road closures to complain about neighbors who hold garage sales five or six days a week, which disrupt their quality of life. "We're

trying to set some limits. We're trying to lighten and clean up the sidewalks," he said.

Residents must still apply and pay a \$25 fee for a permit, and only two permits are issued within a 12-month period, "per piece of residential real property." They must be displayed prominently during set-up and the event.

The proposed amendment also prohibited sales from being purchased for the purpose of resale and home garage sale signs from public property, including night poles.

Violated rules could carry up to 15 days in jail and a \$500 fine. The council meets Dec. 10 at 5:30 p.m. at City Hall, 1001 N. Long Avenue and Second Street.

Andrea Shaw can be reached at andrea@nola.com or 504-825-3780.

## Plans for pharmacy on Magazine Street met with mixed reactions

## Sale of alcohol opposed by some

By Richard A. Webster

Plans to turn a vacant store space that once housed a Blockbuster Video on Magazine Street into a CVS pharmacy have been met with opposition from nearby residents. The Optima Movement, a neighborhood group, is opposing the plan.

"The corner building at Louisiana Avenue and Magazine Street has sat largely vacant since the recent wave of Blockbuster Video closings. Though the Subway sandwich shop and Green Tea Chinese Restaurant remain open on the Louisiana Avenue side of the building, the building is a eyesore," the group said. "We hope to buy the building,

renovate it completely, and use the entire space for a pharmacy," said Landrus, attorney Michael Sherman in a meeting with neighbors Tuesday evening.

Residents say they oppose the opening of another drug store in the neighborhood because there is already a Walgreens located a few blocks away. But their main objection is to CVS plan to sell alcohol.

"Sherman said the store would not sell any alcohol as single for individual consumption, but neighbors said that the Walgreens down the street has thrived despite an agreement not to sell alcohol," the story reports. "If the CVS receives permission to sell alcohol, they said, the Walgreens will likely feel compelled to follow suit." The City Planning Commission and the City Council must approve the story. "Now, CVS hopes to buy the building,

-Page Intentionally Left Blank-

# Programmatic Environmental Impact Statement

## What are the Project Alternatives?

### Mixed Technologies Alternative:

FirstNet intends to construct a long-term evolution (LTE) nationwide public safety broadband network (NPSBN) using a combination of the following methods:

- Collocation of the network equipment on existing towers, poles and structures, some of which would require structural hardening or reinforcement to improve disaster resistance and resiliency;
- Construction of new communication towers, poles and associated structures to include generators, equipment sheds, fencing, and concrete pads;
- Collocation on existing fiber facilities, including lighting dark fiber and installation of new fiber on existing poles and in existing conduit;
- Installation of new conduit and fiber using trenching (including vibratory plowing) or directional boring (including horizontal directional drilling);
- Deployment of satellite phones and other portable satellite technology;
- Installation of microwave facilities for cell-site backhaul communication; and
- Utilization of deployable technologies to reach rural and remote areas. Deployable technologies encompass a range of items, generally characterized as the following:
  - Cell on Wheels (COW): a cellular base station on a trailer with an expandable antenna mast and usually a microwave or satellite link back to the main controller;
  - Cell on Light Truck (COLT): a cellular base station on a light truck platform with an expandable antenna mast and usually a microwave or satellite link back to the main controller;
  - System on Wheels (SOW): a full base station and controller on a trailer/truck/big rig/etc. A SOW is a fully self-contained cellular system that can provide an island system with no need for satellite/microwave link back; applicability of this type of deployable technology may be limited if there is no internet connectivity; and,
  - Deployable Aerial Communications Architecture: Aerial vehicles, including, but not limited to, drones, weather balloons, and blimps, which would be deployed at high altitudes and are capable of providing wide-area coverage, although with relatively low capacity/throughput.

### Deployable Technologies Only Alternative:

Procure, deploy, and maintain a nationwide fleet of mobile communications systems to provide temporary coverage in areas not covered by existing, usable infrastructure, as there would be no collocation of equipment or new construction. Generally, these units would be deployed at times of an incident to the affected area. These mobile communication units would be temporarily installed and may use existing satellite, microwave, or radio systems for backhaul.

### No Action Alternative:

Under the No Action Alternative, the Nationwide Public Safety Broadband Network (NPSBN) would not be constructed; there would be no nationwide, coordinated system dedicated to public safety interoperable communications. The existing multiplicity of communications networks would remain in place, as would the current, known limitations and problems of existing communication networks during times of emergency or disaster. This alternative would require an act of Congress to revise the Act, which currently requires the NPSBN.

The FirstNet Programmatic Environmental Impact Statement project area would cover the geography of 50 states, 5 territories, the District of Columbia, and 566 tribal nations. Over the past 30 years, wireless operators have invested tens of billions of dollars in terrestrial networks covering over 60% of the U.S. land mass. The Nationwide Public Safety Broadband Network (NPSBN) is intended to provide nationwide service, including substantial rural milestones as part of each phase of the construction and deployment of the network.

The programmatic approach allows FirstNet to identify and define three categories of actions: those types of actions that would not have a significant impact on the environment; those actions that would not have a significant impact if certain mitigation measures or best management practices are implemented; and those actions that will require site-specific analysis to determine the nature and extent of impacts.

# Programmatic Environmental Impact Statement

## NEPA Process

The National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 et seq.) provides a framework to evaluate the impact of major federal actions on the environment and allows the public the opportunity to provide input on implementation alternatives. NEPA requires federal agencies to integrate environmental values into their decision-making processes by considering the environmental impacts of their proposed actions and reasonable alternatives to those actions. NEPA also established the Council on Environmental Quality (CEQ). As part of the Executive Office of the President, CEQ coordinates federal environmental efforts and is responsible for advising the President on environmental policy matters. CEQ has also promulgated regulations implementing NEPA which are binding for all federal agencies. These regulations address the procedural provisions of NEPA and the administration of the NEPA process, including preparation of Environmental Impact Statements (EIS).

NEPA is applicable to all "major" federal actions affecting the quality of the human environment. A major federal action is an action with effects that may be major and which are potentially subject to federal control and responsibility. These actions may include new and continuing activities, including projects and programs entirely or partly financed, assisted, conducted, regulated,

or approved by federal agencies; new or revised agency rules, regulations, plans, policies, or procedures; and legislative proposals. FirstNet has determined the construction, operation, and maintenance of the Nationwide Public Safety Broadband Network (NPSBN) qualifies as a major federal activity under these criteria and triggers a NEPA review.

Because of this, FirstNet is required to comply with NEPA, which requires that the government examine the environmental, social, historic, and cultural impacts of its proposed actions before it irretrievably commits resources to undertake them. Furthermore, FirstNet must comply with its own NEPA implementing procedures, which were finalized and published in the Federal Register on April 29, 2014. On November 12, 2014, FirstNet published a Notice of Intent (NOI) to prepare five coordinated Programmatic Environmental Impact Statements (PEIS) in the Federal Register. The PEISs will analyze the direct, indirect, and cumulative impacts of the alternative approaches to the construction, operation, and maintenance of the NPSBN on natural, cultural, and social resources.

The NEPA process is depicted in the diagram below. The light blue coloring indicates those opportunities for the public to comment on the project.

The PEIS process started with publication of the Notice of Intent in the Federal Register on November 12, 2014. The scoping/public comment period for this PEIS will end on December 29, 2014.

Currently, the PEIS is at the scoping phase. During the scoping phase, a wide range of partners including the public, interest groups, and agencies at all levels of government are encouraged to provide input about the project. The PEIS will incorporate and build upon the prior planning efforts, environmental studies, and public input.

All of the collected information will form the basis for a range of alternatives to implement the project and eventually the selection of a preferred alternative.

The preferred alternative will be identified in the Draft PEIS when it is made available to the public for review and comment. A 45-day public comment period with public hearings similar to the scoping meetings will be held. The Final PEIS will incorporate comments received on the Draft PEIS. After publication of the Final PEIS, FirstNet will make the decision regarding the selection of an alternative within a Record of Decision.

# Programmatic Environmental Impact Statement

## Public Involvement

The National Environmental Policy Act (NEPA) regulations require that a lead agency preparing an Environmental Impact Statement (EIS) is to involve the public, along with government agencies, American Indian tribes, private-sector organizations, and other interested parties in scoping (40 CFR 1501.7).

The public scoping process for the FirstNet Programmatic EIS (PEIS) began with publication of the Notice of Intent in the Federal Register on November 12, 2014. Scoping is the first phase of the NEPA analysis process and gives interested parties the chance to comment on the proposed action and to offer suggestions about the issues to be considered in the EIS analyses. Interested government agencies, American Indian tribes, private-sector organizations, and the general public are encouraged to participate in this scoping process. The scoping period will last for 45 days, ending on December 29, 2014. Written comments can be submitted either electronically or by paper copy. Information and public comments received during the Scoping Period will be reviewed for consideration in the development of each regional Draft PEIS.

To receive updates and announcements regarding the project and public involvement opportunities on this project, email [PEISComments@firstnet.gov](mailto:PEISComments@firstnet.gov).

**Public Scoping Comment Period: November 12 to December 29, 2014**

## Scoping Meetings

FirstNet is holding scoping meetings in the following locations to obtain comments from the public:

- Tuesday, November 25: Washington DC, 4 – 8 p.m., EST
- Tuesday, December 2: Honolulu, HI, 4 – 8 p.m., HST
- Thursday, December 4: San Francisco, CA, 4 – 8 p.m., PST
- Thursday, December 4: Tucson, AZ, 4 – 8 p.m., MST
- Tuesday, December 9: Kansas City, MO, 4 – 8 p.m., CST
- Thursday, December 11: New Orleans, LA, 5 – 9 p.m., CST
- Monday, December 15: New York, NY, 4 – 8 p.m., EST

Each scoping meeting will provide an opportunity for the public to speak with subject matter experts and FirstNet staff. The scoping meetings are an open format, allowing the public to drop in at their convenience throughout the evening. Comments can be provided to FirstNet staff with a note taker present to transcribe their comments. In addition, attendees can provide their comments in writing at the meeting.

## Submitting Comments

The public is invited to submit written comments for consideration during scoping. Written comments may be submitted electronically via email to [PEISComments@firstnet.gov](mailto:PEISComments@firstnet.gov), in person using the comment forms provided at this scoping meeting, or by mail to:

Amanda Pereira, NEPA Coordinator  
FirstNet  
12201 Sunrise Valley Drive, M/S 243  
Reston, VA 20192

*Comments received will be made a part of the public record and may be posted to the FirstNet website without change. Comments should be machine readable and should not be copy-protected. All personally identifiable information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.*

## How Are Scoping Comments Used?

Scoping for the Draft PEIS will provide several key elements to assist in the preparation of the document:

1. Gathering information and ideas from the public and key stakeholder groups, such as the public safety community, about the analytical issues related to the Nationwide Public Safety Broadband Network;
2. Making determinations about which issues should be analyzed; and
3. Identifying alternatives to the proposed action that should be considered for analysis.

The scoping process is ongoing and critical to informing federal agency actions, in that it begins before the PEIS analyses are initiated and continues throughout document development of the PEIS.

# Programmatic Environmental Impact Statement

## What is the Proposed Action?

The purpose of the proposed action is to develop a nationwide, interoperable, public safety broadband network (NPSBN). The goal of FirstNet is to provide dedicated services that are comparable to or better than those services public safety has access to today through commercial broadband wireless carriers. These applications and services are intended to enhance the ability of the public safety community to perform more reliably, effectively and safely. FirstNet's goal is that the NPSBN would also provide a backbone to allow for improved communications by carrying high-speed data, location information, images, and, eventually, streaming video. This capability is intended to increase situational awareness during an emergency and improve the ability of the public safety community to effectively engage in those critical activities.

## Description of the Proposed Action

The Proposed Action would encompass the design, construction, and operation of the NPSBN by FirstNet or a partner organization(s). By statute, the network must have several characteristics, including security, resiliency, backwards compatibility with existing commercial networks, integration with public safety access point (PSAPs) or their equivalents, substantial rural coverage, it must be built to open, non-proprietary, commercially available standards, and it must use existing infrastructure to the maximum extent economically desirable.

FirstNet intends to construct a core network, comprised of all standard Evolved Packet Core elements under the 3rd Generation Partnership Project (3GPP) standards (including the Serving and Packet Data Network Gateways, Mobility Management Entity, and the Policy and Charging Rules Function), device services, location services, billing functions, and all other network elements and functions other than the Radio Access Network (RAN). FirstNet expects to construct RAN networks that would consist of all cell site equipment, antennas, and backhaul equipment and services required to enable wireless communications with devices using the public safety broadband spectrum. In addition, FirstNet must continue to maintain and improve the NPSBN to account for new and evolving technologies.

## The Promise of FirstNet

### WHAT IS THE FIRST RESPONDER NETWORK AUTHORITY (FIRSTNET)?

FirstNet is an independent authority within the U.S. Department of Commerce's National Telecommunications and Information Administration. FirstNet is governed by a 15-member Board consisting of the Attorney General of the United States, the Secretary of Homeland Security, the Director of the Office of Management and Budget, and 12 members appointed by the Secretary of Commerce. The FirstNet Board is composed of representatives from public safety; local, state and federal government; and the wireless industry.

Signed into law on February 22, 2012, the [Middle Class Tax Relief and Job Creation Act](#) created FirstNet. The law gives FirstNet the duty to build, operate and maintain the first high-speed, nationwide wireless broadband network dedicated to public safety entities. FirstNet will provide a single interoperable platform for public safety communications.

### WHAT WILL BE POSSIBLE WITH THE FIRSTNET NETWORK?

The FirstNet network will improve citizen and responder safety and increase the efficiency and effectiveness of emergency response through cutting edge broadband communications. Imagine a day when a single communications network can be used to dispatch EMS personnel, a medical helicopter, police officers, and fire personnel from different jurisdictions all at the same time, utilizing voice, video, and data at broadband speeds.

Public safety personnel using the FirstNet network will be able to share applications, access databases, and provide better informed responses to incidents through integrated communications.

FirstNet's goal is to provide public safety-grade reliability and nationwide coverage so all public safety personnel can count on the network when they are on the job. FirstNet is also aiming to provide coverage solutions that let public safety "take the network along" to the destination in certain geographies. FirstNet will create a nationwide standard of service while affording localized customization and control.

When the FirstNet network launches, it will provide mission-critical, high-speed data services to supplement the voice capabilities of today's Land Mobile Radio (LMR) networks. Initially, the FirstNet network will be used for sending data, video, images and text. The FirstNet network will also carry location

## **WHY WAS FIRSTNET CREATED?**

The public safety community fought hard to fulfill the 9/11 Commission's last standing recommendation and lobbied Congress to pass legislation establishing a dedicated, reliable network for advanced data communications nationwide. During emergencies, public safety personnel need priority access and preemption, which are not available on commercial networks.

## **HOW WILL THE FIRSTNET NETWORK BENEFIT PUBLIC SAFETY?**

Using the FirstNet network will improve situational awareness, decision-making and responder and citizen health and safety. Just as smartphones have changed personal lives, FirstNet devices and applications will ultimately change the way public safety operates. FirstNet devices will work anywhere on the network and will save time when seconds matter. A market of millions of public safety users will bring savings opportunities to state and local budgets. FirstNet will bring the benefits of a single, nationwide, interoperable network that is built to open standards to public safety agencies across the country. With millions of users on a single network, FirstNet can take advantage of increased vendor competition and economies of scale to drive down the final cost to the public safety user.

## **WHAT WILL USERS PAY FOR FIRSTNET'S SERVICES?**

FirstNet intends to offer services at a compelling and competitive cost to attract millions of public safety users and make FirstNet self-sustaining. The use of FirstNet services and applications will be voluntary. The costs for FirstNet services and devices have not yet been set.

## **HOW WILL STATES AND AGENCIES PARTICIPATE IN THE BUILDOUT OF FIRSTNET?**

The law that established FirstNet requires it to consult with regional, state, tribal and local jurisdictions to ensure that the FirstNet network is designed to meet the needs of public safety across the country. State consultation will be a collaborative process, involving key stakeholders and leadership from each state and territory, and will be iterative to allow for enhancements and improvements from the state and territory. FirstNet will work through the designated single officer or governmental body during consultation to gather requirements from key stakeholders for developing its deployment plan. Additional information on state consultation is available at <http://firstnet.gov/consultation>.

# PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT

## Public Involvement

The public scoping process began with publication of the Notice of Intent in the Federal Register on November 12, 2014. Scoping is the first phase of the NEPA analysis process and gives interested parties the chance to comment on the proposed action and to offer suggestions about the issues to be considered in the EIS analyses. Interested government agencies, American Indian tribes, private-sector organizations, and the general public are encouraged to participate in this scoping process.

The scoping period will last for 45 days, ending on December 29, 2014. Written comments can be submitted either electronically or by paper copy. Information and public comments received during the scoping period will be reviewed for consideration in the development of each regional Draft PEIS.

## Submitting Comments

The public is invited to submit written comments for consideration during scoping. Written comments may be submitted electronically via email to **PEIScomments@firstnet.gov** or by mail to:

Amanda Pereira, NEPA Coordinator  
FirstNet  
12201 Sunrise Valley Drive, M/S 243  
Reston, VA 20192

*Comments received will be made a part of the public record and may be posted to the FirstNet website without change. Comments should be machine readable and should not be copy-protected. All personally identifiable information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.*

# PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT

## What is NEPA?

The National Environmental Policy Act of 1969 (NEPA) provides a framework to evaluate the impact of major Federal actions on the environment and through the PEIS process, allows the public the opportunity to provide input on implementation alternatives.

The NEPA process is depicted in the diagram below. The light blue coloring indicates those opportunities for the public to comment on the project.

The PEIS process began with publication of the Notice of Intent in the Federal Register on November 12, 2014. The scoping/public comment period for this PEIS will end on December 29, 2014.

# PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT

## Description of the Project Area

The FirstNet Programmatic Environmental Impact Statement project area would cover the geography of 50 states, 5 territories, the District of Columbia, and 566 Federally recognized tribes. Over the past 30 years, wireless operators have invested tens of billions of dollars in terrestrial networks covering over 60% of the U.S. land mass. The NPSBN is intended to provide nationwide service, and it is intended to include milestones that address wilderness and rural coverage gaps.

The project area is divided into five regions:

-  **East** – comprised of FEMA regions 1, 2, and 3 (with the exception of PR and USVI)
-  **Central** – comprised of FEMA regions 5, 7, and 8
-  **South** – comprised of FEMA regions 4 and 6
-  **West** – comprised of FEMA regions 9 and 10 (except for AK and the Pacific Islands)
-  **Non-Contiguous** – comprised of AK, HI, PR, USVI, CNMI, AS, and Guam

# PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT

## **What are the Project Alternatives?**

### **Mixed Technologies Alternative:**

Potential elements to be considered for the construction of a long-term evolution (LTE) nationwide public safety broadband network (NPSBN):

- Collocation of the network equipment on existing towers, poles and structures;
- Construction of new communication towers, poles and associated structures;
- Collocation on existing fiber facilities;
- Installation of new conduit and fiber using trenching or directional boring;
- Deployment of satellite phones and other portable satellite technology;
- Installation of microwave facilities for cell-site backhaul communication; and
- Utilization of deployable technologies to reach rural and remote areas, such as;
  - Cell on Wheels (COW)
  - Cell on Light Truck (COLT)
  - System on Wheels (SOW)
  - Deployable Aerial Communications Architecture: Aerial vehicles, including, but not limited to, drones, weather balloons, and blimps, which would be deployed at high altitudes and are capable of providing wide-area coverage, although with relatively low capacity/throughput.

### **Deployable Technologies Alternative:**

Procure, deploy, and maintain a nationwide fleet of mobile communications systems to provide temporary coverage in areas not covered by existing, usable infrastructure, for deployment at times of an incident to the affected area. These mobile communication units would be temporarily installed and may use existing satellite, microwave, or radio systems for backhaul.

### **No Action Alternative:**

Under the No Action, the NPSBN would not be constructed; there would be no nationwide, coordinated system dedicated to public safety interoperable communications. This alternative would require an act of Congress to revise the Act, which currently requires the NPSBN.

# PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT

## What is the Proposed Action?

The proposed action is to develop a nationwide, interoperable, public safety broadband network (NPSBN) with the goal of being comparable to or better than those services public safety has access to today through commercial broadband wireless carriers. These applications and services are intended to enhance the ability of the public safety community to perform more reliably, effectively and safely.

FirstNet's goal is that the NPSBN would also provide a backbone to allow for improved communications by carrying high-speed data, location information, images, and, eventually, streaming video. This capability is intended to increase situational awareness during an emergency and improve the ability of the public safety community to effectively engage in those critical activities.

## Description of the Proposed Action

The Proposed Action would encompass the design, construction, and operation of the nationwide NPSBN by FirstNet or a partner organization(s). By statute, the network must have several characteristics, including security, resiliency, backwards compatibility with existing commercial networks, integration with public safety answering points (PSAPs) or their equivalents, substantial rural coverage, it must be built to open, non-proprietary, commercially available standards, and it must use existing infrastructure to the maximum extent economically desirable.

FirstNet intends to construct a core network, comprised of all standard Evolved Packet Core elements under the 3rd Generation Partnership Project (3GPP) standards, device and location services, billing functions, and all other network elements other than the Radio Access Network (RAN). FirstNet expects to construct RAN networks that would consist of all cell site equipment, antennas, and backhaul equipment required to enable wireless communications with devices using the public safety broadband spectrum.

Finally, the Act states that FirstNet must continue to maintain and improve the NPSBN to account for new and evolving technologies.

| 11/18/2014 | Mail   | Ellie L. Irons | Commonwealth of VA - Department of Environmental Quality | RFI                                             | <p>Dear Ms. Pereira:</p> <p>This letter responds to the above Notice of Intent, which appeared in the November 12 Federal Register (Volume 79, Number 218) at pages 67156-67157 (hereinafter cited as "the Notice").</p> <p>The Department of Environmental Quality ("DEQ") is responsible for coordinating Virginia's review of federal environmental documents prepared pursuant to the National Environmental Policy Act ("NEPA") and responding to appropriate federal officials on behalf of the Commonwealth. DEQ also coordinates Virginia's review of federal consistency determinations and certifications prepared pursuant to the Coastal Zone Management Act ("CZMA") and the Virginia Coastal Zone Management Program ("VCP").</p> <p>DESCRIPTION OF PROPOSED ACTION</p> <p>According to the Notice, the First Responder Network Authority ("FirstNet") is a unit of the Department of Congress, created by the Middle Class Tax Relief and Job Creation Act of 2012 (Public Law 112-96, codified at Title 47, United States Code sections 1401 et seq.) and authorized to "take all actions necessary to ensure the building, deployment, and operation of an interoperable, nationwide public safety broadband network." The network is intended to "allow police officers, fire fighters, emergency medical service professionals, and other public safety entities to effectively communicate with each other across agencies and jurisdictions." (Notice, page 67157, center column).</p> <p>According to the Notice, FirstNet will prepare five regional Programmatic Environmental Impact Statements (PEISs) and conduct scoping meetings, notice of which will be given in the FirstNet web site (<a href="http://www.firstnet.gov">http://www.firstnet.gov</a>). Following completion of the PEISs, proponents of proposed projects will submit site-specific environmental documentation to determine whether a proposed project warrants a Categorical Exclusion, an Environmental Assessment, or an Environmental Impact Statement. The concept of tiering (see National Environmental Policy Act regulations at Title 40, Code of Federal Regulations, part 1508, section 1508.28) will be employed as FirstNet moves from the five PEISs to regional, basin-wide, or site-specific project considerations (Notice, pages 67156-67157).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                                                                                                                                                                  |
| 11/18/2014 | Mail   | Ellie L. Irons | Commonwealth of VA - Department of Environmental Quality | Scoping / Request for copies of DPEIS and FPEIS | <p>ENVIRONMENTAL REVIEW UNDER THE NATIONAL ENVIRONMENTAL POLICY ACT: PROJECT SCOPING AND AGENCY INVOLVEMENT</p> <p>While this Office does not participate in scoping efforts beyond the advice given herein, other agencies are free to provide scoping comments concerning the preparation of the NEPA document. Accordingly, we are sharing this response to the Notice, and copies of the Notice itself, with selected state and local Virginia agencies whose responsibilities may affect, or be affected by, the plans and/or projects considered in the PEIS covering the eastern states. These agencies are likely to include the following (note: starred (*) agencies administer one or more of the enforceable policies of the Virginia Coastal Zone Management Plan; see "Federal Consistency ..." heading, next):</p> <p>Department of Environmental Quality:</p> <ul style="list-style-type: none"> <li>-Office of Environmental Impact Review</li> <li>-Northern Regional Office*</li> <li>-Piedmont Regional Office*</li> <li>-Tidewater Regional Office</li> <li>-Valley Regional Office</li> <li>-Blue Ridge Regional Office</li> <li>-Southwest Regional Office</li> </ul> <p>"Division of Air Program Coordination"</p> <p>"Division of Land Protection and Revitalization (formerly Waste Division)"</p> <p>Office of Stormwater Management"</p> <p>Department of Conservation and Recreation Department of Health (Division of Water Programs)"</p> <p>Department of Game and Inland Fisheries"</p> <p>Virginia Marine Resources Commission" Department of Historic Resources Department of Forestry</p> <p>Department of Transportation</p> <p>Department of Mines, Minerals, and Energy</p> <p>Virginia State Police</p> <p>Department of Emergency Management.</p> <p>In keeping with our regular practice, we will solicit comments from regional planning district commissions and localities when EISs, EAs, or federal consistency documents (again, see next heading) are prepared for programs or projects, based on their nature and geographic impacts.</p> <p>In order to ensure an effective coordinated review of the PEIS, we will require at least 19 copies of it when it is published. This submission may include at least 3 printed copies and 16 CDs, or at least 3 printed copies and an electronic copy available for download at a web site or ftp site. If the PEIS addresses geographic reach or impacts of the program or projects, then it should include one or more U.S. Geological Survey topographic maps as part of its information. We recommend, as well, that project details unfamiliar to people outside FirstNet be adequately described in the PEIS.</p>                                                                                                                                                                                                                                                           | Due to the nationwide scope of our current programmatic analysis and the considerable size of the documents, it may not be possible for FirstNet to provide hard copies of the draft and final documents to all interested parties. However, the documents will be available for download on our website to all interested parties. |
| 11/18/2014 | Mail   | Ellie L. Irons | Commonwealth of VA - Department of Environmental Quality | Coastal Zone Management Act                     | <p>FEDERAL CONSISTENCY UNDER THE COASTAL ZONE MANAGEMENT ACT</p> <p>Pursuant to the Coastal Zone Management Act of 1972, as amended, and the Federal Consistency Regulations (15 CFR Part 930), federal projects with reasonably foreseeable effects on Virginia's coastal uses or resources must be conducted in a manner which is consistent, to the maximum extent practicable, with the Virginia Coastal Zone Management Program (VCP). The VCP is comprised of a network of programs administered by several agencies.</p> <p>FirstNet must submit a federal consistency determination (FCD) which analyzes the coastal effects of the project in light of the enforceable policies of the VCP (first enclosure), and provides a commitment to comply with the enforceable policies. In addition, we invite FirstNet's attention to the advisory policies of the VCP (second enclosure). Requirements for the contents of FCDs are found in the Federal Consistency Regulations (15 CFR Part 930, Sub-part D, sections 930.39) and also in DEQ's Federal Consistency Information Package (available online at <a href="http://www.deq.virginia.gov/Portals/0/DEQ/EnvironmentalImpactReview/FederalConsistencyManual.7.27.11.pdf">http://www.deq.virginia.gov/Portals/0/DEQ/EnvironmentalImpactReview/FederalConsistencyManual.7.27.11.pdf</a>. The Federal Consistency Information Package defines Virginia's coastal zone, among other things.</p> <p>The Federal Consistency Regulations allow up to 60 days for our review of an FCD (15 CFR Part 930, Sub-part C, section 930.41(b)).</p> <p>The FCD may be submitted as a part of and EIS or separately, as you prefer. We recommend that the FCD for a particular project or plan be submitted with the Final EIS rather than the Draft EIS, in order that it reflect resolution of coastal issues that may arise during the comment period for the Draft EIS.</p> <p>In the event broadband network project proponents should seek FirstNet licensing or permitting for their projects, the Federal Consistency Regulations have slightly different requirements and time frames. Three examples of these differences will suffice here:</p> <ul style="list-style-type: none"> <li>• The federal consistency document is called a "federal consistency certification" rather than a "federal consistency determination."</li> <li>• Projects or plans subject to federal licensing or permitting must be consistent with the enforceable policies of the VCP; the qualifier "to the maximum extent practicable" applies only to direct federal actions.</li> <li>• The time frame for the state's response is 180 days, with a requirement that the state provide a progress report in 90 days and an explanation of the reason for further delay in the response.</li> </ul> <p>The Federal Consistency Regulations address federal licensing and permitting in Sub- part D (sections 930.50 through 930.66).</p> | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                                                                                                                                                                  |

| 12/2/2014  | Mail                  | Mark Alling           | Commonwealth of VA - Department of Environmental Quality | Water Resources                     | <p>Dear Ms. Pereira:</p> <p>I have reviewed the Scoping for the above referenced project proposed by the National Telecommunications and Information Administration to prepare five regional Programmatic Environmental Impact Statements and conduct scoping meetings. FirstNet intends to build, deploy and operate an interoperable, nationwide public safety broadband network based on a single national network which will allow police, fire emergency medical and other professionals and entities to effectively communicate with each other across agencies and jurisdictions. PRO comments for this project are as follows:</p> <p>Water: Where building and deployment cross or impact surface and groundwater features, erosion and sediment controls should be properly implemented and maintained throughout all phases of construction. E &amp; S controls and Best Management Practices (BMPs) should be inspected/repaired before and after rain events. Please follow all standards and specifications under the Virginia DCR Erosion &amp; Sediment Controls Handbook (1992, 3rd Edition). DEQ recommends maximizing pervious surface areas and green spaces in the construction design to reduce runoff and the environmental impact associated with urban runoff.</p> <p>Please contact Allison Dunaway at (804) 527-5086 for questions dealing with permitting of construction in and near wetlands. Please contact Emilee Adamson at (804) 527-5072 for questions dealing with construction or industrial stormwater permitting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                                                  |
| 12/2/2014  | Mail                  | Mark Alling           | Commonwealth of VA - Department of Environmental Quality | Waste                               | <p>Waste: Hazardous or solid waste materials generated should be tested and removed in accordance with the Virginia Hazardous Waste Management Regulations (9 VAC 20-60) and/or the Virginia Solid Waste Management Regulations (9 VAC 20-80). Please understand that it is the generator's responsibility to determine if a solid waste meets the criteria of a hazardous waste and as a result be managed as such. In addition, asbestos waste, lead waste, or contaminated residues generated must be handled and disposed of in accordance with the VSWMR or VHWMR as applicable. DEQ recommends that pollution prevention principles be implemented to reduce the amount of wastes at the source, such as the re-use and recycling of waste materials. If you have any questions concerning hazardous/solid waste management, please contact Jason Miller at (804)527-5028.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                                                  |
| 12/2/2014  | Mail                  | Mark Alling           | Commonwealth of VA - Department of Environmental Quality | Air                                 | <p>Air: DEQ recommends following all air quality standard and specifications to reduce or avoid the emissions of VOCs, especially during periods of high ozone. Fugitive dust should be kept to a minimum, (9 VAC 5-40-5630 et seq). Permits may be required for any boilers or fuel-burning equipment. Alling<br/>Water Monitoring and Planning Manager</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                                                  |
| 12/11/2014 | Meeting (New Orleans) | Catherine Cargo       | Orleans Parish Communications District (OPCD)            | FirstNet outreach                   | Work on outreach to NENA APCO and their local chapters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | FirstNet will continue to provide information regarding the NEPA process to our stakeholders and provide opportunities for all interested parties to provide input during the release of the draft and final PEISs. |
| 12/11/2014 | Mail and Email        | Ronald P. Spark, M.D. | Public                                                   | Biological Resources                | <p>Ms. Pereira:</p> <p>For over a decade I've been one of the hundreds of Tucsonans who daily walk Tucson's Tumamoc Hill. Sited in the midst of Downtown, this volcanic outcropping and Sonoran desert respite affords both the layman and the scientist the engagement and delight in a more than 100 years of reclaimed natural setting. In particular, I'm continually amazed when observing the broadly diverse and robust desert plants and animal species.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                         |

Spark, M.D. | Public                                                   | Aesthetics / Recreational Use       | <p>As a physician, I am touched by seeing some walkers using canes, braces and, even oxygen, to ascend and absorb the meaningfulness of the Hill. The place has an innate inspiring character. I trust the National Wifi Network will ensure the Public Safety but we must not allow any footprint to lessen the intrinsic public, scientific and cultural value of Tumamoc Hill.</p> <p>Sincerely yours,<br/><br/>Ronald P. Spark, M.D.<br/>Past-President, Pima County Medical Society<br/>Clinical Associate Professor, University of Arizona College of Medicine</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Thank you for your comment.                                                                                                                                                                                         |

| 12/15/2014 | Email            | Michael Rosenzweig | University of Arizona | NOI                           | <p>Dear Ms. Pereira,</p> <p>Please accept the attached pdf file as my comment on the proposed FirstNet system in Pima County, Arizona.</p> <p>BTW I met with four FirstNet people in Tucson at the scoping meeting. They brought professionalism and interest to it. I thought they included their contact information in the material they gave me, but I could not find it when I returned home. The first name of the leader was Genevieve and I would like very much to get in touch and thank her.</p> <p>Sincerely,<br/>Mike</p> <p>Michael I. Rosenzweig<br/>Director<br/>Tumamoc: People &amp; Habitats<br/>Professor<br/>University of Arizona</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>Because of its location in the heart of Tucson, and its prominent elevation and many straight-line radio access paths to the city, this US National Historic Landmark was selected as one of the sites for a transmission tower in the Pima County system to insure interoperability among first responders. The tower is now working as legs for numerous antennae. But its construction was an historic mistake because it greatly erodes the integrity of the NHL.</p> <p>As it seems likely that FirstNet's new technology will collocate by default on the Tumamoc tower, I believe FirstNet needs to learn about the NHL so that its decisions will be fully informed and not directed to such a default position for lack of background data.</p> <p>I add that the County of Pima &amp; The University of Arizona agreed that as new technology was needed to replace the old on Tumamoc, the new would be deployed elsewhere and the old removed from Tumamoc Hill.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies to comply with all requirements.                                          |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>Ownership</p> <p>The Landmark has four major ownership divisions:</p> <ul style="list-style-type: none"> <li>• 350 acres of fee simple land; owner, U of A</li> <li>• 200 acres from the original U of A land grant</li> <li>• 300 acres open space; owner, Pima County</li> <li>• 20 acres of former landfill; owner, City of Tucson (capped with an ecologically sound, evapotranspirative layer of soil that makes it available for experiments)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Biological Resources          | <p>Ecology</p> <p>Founded as The Carnegie Desert Botanical Laboratory in 1903, it instantly became a leader in ecological research. In 1975, the US Department of the Interior designated part of it and some of its structures a US National Historical Landmark. In 1981, the State of Arizona designated the Hill an "Environmental Research Natural Area."</p> <p>Most of what the world knows about the physiology and ecology of Arizona's iconic saguaro cactus comes from research that began on Tumamoc Hill in 1903 and continues to this very day. In 1985, University and USGS investigators were finally able to establish the nature of the sporadic reproduction of saguaros — it had taken us 80 years! More recently, the Hill hosted the discovery that the isotope ratios of saguaro cactus spines allow us to measure, for the first time, the climate of the Sonoran Desert during the past two centuries. And in 2014, one of its saguaros provided a tissue sample that resulted in the first genome description of any cactus species in the world.</p> <p>Tumamoc Hill is the site of nine plant ecology study quadrats that date from 1906 and are the world's oldest permanent ecology study plots. From 2010-2012, all quadrats were resurveyed with modern optical and digital tools, given GPS coordinates and re-measured. All the data of the previous century-plus were digitized, filed with the National Park Service and made publicly available via the Ecological Society of America.</p> <p>Beginning in 1982, long transects were established to record and understand the ecology of more than 100 species of annuals (wildflowers). We now have an unbroken and growing record of 33 generations, capable of detecting subtle variations in environmental conditions such as water regime and weather.</p> | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>Conservation</p> <p>In 1987, the Interior Dept added the remainder of the 680-acre scientific reservation to the landmark in recognition of the Hill's importance to conservation. In 1906, it banished its active stone quarries and excluded domestic grazers and browsers with a 5(+) mile-long fence in order to allow the desert to return to a natural state. Thus was established the world's first restoration ecology project. It is the Hill's conservation status, one of national and international historical significance, whose integrity is severely damaged by the tower.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>Archaeology</p> <p>For nearly half a century, research on Tumamoc Hill has produced archaeological knowledge about the people who farmed in Tucson starting thousands of years ago. Archaeological remains on the Hill include massive, 2300-yr old trincheras (encircling walls and terraces), more than 150 structures, an array of almost 1000 petroglyphs, and an elaborate prehistoric trail system. The Hill was the site of three successive hilltop settlements with masonry architecture. Very recent work with the isotopes in potsherds shows that, for two millennia or more, Native Americans have been gathering together on the Hill from all around the Tucson basin. In 2010, the US Department of the Interior designated the land and its remains, The Tumamoc Hill Archaeological District of the United States of America.</p> <p>The present communications tower and its associated structures sit on the mesa top where much of the most charismatic ruins are located.</p> <p>Archaeologists must quickly rebury any new excavation to protect it. Any hope of creating an educational experience for visitors is thwarted.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>Significance to Native American Cultures</p> <p>Tumamoc Hill is a centerpiece of the history of the ancestors of Arizona's O'odham, including the Tohono O'odham Nation, the Ak Chin Indian Community, the Gila River Indian Community, and the Salt River (Pima-Maricopa) Indian Community. The Hill is sacred to all of them. The same is true of the Hopi Nation, and the Pasqua Yaqai, too.</p> <p>Both the University of Arizona and Pima County respect the sensitivity and traditions of native people regarding Tumamoc Hill. The university and the Nations agreed in writing that the footprint of western culture on the Hill would not be increased. When their permission was sought by the county to erect the current tower, they consented only because they were told it was necessary to save lives. Absent that consideration, they would surely prefer to see the tower removed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Aesthetics / Recreational Use | <p>Walking the Hill</p> <p>Each week, thousands of people wend their way along the Tumamoc Hill Road, ascending 800 feet to its mesa top. Without promotion or marketing, "Walking the Hill" has become a Tucson institution woven into the fabric of the community, uniting people from every socio-economic group within our region. The Hill hosts approximately 300,000 to 500,000 walking trips per year. For many, their Tumamoc walk has become a daily ritual.</p> <p>Recently the University of Arizona College of Medicine has begun work on a research project focused on the walkers. It studies the effects of the green desert environment in the midst of an urban heat island on the allostatic load of stress, well-being and spirituality.</p> <p>Meanwhile, despite the crowds, the Hill has no security apparatus or personnel. Instead it relies on the honor and sound judgment of walkers to stay off the mesa top itself. But the need for good security for the FirstNet system would seem to promise tension between the need for reliable interoperability and the demand for liberal public use. Put simply, if FirstNet's needs interfere with easy access to Tumamoc by walkers, the result will be a sustained gnashing of teeth.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                 |
| 12/15/2014 | Email Attachment | Michael Rosenzweig | University of Arizona | Cultural / Historic resources | <p>SUMMARY OF IMPACTS</p> <p>Use of the mesa top of Tumamoc Hill for a communication tower to support interoperability in Pima County will have the following negative impacts.</p> <ul style="list-style-type: none"> <li>• It will establish, far into the future, a communication superstructure that amounts to a serious cultural, environmental and historical mistake.</li> <li>• It will erode the integrity of a National Historic Landmark.</li> <li>• It will prevent important archaeological resources from being made available to educate the public.</li> <li>• Either it will risk a clash between public use of the Hill for recreation, or else it will occupy an area without security.</li> <li>• It will frustrate the desire of six Native American nations to reduce the presence of unwelcome technical apparatus on a Hill invested with deep religious significance.</li> </ul> <p>Michael Rosenzweig 15 December 2014.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |

| 12/15/2014 | Email  | Paul Dayton                | University of California San Diego | Cultural / Historic resources | Dear Friends,<br>this note relates to the importance of including Tumamoc Hill, in Tucson, Arizona, in FirstNet. I write to support the inclusion of this facility. As you know it has several historic buildings but its most important ongoing legacy is the science.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements.                                                                                                                                      |
| 12/15/2014 | Email  | Paul Dayton                | University of California San Diego | Biological Resources          | It very much is the home of the science of desert ecology starting over 100 years ago with Carnegie support. Over the century some of the best desert ecologists in the world spent their careers there developing a unique understanding of the evolution of a desert ecosystem over the last 100 thousand years. In recent time they established unique baseline data on desert plants that span most of the century. They organization is unique and the facility priceless. I hope you can help protect it with FirstNet.<br>Sincerely<br>Paul Dayton                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/16/2014 | Email  | Rich Watson                | Public                             | Cultural / Historic resources | I recently heard about the future involvement of First Net on Tumamoc Hill and am encouraged that the Federal Government is concerned about secure communications. However, on a more personal level, I am concerned about maintaining the integrity of this unique and irreplaceable historical and scientific resource. Unique, in part, because it has been guarded, researched and protected by the University of Arizona and many others for over a century. In ancient times, this was home to native people long before Europeans imagined our existence and a strong remnant of those people is still intact on the property. In addition, severe encroachment by recreational users (welcomed with sensitivity), the City of Tucson and high traffic on the perimeter causes substantial risk to this delicate property. Prior to construction of the new towers on Tumamoc, I was personally involved in discussions relating to use, impact and future maintenance. When bonds are passed, funding is available and agreement reached between multiple agencies and jurisdictions it is easy to make well intended promises. Such promises were made prior to the tower development with good intentions. History dictates that memories become short and promises are forgotten over time. In this particular case, it is my sincere hope that you take seriously your new responsibility as a joint caretaker of the history, management and protection of Tumamoc. Once damaged or destroyed, it can never be restored. Consequently, it is imperative that all who are caretakers never lose vigilance as we move into the future. Please respect the ancient people, the century of scientific study and Dr.Michael Rosenzweig, who is a highly qualified and deeply invested steward of this property.<br>Rich Watson | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements.                                                                                                                                      |
| 12/16/2014 | Email  | Russell P. Long, CRB, CLHS | Long Realty Company                | Cultural / Historic resources | To Whom It May Concern,<br><br>Tumamoc Hill has been a fixture in our family since the very early 1900's when our great grandfather, Burton Bovee, began working there. Long before we every visited there and as children our mother told us tales of Burton working there, riding his horse and mule all over the Tucson basin collecting samples and specimens. As adults we became aware of the cultural and historical significance of the site as a result of the approximately 3,000 year old Hohokam Indian village atop the hill as well the historic volcanic stone buildings and their current uses. Certainly Tumamoc Hill is a local and national treasure worthy of preservation. Please feel free to contact me if you would like to discuss this or have questions.<br>Thank you.<br><br>Russell P. Long, CRB, CLHS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements.                                                                                                                                      |
| 12/19/2014 | Email  | R. Brooks Jeffrey          | University of Arizona              | Cultural / Historic resources | Ms. Pereira:<br>I'm writing at the request of Dr. Michael Rosenzweig to express my advocacy on behalf of Tumamoc Hill's preservation as a rich cultural landscape. Instead of a long essay defining cultural landscapes (if you don't already know) and recognizing Tumamoc Hill's significance as a multi-layered tell of natural and cultural features, I've attached a presentation I've given many times as a vehicle to educate the various constituencies for whom Tumamoc Hill holds value. I hope this assists to inform any future decisions that may impact Tumamoc Hill. Feel free to contact me directly with any specific questions.<br>Sincerely, Brooks<br>R. Brooks Jeffrey                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements.                                                                                                                                      |
| 12/20/2014 | Mail   | Michael Kaiserman          | Public                             | Cultural / Historic resources | Dear Ms. Pereira,<br>I am writing to you to encourage your organization to join forces with many other organizations that are already supporting members for the preservation of the archaeology, cultural history and ecology of Tumamoc Hill. It is my perception that the FirstNet activity would provide a beneficial service to significantly broaden the exposure Tumamoc Hill would have nationally. As I have travelled to Egypt, Greece, Turkey, Israel , Great Britain, Norway, and Mexico were I have visited many of the historical and ancient wonders, not to mention many sites here in the U.S., I believe Tumamoc Hill ranks up there with all these sites in the same historical and ancient context. I trust your organization will come to the same conclusion and move forward with plans to include Tumamoc Hill in the FirstNet activity.<br>Thank you very much for your consideration.<br>Michael Kaiserman<br>Engineering Fellow, Raytheon Missile Systems (Retired)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Bruce Hilpert              | Public                             | Cultural / Historic resources | I urge you to protect the cultural resources on the top of Tumamoc Hill in Tucson. This historic/prehistoric site has unique constructions that give insight into the prehistory of the Southwest. Further constructions endangers these resources. I urge you to limit construction on this site to areas that have been previously disturbed and allow no further destruction of these resources.<br>Thank you,<br>Bruce Hilpert                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Charles Broder             | Public                             | Cultural / Historic resources | Allowing first responders to communicate with each other is a very important goal. I sincerely hope that this goal will not be allowed to compromise the important cultural remnants and significance of Tumamoc Hill. It is a treasure which must be preserved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Gayle Harrison Hartman     | Public                             | Cultural / Historic resources | Firstnet,<br>I don't know exactly what you are planning for Tumamoc Hill but you need to know that it is a National Historic Landmark and, as an archaeological site, is listed on the National Register of Historic Places. The hill was used by prehistoric people at least as long ago as 500 B.C. The summit is surrounded by low basalt "walls" (linear rock piles extending for many yards), and the summit itself contains dozens of prehistoric pit structures. There are also over 700 examples of prehistoric rock art on the summit and slopes of the hill. These were recently recorded and published as "Tumamoc Rock Art Revisited: With a Focus on Temporal Affiliation and Management" by Gayle Harrison Hartmann and Peter C. Boyle. The monograph was part of Arizona State Museum Archaeological Series No. 208; the entire publication was entitled New Perspectives on the Rock Art and Prehistoric Settlement Organization of Tumamoc hill, Tucson, Arizona, edited by Gayle Harrison Hartmann and Peter C. Boyle. It is extremely important that no damage be done to the basalt "walls," (trincheras in Spanish), pit house structures, rock art and other manifestations of prehistoric or historic activity on the hill. If you have not already done so, please contact Todd Pilezel at the Arizona State Museum as soon as possible. He is the archaeologist in charge of protecting the hill. pilezel@email.arizona.edu.<br>Thank you,<br>Gayle Harrison Hartmann                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Georgia Erdmann            | Arizona Site Steward               | Cultural / Historic resources | Thank you for your consideration when you make decisions regarding placing a tower on Historic Tumamoc Hill. It is a great relief to know that you will use the pads that are already in existence and thus save some endangerment of this ancient site. It is such a great opportunity to work together to honor the ancient archaeology of the area. Thank you again.<br>Respectfully,<br>Georgia Erdmann                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/22/2014 | Email  | Jane Levin                 | Public                             | Cultural / Historic resources | I am a volunteer archeological site steward in Pima County. I am writing to encourage you to restrict any construction on the antenna pads on Tumamoc Hill. The trincheras there are ancient and precious and need to be protected.<br>Thank you for your consideration.<br>Sincerely,<br>Jane Levin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

| 12/22/2014 | Email  | Jaye S. Smith                  | Public                                        | Cultural / Historic resources | <p>Dear Ms. Pereira:<br/>As a Pima County resident and an avid archaeological enthusiast, I am extremely concerned about the proposed impact to the most important site, both historically and archaeologically, in Pima County - Tumamoc Hill. This site is extremely important for ongoing research about Hohokam Cultures, as well as immense local historical value to many of Pima County's first pioneer families, the University of Arizona, the UA School of Anthropology and the Arizona State Museum.</p> <p>Please help protect Tumamoc Hill by limiting the proposed construction to the existing antenna pads. I fully realize the importance of providing advanced communications for our first responders, but it is also important to protect the ancient trincheras sites and petroglyphs such as those found on Tumamoc Hill that we can never replace or restore once impacted. So many important archaeological sites in Pima County have been lost in recent years; we just can not afford to lose a treasure as important as Tumamoc Hill. As a proud member the Arizona State Museum, the Arizona Archaeological and Historical Society and Archaeology Southwest, I am committed to offer whatever help or assistance is needed to develop a plan that will provide the necessary communications structure and preserve this irreplaceable Hohokam site.</p> <p>Thank you for your attention;<br/>Sincerely,<br/>Jaye S. Smith</p> | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/22/2014 | Email  | Judith Reisman                 | Site Steward                                  | Cultural / Historic resources | <p>As an archeological site steward, I help protect a very old Hohokam site from theft and vandalism. I am in complete support of creating a first responders wifi network, but respectfully ask that any new hardware installations on Tumamoc Hill be confined to existing hardware sites so that the rest of this precious archeological site remains. It is wonderful to think of using the internet to help our first responders in disasters and emergencies. It is also wonderful that you all are so ready to be partners in preserving the rest of the aspects of this site.</p> <p>Thank you,<br/>Judith Reisman, site steward</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Katlin Meadows & Albert Lannon | Wild Heart Ranch                              | Cultural / Historic resources | <p>Please limit FirstNet construction on Tucson's Tumamoc Hill to existing antenna sites so that new footprints are not created. Any new work away from already-disturbed areas will impact negatively on ancient archeological sites, sites that contain habitation and farming areas, rock art with an amazing number of solstice and equinox markers, and artifacts that continue to help archaeologists understand the ancient history of this important area.</p> <p>Several years ago we helped document some of those solstice markers. To stand on the top of Tumamoc Hill as the sun rose in the east and the full moon set in the west on the Winter Solstice and see the sudden light -- "sun daggers"-- on petroglyphs mark the changing of the season was a magical and humbling experience. It speaks to the knowledge, skill, and ability of those ancient people as something well worth preserving.</p> <p>Thank you,<br/>Katlin Meadows &amp; Albert Lannon</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Katherine Cerino               | Arizona Archaeological and Historical Society | Cultural / Historic resources | <p>First, I am pleased with the Firstnet efforts - this seems like a very sensible idea. The purpose of this note is to bring to your attention the importance archaeologically of Tumamoc Hill in Tucson. The Hill has already been impacted by many towers some of which are no longer in use. I would like to ensure that the development you carry out on the Hill uses the existing disturbed footprint rather than adding to it. The Hill is archaeologically unique in the Tucson Basin in that it has some of the earliest habitation sites dating to 500 BC and some of the earliest pottery in the Basin. It was later used by the Hohokam people who pecked rock art over a great deal of the hill concentrating on the top where developmental impact is greatest. In addition, there are unique prehistoric walls around the hill. It was clearly an important and sacred place in the past and if you go up there today and simply look at the spectacular 380 degree view without even considering the importance of the past it is obviously a special place.</p> <p>Thank you,<br/>Katherine Cerino</p>                                                                                                                                                                                                                                                                                                                                   | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/22/2014 | Email  | Lance Trask                    | Public                                        | Cultural / Historic resources | <p>Dear Sir or Madam;<br/>I applaud the government for coming up with plans to have Wi-Fi available to first responders and an agency to oversee those plans. Communication at the beginning of an event is critical and can make the difference between life and death. It is likely that antennae(s) or repeaters will be considered at a location called Tumamoc Hill. It is ideal because it has a 360 degree view of a considerable portion of Southern Arizona. It is also on the National Register and holds valuable cultural resources. Some disturbances have already occurred on Tumamoc Hill and I urge you to consider placing any equipment in areas already impacted. Access to the top of the hill is via existing roads and these roads should be adequate for transporting and installing the equipment for the proposed Wi-Fi system. Currently the top of the hill is off limits and behind locked gates, so any installed equipment will be fairly well protected.</p> <p>I also urge you to work closely with the archaeological community within the Tucson area as they can provide expertise and work with the agency so it's needs are met and the cultural resources are preserved for the future.</p> <p>Thank you very much,<br/>Lance K. Trask</p>                                                                                                                                                                           | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/22/2014 | Email  | Linda Steljes                  | Public                                        | Cultural / Historic resources | <p>As a historically and archaeologically sensitive area, I am asking that FirstNet help protect the ancient trincheras on Tumamoc Hill by restricting construction to the existing antenna pads, so our first responders can communicate while still allowing Pima County and the University of Arizona to protect this important place of the past. I am a member of Arizona State Parks Site Stewards, and we are all volunteers who devote our time and energy to preserving, monitoring and protecting historical Hohokam and other paleo-Indian sites in Arizona. Human history in the Southwest (and everywhere) is essential to understanding our ancestors and we should all be stewards of the sites that reveal clues to human civilization and how people lived in the past. What may not look important to the untrained eye can hold great significance to our understanding.</p> <p>Thank you for your attention on this matter. We can all work together to preserve and protect our history.</p> <p>Sincerely,<br/>Linda Steljes</p>                                                                                                                                                                                                                                                                                                                                                                                                      | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/22/2014 | Email  | Peggy Wenrick                  | Arizona Site Steward                          | Cultural / Historic resources | <p>I understand how important the project proposed for installation on Tumamoc Hill in Tucson, Arizona is for promoting quick response in emergencies. However, I want to stress the need for careful planning and execution of the project. I am an Arizona Site Steward who regularly monitors the condition of the archeological district elements on Tumamoc. Even after many visits, I am still awed to realize that early peoples created structures and lived in this special space. I request that every effort be made to minimize the footprint of the upcoming work and strongly urge the structure(s) be confined to the antennae pads already existing.</p> <p>Thank you for the opportunity to comment.</p> <p>Peggy Wenrick</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/22/2014 | Email  | Peter J. Baum                  | Public                                        | Cultural / Historic resources | <p>Hello Ms Pereira,<br/>Please accept my fervent plea that any Firstnet access to, and construction on, Tumamoc Hill be done with the utmost sensitivity to the petroglyphs and ruins of Tucson's first public architecture, going back over two thousand years! I've called Tucson home for fifty 50 years and worked downtown for the last 38. I've had the privilege of spending time atop the hill with extraordinary experts Paul and Suzi Fish, as well as fascinating petroglyph experts. I've sadly watched Tumamoc being "loved too much" by looters, and "loved too little" by Pima County's and the University of Arizona's budgetary stinginess. Too much irreversible damage has been done already.</p> <p>Please encourage Firstnet to be extraordinarily sensitive to the unique culture treasures still left on Tumamoc, minimize work to existing pads and overall tread with the lightest footprint possible.</p> <p>Thank you<br/>Peter J. Baum</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/22/2014 | Email  | Robert Wenrick                 | Arizona Site Steward                          | Cultural / Historic resources | <p>I understand how important the project proposed for installation on Tumamoc Hill in Tucson, Arizona is for promoting quick response in emergencies. However, I want to stress the need for careful planning and execution of the project. I am an Arizona Site Steward who regularly monitors the condition of the archeological district elements on Tumamoc. Even after many visits, I am still awed to realize that early peoples created structures and lived in this special space. I request that every effort be made to minimize the footprint of the upcoming work and strongly urge the structure(s) be confined to the antennae pads already existing.</p> <p>Thank you for the opportunity to comment.</p> <p>Robert Wenrick</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/23/2014 | Email  | Denise Waldo           | Pima County Procurement              | Cultural / Historic resources | Please help protect the ancient trincheras on Tumamoc Hill by restricting construction to the existing antenna pads, so our first responders can communicate while still allowing Pima County and the University of Arizona to protect this important place of the past. My husband & I have been involved in a volunteer program to help protect archaeology sites for years. We are lucky in Arizona to have many wonderful & important sites, Tumamoc Hill being one of them. We respectfully ask that you consider the adverse impact your project could have on this site & do all you can to help protect it.<br>Thank you.<br>Denise Waldo, CPPB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/23/2014 | Email  | Fran Maiuri            | Public                               | Cultural / Historic resources | Dear Ms. Amanda Pereira:<br>I am a resident of Tucson, Arizona and I am writing to ask you to minimize the impact on Tumamoc Hill in Tucson, AZ during the construction of the FirstNet communication system. This is an extremely rich Archaeological site, one of the most important in the Tucson area. There is much on the mountain that could still inform us about our early ancestors and those features and artifact should not be disturbed. I understand the value of the FirstNet communication being put in place and support the project as long as the land where current antenna pads exist is used for the work. Please do not disturb any of the rest of this site, the archaeological site and any of the natural features and environment. Let's do this work so that the area where our prehistoric ancestors lived, worked, worshipped and recreated is untouched                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/23/2014 | Email  | Fran Maiuri            | Public                               | Biological Resources          | and where native plants, animals, insects and birds continue to enjoy this natural area within Tucson. What is disturbed cannot be brought back again and will no longer be available as natural habitat and for future research and better understanding of the past.<br>Thank you.<br>Sincerely,<br>Fran Maiuri                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                  |
| 12/23/2014 | Email  | John A. Armstrong      | Public                               | Cultural / Historic resources | Please help preserve areas of archaeological interest on Tumamoc Hill in Tucson, Arizona by limiting construction to existing antenna pads.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |

| 12/23/2014 | Email  | M. Nichols             | Public                               | Cultural / Historic resources | Tumamoc Hill is a critical site of an ancient inhabited area, 10,000 plus years ago, in North America. There is only one other site similar to this one, in Sonora, Mexico. It is imperative that old pads be used for the towers, protecting the areas that have not been disturbed. This site is not only a treasure for the residents of Tucson and the University of Arizona, it is a treasure on the North American Continent. Your help in protecting this site is invaluable and will become an excellent public relations tool as your company expands. Thank you for becoming partners in protecting such a unique and ancient example of early civilization in the Americas.<br>M. Nichols                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/23/2014 | Mail   | Richard Elias          | Pima County Board of Supervisors     | Cultural / Historic resources | Dear Ms. Pereira,<br>It has come to my attention that FirstNet activities might have an impact on Tumamoc Hill, an iconic landmark that towers over the west side of the Tucson metropolitan area, in the Pima County District that I am elected to represent. Tumamoc Hill is a very special place. As a result the Pima County Board of Supervisors, upon which I serve, bought 320 acres of land on and around the hill in 2009 to protect it from development and unsuitable uses. There are now 860 acres of land on and around the hill protected in perpetuity.<br>This hill was inhabited by Native Americans for thousands of years, ancestors of today's Tohono O'odham Nation members, and carries an O'odham name, Tumamoc, which is their word for horned lizard. Remains of their residency and farming on the hill are visible and subject of substantial study.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 12/23/2014 | Mail   | Richard Elias          | Pima County Board of Supervisors     | Biological Resources          | The Carnegie Foundation established a Desert Botanical Laboratory on Tumamoc Hill in 1903 to study scientifically the unique flora of the Sonoran Desert, and the buildings associated with it are together a National Historic Landmark. A University of Arizona operation since 1960, the laboratory has studied desert flora continuously for longer than any other facility in the world. Its records are priceless.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements.                                                                                                                                      |
| 12/23/2014 | Mail   | Richard Elias          | Pima County Board of Supervisors     | Aesthetics / Recreational Use | Tumamoc's unique shape and urban presence set it off as a unique and special sight for area residents and their visitors. The narrow, winding road up it leading to the laboratory has become a very popular exercise path for thousands of local residents.<br>Tumamoc Hill is a special iconic feature that deserves protection and its many fragile features require careful treatment.<br>Sincerely<br>Richard Elias<br>District Five Pima County Supervisor                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/23/2014 | Email  | Sherry Massie          | Public                               | Cultural / Historic resources | Dear Ms. Pereira,<br>I understand that FirstNet is a federal program which will allow first responders all over the U.S. to communicate with each other, as needed, by deploying a new national Wi-Fi network using a reserved public safety broadband range. I think this is a wonderful goal for our nation, but I realize this may also impact a very important historical/archaeological site - the ancient trincheras on Tumamoc Hill in Tucson, AZ. Would you please consider restricting construction to the existing antenna pads so that as little impact as possible occurs to this historic area?<br>Although I have lived in Tucson for 13 years, I only recently visited this site through the auspices of the Arizona Archaeological and Historical Society. I had no idea that there were trincheras there dated to 300 B.C., and that there was evidence of Hohokam settlement dating to 800 A.D. I saw some amazing rock art, as well as evidence of solar markers and alignments.<br>It's an impressive site so close to a major urban area, and one that needs to be preserved for everyone to be able to have to same opportunity as I had to learn and enjoy part of our southwestern legacy.<br>I hope you will be able to complete your Wi-Fi goal as well as helping preserve this important landmark.<br>Thank you for your consideration.<br>Sincerely yours,<br>Sherry Massie | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/24/2014 | Email  | Aaron D. Flesch, Ph.D. | University of Arizona                | Cultural / Historic resources | Dear Ms. Amanda Pereira:<br>It has come my attention that the activities of Firstnet may eventually affect the ecological, social, and cultural values of Tumamoc Hill. Thus, I wanted to write to you to express the value of Tumamoc so that this information can be applied when evaluating the potential impacts of any proposed Firstnet activities on or around Tumamoc.<br>Tumamoc Hill is a National Historic Landmark, a U.S. Archaeological District, and its value to the local, regional, national, and global communities are immense.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |

| 12/24/2014 | Email  | Aaron D. Flesch, Ph.D. | University of Arizona                                                      | Biological Resources          | As an ecologist that works on the Hill, and as a member of the Tucson community that walks the Hill and helps interpret its natural history and ecology to the public, I can speak specifically about Tumamoc's ecological and social values. In the first decade of the 1900s, some of our nation's first ecologists were tasked with locating a site to study desert plants and placing what would become the US' first ecological research station. At that time when the landscape was largely undeveloped and options for placing the stations nearly unlimited, they considered sites in Arizona, New Mexico, California, and the neighboring Mexican states of Sonora and Chihuahua. In the end, they chose Tumamoc for the site because of its remarkable diversity, exceptional natural qualities, and the fact that the Hill and surroundings included a large number of plant communities for study. Those facts speak to the uniqueness and incredible value of the Hill and the natural vegetation that still covers it. For the next 100 years scientists working on the Hill have made immeasurable contributions to our understanding of how the natural world is structured and how it functions, and those activities continue to this day under the leadership of Director Rosenzweig.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/24/2014 | Email  | Aaron D. Flesch, Ph.D. | University of Arizona                                                      | Aesthetics / Recreational Use | As the surroundings around the Hill have changed over the last 100 years, the values of Tumamoc have grown. Tumamoc sees tens or perhaps hundreds of thousands of visitors each year of all ages and backgrounds. Many of those visitors live in a suburban or urban environment where they have little opportunity to experience the Sonoran Desert in its natural state and to connect with nature on deeper spiritual and aesthetic levels. Those qualities and experiences are offered by Tumamoc because of its close proximity to those populations and the accessibility the University of Arizona and the station's Director have provided. Please consider the remarkable and multifaceted values of Tumamoc Hill and the Desert Laboratory in your plans and proposals related to the FirstNet project. Feel free to contact me at the address below if I can be of help.<br>My regards<br>Aaron D. Flesch, Ph.D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/24/2014 | Email  | Brian Metcalf          | Public                                                                     | Cultural / Historic resources | Ms. Amanda: I am contacting you regarding the planned update of the communications infrastructure on Tumamoc Hill for first responders. Tumamoc is almost in the heart of Tucson. It is been a protected area of biological research for over a century, contains invaluable archaeological artifacts that are well over 2000 years old. I ask you to please protect those irreplaceable resources for future generations. Please restrict your construction activities to existing antenna pads.<br>Thank you.<br><br>Brian Metcalf                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/24/2014 | Mail   | Courtney Rose, Ph.D.   | Pima County Sustainability and Conservation                                | Cultural / Historic resources | Dear Ms. Pereira:<br>This letter is a response to the request for comments on the proposed undertaking published in the Notice in the Federal Register (Vol. 79, No. 218). Tumamoc Hill has several important federal and state designations. Comprised of some 870 acres, it is an Archaeological District listed in the National Register of Historic Places and the Desert Laboratory was designated a National Historic Landmark in 1965. In 1976, the Desert Laboratory and Tumamoc Hill were together designated a National Environmental Study Area by the Department of Interior, and designated by the State of Arizona as a State Scientific and Educational Natural Area in 1981. Tumamoc Hill is also considered a traditional cultural property and ancestral site to local Tribes.<br>Tumamoc Hill's peak rises to an elevation of 3,108 ft (947 m) above sea level. Located just west of downtown Tucson in T14S, R13E, Sections 9, 10, 16, and 15, the preservation of its cultural and scientific significance is of great importance to the local community and at a national level. Land ownership includes the University of Arizona on behalf of the Board of Regents, Pima County, Arizona State Land Department, and the City of Tucson.<br>Archaeological surveys of Tumamoc Hill began in the 1970s followed by subsequent limited archaeological excavations. Known as Cemamagi Do'ag in O'odham, Tumamoc Hill, archaeological site designated AZ AA-16-5(ASM), is known to have multiple prehistoric occupations that left behind remnants of large rock walls (trincheras), petroglyphs, agricultural fields, pit-houses, and O'odham cemeteries.<br>A recent undertaking on Tumamoc Hill included the consolidation of wireless facilities and replacing several towers with a single communications tower (by the Pima County Wireless Integrative Network (PCWIN) project implemented in 2014). As the construction included consolidation and the dismantling unused buildings, the overall footprint was reduced. State, Federal, and Tribal consultation resulted in a determination of Adverse Effect to the Area of Potential Effect for Direct Effects and for Visual Effects to the Tumamoc Hill Archaeological District. The undertaking licensed by the Federal Communications Commission (FCC) required an Environmental Assessment to fulfill requirements under the National Environmental Policy Act (NEPA) and a Memorandum of Agreement was executed to fulfill Section 106 of the National Historic Preservation Act (NHPA). Mitigation strategies included archaeological data recovery and cultural sensitivity education program in accordance with the Arizona State Historic Preservation Office and the Advisory Council on Historic Preservation. The University of Arizona Tumamoc Hill Cultural Resources Policy and Management Plan (2008) specifies tribal interests in restoring Tumamoc Hill to its former natural condition. | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/24/2014 | Mail   | Courtney Rose, Ph.D.   | Pima County Sustainability and Conservation                                | Cultural / Historic resources | In summary, Tumamoc Hill official designations include:<br>-The Desert Laboratory (comprising 870 acres on Tumamoc Hill) was designated a National Historic Landmark in 1965, and in 1966 was listed in the National Register of Historic Places (National Register No. 66000190). Active biological studies are ongoing on a portion of the hill, which was designated as a National Environmental Study area in 1976 by the U.S. Department of the Interior and designated as an Arizona State Scientific and Educational Natural Area in 1981 by the Arizona State Parks Board.<br>-The same 870 acres comprises the Tumamoc Hill Archaeological District, which was listed in the National Register of Historic Places in 2010.<br>-The Tohono O'odham Nation, the Hopi Tribe, the Pascua Yaqui Tribe, the Gila River Indian Community, the Ak-Chin Indian Community, and the Salt River Pima-Maricopa Indian Community consider Tumamoc Hill an ancestral site of cultural significance.<br>-Should FirstNet propose to include Tumamoc Hill in its network planning, it is critical that the cultural, natural, and scientific significance of this site be considered and impacts to the site be avoided.<br>Sincerely,<br>Courtney Rose, Ph.D., Program Coordinator<br>Pima County Office of Sustainability & Conservation<br>Cultural Resources and Historic Preservation Division                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/24/2014 | Email  | Courtney Rose, Ph.D.   | Pima County Public Works Center, Office of Sustainability and Conservation | NOI                           | Good afternoon:<br>Please see attached document with comments regarding Tumamoc Hill, located in Tucson, Arizona. The letter is a response to a request for comments by the First Responder Network Authority NOI to Prepare Programmatic Environmental Impact Statements and Conduct Scoping for the Nationwide Public Safety Broadband Network [Federal Register/Vol 79/No. 218].<br>Thank you for your consideration.<br>Courtney Rose                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

Let me know how I can help.<br>Steve<br><br>On Tue, Dec 16, 2014 at 6:36 AM, Long, Russell <longs@longrealty.com> wrote:<br>To Whom It May Concern,<br><br>Tumamoc Hill has been a fixture in our family since the very early 1900's when our great grandfather, Burton Bovee, began working there. Long before we every visited there and as children our mother told us tales of Burton working there, riding his horse and mule all over the Tucson basin collecting samples and specimens. As adults we became aware of the cultural and historical significance of the site as a result of the approximately 3,000 year old Hohokam Indian village atop the hill as well the historic volcanic stone buildings and their current uses. Certainly Tumamoc Hill is a local and national treasure worthy of preservation. Please feel free to contact me if you would like to discuss this or have questions.<br>Thank you.<br>Russell P. Long, CRB, CLHS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

Kennedy      | Public                                                                     | Cultural / Historic resources | Thank you for offering to read our comments on the proposed communications towers on Tumamoc Hill. I study archaeology and am intimately aware of the hill's value as a cultural resource. Communication for first responders is very important, but please be careful with the cultural resources up there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/28/2014 | Email  | Doug Little            | Public                                                                     | Cultural / Historic resources | Please protect the ancient trincheras on Tumamoc Hill by restricting construction to the existing antenna pads, so our first responders can communicate while still allowing Pima County and the University of Arizona to protect this important place of the past.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/28/2014 | Email  | Larry Venable          | University of Arizona                                                      | Cultural / Historic resources | I am writing to explain to you the high cultural, historic and ecological value of Tumamoc, a research station of the University of Arizona in Tucson. This property is sacred to 5 southwestern native American tribes, with human constructions dating back at least 2,000 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

| 12/28/2014 | Email            | Larry Venable      | University of Arizona                          | Biological Resources          | <p>Since 1903 it has been an ecological research station, first of the Carnegie Institute of Washington, now of the University of Arizona. Important work in the history of ecology was and is conducted here. Some ongoing long-term ecological projects have been running for over 100 years and the data has been recently archived at Ecological Archives, Ecological Society of America. There are over 20 ongoing ecological projects, some funded by the National Science Foundation.</p> <p>I invite you to please join us in preserving and enhancing this wonderful long-standing resource.</p> <p>Larry Venable</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/28/2014 | Email            | Marilyn Guida      | Public                                         | Cultural / Historic resources | <p>Dear Ms Amanda Pereira,</p> <p>I write to urge that the FirstNet need for access to Tumamoc Hill in Tucson, Arizona will contribute to preservation of the cultural, archaeological and biological resources of the area by making use of the existing pads for the antennas, transmitters, and other equipment needed by FirstNet.</p> <p>This is an area of cultural significance to the Tohono O'odham Tribe from the 15th Century to modern times. It also contains evidence of occupation from the Early Agricultural Period of the indigenous people as far back as 2,000 years ago as well as the Hohokam people circa A.D. 800 (1100 years ago). This length of human occupation is highly significant and an important reason why modern construction in this area should not be expanded. The University of Arizona currently manages many currently active research projects into the cultural and biological resources of this area. This is an additional reason why expansion of present areas impacted construction should not be allowed.</p> <p>Perhaps most important of all is the impact to the Tohono O'odham people who have used this area for at least five centuries and continue to use it today. As the first Americans, we should respect their longstanding rights to use of Tumamoc Hill as our first priority.</p> <p>Thank you for considering this plea,</p> <p>Marilyn Guida</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/28/2014 | Email            | Michael Rosenzweig | University of Arizona                          | Cultural / Historic resources | <p>Dear Ms Pereira,</p> <p>I have more to add to the FirstNet scoping process.</p> <p>As I promised, I have tracked down and am sending a number of documents relating to Tumamoc Hill. Eight pdf files are attached. (There could have been more if there had been more time.)</p> <p>The files include:</p> <p>** three from county documents of November 2007. One of these contains comments of US Rep Raúl M. Grijalva, as well as the strong point made by Dr. Ned Norris Jr. (Chairman of the Tohono O'odham Nation), i.e., that Tumamoc has spiritual significance to the Nation and other tribes. (By the way, Pima County, in early 2009, did buy the land mentioned in the discussions. I have a video of the auction.)</p> <p>** three from The University of Arizona management plan for Tumamoc. These cover the 2007 plan of the City of Tucson, acknowledgment of the importance of the Hill to native tribes, and restrictions on lessees to prevent further degradation of the Hill.</p> <p>** an excerpt from an Island Press book about restoration ecology, acknowledging that Tumamoc Hill originated this crucial part of environmental conservation.</p> <p>** an excerpt from a recent newsletter of the University's Dept of Ecology &amp; Evolutionary Biology.</p> <p>Thank you again for the care you have taken to learn about our area in preparation for FirstNet planning.</p> <p>Sincerely,</p> <p>Michael Rosenzweig<br/>Director, Tumamoc: People &amp; Habitats<br/>University of Arizona Tucson</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/29/2014 | Email Attachment | Ann McPherson      | U.S. Environmental Protection Agency Region IX | NOI                           | <p>Dear Ms. Pereira :</p> <p>The U.S. Environmental Protection Agency has reviewed the November 12, 2014 Notice of Intent to prepare Programmatic Environmental Impact Statements and Conduct Scoping for the Nationwide Public Safety Broadband Network. Our comments are provided pursuant to the National Environmental Policy Act, Council on Environmental Quality regulations (40 CFR Parts 1500-1508) and § 309 of the Clean Air Act.</p> <p>To assist in the scoping process for this project, we have identified several issues for your attention in the preparation of the Western regional EIS. We are most concerned about the following issues: impacts to water and air, impacts to biological resources, invasive species management, and habitat protection.</p> <p>We appreciate the opportunity to review this NOI and are available to discuss our comments. Please send one hard copy of the Draft PEIS and one CD ROM copy to this office at the same time it is officially filed with our Washington D.C. Office. If you have any questions, please contact me at (415) 972-3545, or contact Scott Sysum, the lead reviewer for this project. | 12/29/2014 | Email Attachment | Ann McPherson      | U.S. Environmental Protection Agency Region IX | Purpose and Need              | <p>US EPA DETAILED COMMENTS ON THE NOTICE OF INTENT TO PREPARE PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENTS AND CONDUCT SCOPING FOR THE NATIONWIDE PUBLIC SAFETY BROADBAND NETWORK, DECEMBER 29, 2014</p> <p>Statement of Purpose and Need</p> <p>The Draft Programmatic Environmental Impact Statement should clearly identify the underlying purpose and need to which the First Responder Network Authority is responding in proposing the alternatives (40 CFR 1502.13). The purpose of the proposed action is typically the specific objectives of the activity, while the need for the proposed action may be to eliminate a broader underlying problem or take advantage of an opportunity.</p> <p>Recommendation:</p> <p>The purpose and need should be a clear, objective statement of the rationale for the proposed project.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.                                                                                                                                                                        |
| 12/29/2014 | Email Attachment | Ann McPherson      | U.S. Environmental Protection Agency Region IX | Alternatives                  | <p>Alternatives Analysis</p> <p>The National Environmental Policy Act requires evaluation of reasonable alternatives, including those that may not be within the jurisdiction of the lead agency (40 CFR Section 1502.14(c)). A robust range of alternatives will include options for avoiding significant environmental impacts. The DPEIS should provide a clear discussion of the reasons for the elimination of alternatives which are not evaluated in detail. Alternative network routes, including buried or aerial options, as well as environmentally preferable routes, should be evaluated. The DPEIS should also evaluate alternative configurations for access roads.</p> <p>The alternatives analysis should describe the approach used to identify the alternative routes and the criteria used to select the different routes.</p> <p>The environmental impacts of the proposed action and alternatives should be presented in comparative form, thus sharply defining the issues and providing a clear basis for choice among options by the decision maker and the public (40 CFR 1502.14). The potential environmental impacts of each alternative should be quantified to the greatest extent possible (e.g., acres of forest impacted, tons per year of emissions produced).</p> <p>Recommendations:</p> <p>The DPEIS should describe how each alternative was developed, how it addresses each project objective, and how it will be implemented. The DPEIS should describe the methodology and criteria used for determining the network route and alternative routes. The alternatives analysis should include a discussion of environmentally preferable options for the network, including the use of underground cables versus overhead wires; alternative configurations for access roads; and alternative methods of construction, such as using heavy lift helicopters to transport and set cell towers.</p> <p>The DPEIS should clearly describe the rationale used to determine whether impacts of an alternative are significant or not. Thresholds of significance should be determined by considering the context and intensity of an action and its effects (40 CFR 1508.27).</p> | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.                                                                                                                                                                        |

| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Water Resources      | <p>Water Resources</p> <p>Geographic Extent of Waters of the United States<br/>The project applicant should coordinate with the U.S. Army Corps of Engineers to determine if the proposed project requires a Section 404 permit under the Clean Water Act. Section 404 regulates the discharge of dredged or fill material into waters of the United States (WUS), including wetlands and other special aquatic sites. The DPEIS should describe all WUS that could be affected by the project alternatives, and include maps that clearly identify all waters within the project area. A jurisdictional delineation will confirm the presence or absence of WUS in the project area and help determine whether or not the proposed project would require a Section 404 permit.</p> <p>Recommendation:<br/>The DPEIS should discuss the potential that WUS could be affected and that consultation with the USACE may be required to determine if there are jurisdictional WUS present at individual project sites.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
|            |                  |               |                                                |                      | <p>Drainages, Ephemeral Washes, and Floodplains<br/>Natural washes perform a diversity of hydrologic, biochemical, and geochemical functions that directly affect the integrity and functional condition of higher-order waters downstream. Healthy ephemeral waters with characteristic plant communities control rates of sediment deposition and dissipate the energy associated with flood flows. Ephemeral washes also provide habitat for breeding, shelter, foraging, and movement of wildlife. Many plant populations are dependent on these aquatic ecosystems and adapted to their unique conditions. The potential damage that could result from disturbance of flat-bottomed washes includes alterations to the hydrological functions that natural channels provide in arid ecosystems, such as adequate capacity for flood control, energy dissipation, and sediment movement; as well as impacts to valuable habitat for desert species.</p> <p>Recommendations:<br/>The DPEIS should discuss the potential that individual projects may impact aquatic features that are determined not to constitute WUS, and discuss potential mitigation.<br/>The DPEIS should address the potential effects of project discharges, if any, on surface water quality.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                           |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Biological Resources | <p>Biological Resources, Habitat and Wildlife</p> <p>The DPEIS should identify all petitioned and listed threatened and endangered species and critical habitat that might occur within individual project areas. The document should identify and quantify which species or critical habitat might be directly, indirectly, or cumulatively affected by each alternative and mitigate impacts to these species. Emphasis should be placed on the protection and recovery of species due to their status or potential status under the federal or state Endangered Species Act. Network line rights of way are anthropogenic disturbances which alter the spatial structure of habitat elements, creating linear patches or line corridors which in turn impact ecological integrity by modifying ecological processes (abiotic &amp; biotic) at various scales. Network line ROWs can result in habitat fragmentation and increased habitat edge effects, affecting individual species with different intensity.</p> <p>Recommendations:<br/>The DPEIS should discuss how the proposed action would comply with ESA requirements, including any necessary ESA Section 7 consultation efforts with the U.S. Fish and Wildlife Service.<br/>EPA recommends that FirstNet coordinate with USFWS field offices and with applicable state biological resource management agencies to ensure that current and consistent surveying, monitoring, and reporting protocols will be applied in protection and mitigation efforts.</p> <p>The DPEIS should describe the potential for habitat fragmentation and obstructions for wildlife movement from the construction of individual projects and other projects in the area.</p> <p>Discuss the need for monitoring, mitigation, and if applicable, translocation management plans for the sensitive biological resources. This could include, but is not limited to, a Bird and Bat Conservation Strategy, a Raven Monitoring, Management, and Control Plan, and Special - Status Plant Impact Avoidance and Mitigation Plan.</p> <p>The DPEIS should include assurances that the design of the aerial lines would be in compliance with current standards and practices that reduce the potential for raptor fatalities and injuries.</p>                                                                                                                                                                                                                                                                                                                          | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Biological Resources | <p>The EPA is also concerned about the potential impacts of construction, installation, and maintenance activities (grading, filling) on habitat. We encourage the use of alternatives that avoid and protect high value habitat and create or preserve linkages between habitat areas. We are also concerned with management of the ROW, specifically vegetation control, in order to prevent natural forest succession. ROW management is usually practiced to protect the system from windfall, contact with trees and branches, and other potential hazards. Additionally access roads are maintained in order to ensure access for maintenance and upkeep of the system components.</p> <p>Recommendations:<br/>The DPEIS should describe potential impacts from construction, installation, and maintenance activities on habitat and threatened and endangered species.</p> <p>The DPEIS should describe the ROW vegetation management techniques to be used and potential associated environmental impacts, especially if mechanical methods or herbicides are to be used.</p> <p>The DPEIS should indicate the location of important wildlife habitat areas. The DPEIS should describe what measures will be taken to protect important wildlife habitat areas and to preserve linkages between them.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
|            |                  |               |                                                |                      | <p>Invasive Species</p> <p>Human actions are the primary means of invasive species introductions. The construction of network lines may cause disturbance of ROW soils and vegetation through the movement of people and vehicles along the ROW, access roads, and laydown areas. These activities can contribute to the spread of invasive species. Parts of plants, seeds, and root stocks can contaminate construction equipment and essentially "seed" invasive species wherever the vehicle travels. Invasive species infestations can also occur during periodic buried/aerial line ROW maintenance activities especially if these activities include mowing and clearing of vegetation. Once introduced, invasive species will likely spread and impact adjacent properties with the appropriate habitat.</p> <p>Executive Order 13112, Invasive Species (February 3, 1999), mandates that federal agencies take actions to prevent the introduction of invasive species, provide for their control, and minimize the economic, ecological, and human health impacts that invasive species cause. Executive Order 13112 also calls for the restoration of native plants and tree species. If the proposed project will entail new landscaping, the DPEIS should describe how the project will meet the requirements of Executive Order 13112.</p> <p>In addition, we encourage alternative management practices that limit herbicide use, focusing instead on other methods to limit invasive species vegetation and decrease fire risk.</p> <p>Recommendations:<br/>The DPEIS should describe the invasive plant management plan used to monitor and control noxious weeds. Herbicides or pesticides will be used to manage vegetation, the DPEIS should disclose the projected quantities and types of chemicals. The invasive plant management plan should identify methods that can be used to limit the introduction and spread of invasive species during and post-construction. These measures can include marking and avoidance of invasive species, timing construction activities during periods that would minimize their spread, proper cleaning of equipment, and proper disposal of woody material removed from the ROW.</p> <p>Because construction measures may not be completely effective in controlling the introduction and spread of invasives, the DPEIS should describe post-construction activities that will be required such as surveying for invasive species following restoration of the construction site and measures that will be taken if infestations are found.</p> |                                                                                                                                                           |

| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Air Quality    | <p>Air Quality</p> <p>The DPEIS should provide a discussion of ambient air conditions (baseline or existing conditions), National Ambient Air Quality Standards, criteria pollutant nonattainment areas, and potential air quality impacts. The DPEIS should describe and estimate air emissions from potential construction and maintenance activities, as well as proposed mitigation measures to minimize those emissions. The EPA recommends an evaluation of the following measures to reduce emissions of criteria air pollutants and hazardous air pollutants (air toxics).</p> <p>Recommendations:</p> <ul style="list-style-type: none"> <li>• Existing Conditions - The DPEIS should provide a detailed discussion of ambient air conditions, NAAQS, and criteria pollutant nonattainment areas in the vicinity of the project.</li> <li>• Quantify Emissions - The DPEIS should estimate emissions of criteria pollutants and green house gasses from the proposed individual projects and discuss the timeframe for release of these emissions over the lifespan of the projects. The DPEIS should describe and estimate emissions from potential construction activities, as well as proposed mitigation measures to minimize these emissions.</li> <li>• Specify Emission Sources - The DPEIS should specify the emission sources by pollutant from mobile sources, stationary sources, and ground disturbance. This source specific information should be used to identify appropriate mitigation measures and areas in need of the greatest attention.</li> <li>• Construction Emissions Mitigation Plan -The DPEIS should include a draft Construction Emissions Mitigation Plan and ultimately adopt this plan in the Record of Decision. In addition to all applicable local, state, or federal requirements, we recommend the following control measures (Fugitive Dust, Mobile and Stationary Source and Administrative) be included in the Construction Emissions Mitigation Plan in order to reduce impacts associated with emissions of particulate matter and other toxics from construction-related activities:</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.</p> |
|            |                  |               |                                                |                | <ul style="list-style-type: none"> <li>o Fugitive Dust: Source Controls: The DPEIS should identify the need for a Fugitive Dust Control Plan to reduce Particulate Matter 10 and Fine Particulate Matter 2.5 emissions during construction and operations. We recommend that the plan include these general commitments:</li> <li>• Stabilize heavily used unpaved construction roads with a non-toxic soil stabilizer or soil weighting agent that will not result in loss of vegetation, or increase other environmental impacts.</li> <li>• During grading, use water, as necessary, on disturbed areas in construction sites to control visible plumes.</li> <li>• Vehicle Speed</li> <li>• Limit speeds to 25 miles per hour on stabilized unpaved roads as long as such speeds do not create visible dust emissions.</li> <li>• Limit speeds to 10 miles per hour or less on unpaved areas within construction sites on un-stabilized (and unpaved) roads.</li> <li>• Post visible speed limit signs at construction site entrances.</li> <li>• Inspect and wash construction equipment vehicle tires, as necessary, so they are free of dirt before entering paved roadways, if applicable.</li> <li>• Provide gravel ramps of at least 20 feet in length at tire washing/cleaning stations, and ensure construction vehicles exit construction sites through treated entrance roadways, unless an alternative route has been approved by appropriate lead agencies, if applicable.</li> <li>• Use sandbags or equivalent effective measures to prevent run-off to roadways in construction areas adjacent to paved roadways. Ensure consistency with the project's Storm Water Pollution Prevention Plan, if such a plan is required for the project.</li> <li>• Sweep the first 500 feet of paved roads exiting construction sites, other unpaved roads en route from the construction site, or construction staging areas whenever dirt or runoff from construction activity is visible on paved roads, or at least twice daily (less during periods of precipitation).</li> <li>• Stabilize disturbed soils (after active construction activities are completed) with a non-toxic soil stabilizer, soil weighting agent, or other approved soil stabilizing method.</li> <li>• Cover or treat soil storage piles with appropriate dust suppressant compounds and disturbed areas that remain inactive for longer than 10 days. Provide vehicles (used to transport solid bulk material on public roadways and that have potential to cause visible emissions) with covers. Alternatively, sufficiently wet and load materials onto the trucks in a manner to provide at least one foot of freeboard.</li> <li>• Use wind erosion control techniques (such as windbreaks, water, chemical dust suppressants, and/or vegetation) where soils are disturbed in construction, access and maintenance routes, and materials stock pile areas. Keep related windbreaks in place until the soil is stabilized or permanently covered with vegetation.</li> </ul> | <p>The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.</p> |
|            |                  |               |                                                |                | <ul style="list-style-type: none"> <li>o Mobile and Stationary Source Controls:</li> <li>• If practicable, lease new, clean equipment meeting the most stringent of applicable Federal 1 or State Standards.2 In general, commit to the best available emissions control technology. Tier 4 engines should be used for project construction equipment to the maximum extent feasible.3</li> <li>• Where Tier 4 engines are not available, use construction diesel engines with a rating of 50 hp or higher that meet, at a minimum, the Tier 3 California Emission Standards for Off-Road Compression-Ignition Engines,4 unless such engines are not available.</li> <li>• Where Tier 3 engine is not available for off-road equipment larger than 100 hp, use a Tier 2 engine, or an engine equipped with retrofit controls to reduce exhaust emissions of nitrogen oxides and diesel particulate matter to no more than Tier 2 levels.</li> <li>• Consider using electric vehicles, natural gas, biodiesel, or other alternative fuels during construction and operation phases to reduce the project's criteria and greenhouse gas emissions.</li> <li>• Plan construction scheduling to minimize vehicle trips.</li> <li>• Limit idling of heavy equipment to less than 5 minutes and verify through unscheduled inspections.</li> <li>• Maintain and tune engines per manufacturer's specifications to perform at EPA certification levels, prevent tampering, and conduct unscheduled inspections to ensure these measures are followed.</li> <li>o Administrative controls:</li> <li>• Develop a construction traffic and parking management plan that maintains traffic flow and plan construction to minimize vehicle trips.</li> <li>• Identify any sensitive receptors in the project area, such as children, elderly, and the infirm, and specify the means by which impacts to these populations will be minimized (e.g. locate construction equipment and staging zones away from sensitive receptors and building air intakes).</li> <li>• Include provisions for monitoring fugitive dust in the fugitive dust control plan and initiate increased mitigation measures to abate any visible dust plumes.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.</p> |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Infrastructure | <p>Hardening of Infrastructure</p> <p>We understand that FirstNet will likely utilize existing commercial infrastructure to the maximum extent possible in its deployment of the Public Safety Broadband Network. Most likely, existing cellular towers, transport backhaul and data centers will need to be hardened to meet the stringent requirements of the PSBN. Hardening typically includes back up power supply, incorporating backhaul that is not easily disrupted (microwave or satellite), and stockpiling portable sites (Cell on Light Trucks or Cell on Wheels). Some of the larger cell phone companies have been hardening their infrastructure in disaster prone areas.</p> <p>Recommendation:</p> <p>The DPEIS should discuss the need for hardening sites, the use of portable equipment and the need for redundant or alternative backhaul equipment. FirstNet should commit to using as much commercially available equipment as possible and consider using as much renewable energy sources for backup power as is economically feasible.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.</p> |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Climate Change | <p>Climate Change</p> <p>Scientific evidence supports the concern that continued increases in greenhouse gas emissions resulting from human activities will contribute to climate change. Global warming is caused by emissions of carbon dioxide and other heat-trapping gases. On December 7, 2009, the EPA determined that emissions of GHGs contribute to air pollution that "endangers public health and welfare" within the meaning of the Clean Air Act. One report indicates that observed changes in temperature, sea level, precipitation regime, fire frequency, and agricultural and ecological systems reveal that parts of the western United States is already experiencing the measurable effects of climate change. 5 The report indicates that climate change could result in the following changes: poor air quality; more severe heat; increased wildfires; shifting vegetation; declining forest productivity; decreased spring snowpack; water shortages; a potential reduction in hydropower; a loss in winter recreation; agricultural damages from heat, pests, pathogens, and weeds; and rising sea levels resulting in shrinking beaches and increased coastal floods.</p> <p>Recommendation:</p> <p>The DPEIS should consider how climate change could potentially influence the proposed project, specifically within sensitive areas, and assess how the projected impacts could be exacerbated by climate change.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.</p> |

| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Waste                           | <p>Hazardous Materials/Hazardous Waste/Solid Waste</p> <p>The DPEIS should address potential direct, indirect and cumulative impacts of hazardous waste from construction and operation of the proposed individual projects and facilities. The document should identify projected hazardous waste types and volumes, and expected storage, disposal, and management plans. It should address the applicability of state and federal hazardous waste requirements. Appropriate mitigation should be evaluated, including measures to minimize the generation of hazardous waste (i.e., hazardous waste minimization). Alternate industrial processes using less toxic materials should be evaluated as mitigation since such processes could reduce the volume or toxicity of hazardous materials requiring management and disposal as hazardous waste.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Cumulative and Indirect Impacts | <p>Cumulative and Indirect Impacts</p> <p>The cumulative impacts analysis should identify how resources, ecosystems, and communities in the vicinity of the project have already been, or will be, affected by past, present, or future activities in the project area. These resources should be characterized in terms of their response to change and capacity to withstand stresses. Trends data should be used to establish a baseline for the affected resources, to evaluate the significance of historical degradation, and to predict the environmental effects of the project components.</p> <p>For the cumulative impacts assessment, we recommend focusing on resources of concern or resources that are "at risk" and/or are significantly impacted by the proposed project, before mitigation. The EPA supports a regional assessment of the potential cumulative effects of other projects in the area to a range of resources, including aquatic, biological, and cultural resources. These findings should help inform current and future development proposed in the region.</p> <p>The EPA assisted in the preparation of a guidance document for assessing cumulative impacts in California that we find to be very useful. While this guidance was prepared for transportation projects in California, the principles and the 8-step process outlined therein can be applied to other types of projects and offers a systematic way to analyze cumulative impacts for a project. The guidance is available at: <a href="http://www.dot.ca.gov/ser/cumulative_guidance/purpose.htm">http://www.dot.ca.gov/ser/cumulative_guidance/purpose.htm</a>. In accordance with this guidance, the EPA recommends that the DPEIS identify which resources are analyzed, which ones are not, and why. For each resource analyzed, the DPEIS should:</p> <ul style="list-style-type: none"> <li>• Identify the current condition of the resource as a measure of past impacts. For example, the percentage of species habitat lost to date.</li> <li>• Identify the trend in the condition of the resource as a measure of present impacts. For example, the health of the resource is improving, declining, or in stasis.</li> <li>• Identify all on-going, planned, and reasonably foreseeable projects in the study area that may contribute to cumulative impacts.</li> <li>• Identify the future condition of the resource based on an analysis of impacts from reasonably foreseeable projects or actions added to existing conditions and current trends.</li> <li>• Assess the cumulative impacts contribution of the proposed alternatives to the long-term health of the resource, and provide a specific measure for the projected impact from the proposed alternatives.</li> <li>• When cumulative impacts are identified for a resource, mitigation should be proposed.</li> <li>• Disclose the parties that would be responsible for avoiding, minimizing, and mitigating those adverse impacts.</li> <li>• Identify opportunities to avoid and minimize impacts, including working with other entities.</li> </ul> <p>Recommendations:<br/>The DPEIS should consider the cumulative impacts associated with other development projects proposed in the individual project areas and the potential impacts on various resources including: water supply, endangered species, and habitat.</p> | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Cultural / Historic resources   | <p>Coordination with Tribal Governments</p> <p>Executive Order 13175, Consultation and Coordination with Indian Tribal Governments (November 6, 2000), was issued in order to establish regular and meaningful consultation and collaboration with tribal officials in the development of federal policies that have tribal implications, and to strengthen the United States government-to-government relationships with Indian tribes.</p> <p>Recommendation:<br/>The DPEIS should describe the process and outcome of government-to-government consultation between FirstNet and each of the tribal governments within the individual project areas, issues that were raised (if any), and how those issues were addressed in the selection of the proposed alternative.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
|            |                  |               |                                                |                                 | <p>National Historic Preservation Act and Executive Order 13007</p> <p>Consultation for tribal cultural resources is required under Section 106 of the National Historic Preservation Act. Historic properties under the NHPA are properties that are included in the National Register of Historic Places or that meet the criteria for the National Register. Section 106 of the NHPA requires a federal agency, upon determining that activities under its control could affect historic properties, consult with the appropriate State Historic Preservation Officer/Tribal Historic Preservation Officer. Under NEPA, any impacts to tribal, cultural, or other treaty resources must be discussed and mitigated. Section 106 of the NHPA requires that Federal agencies consider the effects of their actions on cultural resources, following regulation in 36 CFR 800.</p> <p>Executive Order 13007, Indian Sacred Sites (May 24, 1996), requires federal land managing agencies to accommodate access to, and ceremonial use of, Indian sacred sites by Indian Religious practitioners, and to avoid adversely affecting the physical integrity, accessibility, or use of sacred sites. It is important to note that a sacred site may not meet the National Register criteria for a historic property and that, conversely, a historic property may not meet the criteria for a sacred site.</p> <p>Recommendation:<br/>The DPEIS should address the existence of Indian sacred sites in the individual project areas. It should address Executive Order 13007, distinguish it from Section 106 of the NHPA, and discuss how FirstNet will avoid adversely affecting the physical integrity, accessibility, or use of sacred sites, if they exist. The DPEIS should provide a summary of all coordination with Tribes and with the SHPO/THPO (if any), including identification of NRHP eligible sites, and development of a Cultural Resource Management Plan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Environmental Justice           | <p>Environmental Justice and Impacted Communities</p> <p>Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (February 11, 1994) and the Interagency Memorandum of Understanding on Environmental Justice (August 4, 2011) direct federal agencies to identify and address disproportionately high and adverse human health or environmental effects on minority and low-income populations, allowing those populations a meaningful opportunity to participate in the decision-making process.</p> <p>Guidance by CEQ clarifies the terms low-income and minority population (which includes Native Americans) and describes the factors to consider when evaluating disproportionately high and adverse human health effects.</p> <p>Recommendations:<br/>The DPEIS should discuss the potential need to evaluate environmental justice populations within the geographic scope of the individual projects. If such populations exist, the DPEIS should discuss the potential for disproportionate adverse impacts to minority and low-income populations, and the approaches used to foster public participation by these populations. Assessment of the projects impact on minority and low-income populations should reflect coordination with those affected populations.</p> <p>The DPEIS should discuss the potential need to provide outreach to all communities that could be affected by the individual projects.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |
| 12/29/2014 | Email Attachment | Ann McPherson | U.S. Environmental Protection Agency Region IX | Land Use                        | <p>Coordination with Land Use Planning Activities</p> <p>The DPEIS should discuss how the proposed action would support or conflict with the objectives of federal, state, tribal or local land use plans, policies and controls in the individual project areas. The term "land use plans" includes all types of formally adopted documents for land use planning, conservation, zoning and related regulatory requirements. Proposed plans not yet developed should also be addressed if they have been formally proposed by the appropriate government body in a written form (CEQ's Forty Questions, #23b).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders. |

| 12/29/2014 | Email Attachment | Ann McPherson    | U.S. Environmental Protection Agency Region IX | Public Health and Safety      | <p>Public Health and Safety - Valley Fever</p> <p>Coccidioidomycosis, (kok-sid-oy-doh-my-KOH-sis), or Valley Fever, is a fungal infection that is almost always acquired from the environment via the inhalation of fungal spores. It can affect humans, many species of mammals and some reptiles .7 The fungus, Coccidioides, is endemic in the soil of the southwestern United States, Mexico, and parts of Central and South America. Coccidioides can live for long periods of time in soil under harsh environmental conditions including heat, cold, and drought; 8 Coccidioides can be released into the air when soil containing the fungus is disturbed, either by strong winds or activities such as farming or construction. Distribution of the fungus is typically patchy, but in some "hot spots," up to 70% of the human population has been infected. The number of reported Valley Fever cases in the U.S. has risen from less than 5,000 in 2001 to more than 20,000 cases in 2011.9 An estimated 150,000 more cases go undiagnosed every year. The majority of reported cases are located in Arizona and California. 10 The reason for the recent increase in cases, however, is unclear. Dust storms in endemic areas are often followed by outbreaks of coccidioidomycosis. If the dust storms are severe, the fungal spores can be carried outside the endemic area into neighboring counties, where outbreaks follow. According to the Centers for Disease Control and Prevention, workers engaged in soil-disturbing activities in endemic areas should be considered at risk for the disease. 12 Occupational groups at risk include farmers, agricultural workers, construction workers and archaeologists. Some groups of people appear to be at increased risk for disseminated disease and can become seriously ill when infected. People at risk for severe disease include those with weakened immune systems, persons with cancer or who are on chemotherapy, or persons who are HIV-infected. Also at higher risk for serious illness are the elderly, persons of African or Filipino descent, and women in the third trimester of pregnancy. Recommendations: The EPA recommends that the DPEIS discuss potential exposures to the fungus, Coccidioides, and susceptibilities of workers and nearby residents to Valley Fever due to soil-disturbing activities of the project. The Environmental Awareness Program for the workers should include training on the health hazards of Valley Fever, how it is contracted, what symptoms to look for, proper work procedures, how to use personal protective equipment, the need to wash prior to eating, smoking or drinking and at the end of the shift, and the need to inform the supervisor of suspected symptoms of work-related Valley Fever. The training should identify those groups of individuals most at risk and urge individuals to seek prompt medical treatment if Valley Fever symptoms (flu-like illness with cough, fever, chest pain, headache, muscle aches, and tiredness) develop.</p> | The Programmatic Environmental Impact Statements will comply with all requirements under NEPA and other relevant laws, regulations, and Executive Orders.                                                                                                                                                                        |
| 12/29/2014 | Mail             | Diana Rhoades    | Public                                         | Cultural / Historic resources | <p>Dear Ms. Pereira,</p> <p>Tumamoc Hill is a sacred place. It is on the National Register of Historic Places. It is a landmark, it is a University research station, studying plants and the changes in climate since 1903. It is a national archeological district, a burial ground for Native American People. It was an early trading post for the First People. It is rich in natural and cultural history. It should not be a place where the government places large towers or builds huge power lines. I hope you will carefully consider all the implications of FirstNet.</p> <p>All my best</p> <p>Diana Rhoades</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/29/2014 | Email            | Doug Gann, Ph.D. | Archaeology Southwest                          | Cultural / Historic resources | <p>Dear Firstnet</p> <p>I am writing in support of what I understand will be a new installation for our first responders on top of Tumamoc Hill in Tucson Arizona.</p> <p>I would like to offer the suggestion that Firstnet keep any new construction to areas of this hilltop that have already been disturbed by previous construction activities.</p> <p>We have known Tumamoc was an important archaeological site for 100 years, but it has only been in the past 10 years that the evidence has been understood in proper contexts. The ancient homes built on Tumamoc were constructed at the beginning of what we now know of as the ancient southwest culture area. The Cliff Dwellings in Mesa Verde, the stunning buildings of Chaco Canyon, the 5 story adobe Casa Grande, all of these places were built by a people who apparently got their start 4000 years ago, along the Santa Cruz River, where modern Tucson sits today.</p> <p>Though partially disturbed, the village on top of Tumamoc still contains evidence about how this pan-Southwestern culture began. What has not been destroyed should be preserved when ever possible.</p> <p>I think everyone in the archaeological community believes that your project needs to be supported, our community's safety has to come first. However, if new construction can be steered away from archaeologically critical areas, we also believe that we can achieve a win-win scenario here.</p> <p>Best Wishes,</p> <p>Doug Gann, Ph.D.</p> <p>Preservation Archaeologist</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. Once specific projects are identified, FirstNet will work with the appropriate federal, state, and local agencies, and federally-recognized Indian tribes, to comply with all requirements. |
| 12/29/2014 | Email            | Scott Sysum      | U.S. Environmental Protection Agency Region IX | NOI                           | <p>Dear Ms. Pereira</p> <p>I have been assigned as the lead reviewer for the U.S. EPA Region 9 for the FirstNet National Public Safety Broadband Network PEIS Project. I have attached a pdf file of our scoping comment letter regarding this project. The signed letter was mailed today to Ms. Amanda Pereira.</p> <p>Thank you for providing us the opportunity to review this interesting project. Please feel free to contact us if you have any questions, seek clarifications or if we can help in any other way.</p> <p>v/r</p> <p>Scott Sysum</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 12/30/2014 | Email Attachment | ph7890@aol.com   | Public                                         | Alternatives                  | <p>The FirstNet Dilemma</p> <p>In order for FirstNet to succeed, it must provide broadband wireless service to public safety users for less than market rates. In addition, the FirstNet infrastructure must be more robust and more resilient than commercial wireless networks. The only way for FirstNet to achieve both of these goals is to leverage excess Nationwide Public Safety Broadband Network (NPSBN) capacity to create a revenue stream that subsidizes public safety user recurring monthly fees to the point that no commercial operator can undercut them.</p> <p>If the recurring monthly fees charged to public safety users by FirstNet is not significantly lower than commercial wireless rates, the commercial networks will likely simply lower their rates for public safety subscribers to undercut and undermine FirstNet. Financially strapped localities will likely choose the less expensive commercial network rather than subscribe to FirstNet, despite the fact that FirstNet will offer priority access to a more robust network. If such a scenario plays out, FirstNet will fail.</p> <p>Rather than becoming a customer of commercial wireless network operators, public safety should leverage the excess capacity in the NPSBN so that commercial operators and other secondary users become FirstNet customers, not vice versa. If Public Safety does not control the network, it will never achieve its goal of unrestricted priority access to broadband wireless, supported by a public safety grade (bulletproof) network infrastructure.</p> <p>One way to address the FirstNet Dilemma is for FirstNet to petition the FCC to issue an Order that would require all new 700MHz broadband wireless subscriber devices be capable of accessing FirstNet spectrum (Band 14). This single regulatory action would create an immediate market for FirstNet spectrum, even in the absence of a deployed network. By creating an environment that ensures that band 14 capable devices become ubiquitous, the FCC Order would increase the value of FirstNet spectrum to potential lessees, enabling FirstNet to generate a revenue stream prior to the deployment of the NPSBN simply by leasing the spectrum until the NPSBN is ready to deploy in a given locale. In addition, the FCC Order would ensure the availability of band 14 devices and substantially lower their cost to public safety users when the NPSBN is deployed.</p> <p>Every day that FirstNet spectrum lays fallow is a lost opportunity to generate revenue that could help fund NPSBN construction, deployment and ongoing operating expenses. Once the NPSBN is deployed, FirstNet (or the designated local network operator) could continue to lease excess NPSBN capacity to secondary users through a public private partnership, thus reducing public safety user recurring user recurring monthly fees to a level far below commercial market rates, whilst encouraging public safety network participation and discouraging potential competitors.</p>              | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

| 12/31/2014 | Email  | Patricia A. Gilman, Ph.D., RPA | University of Arizona | Cultural / Historic resources | <p>Ms. Pereira,</p> <p>I am writing in support of the idea that FirstNet use the existing antenna pads on Tumamoc Hill in Tucson. The entire top and sides of the hill are an archaeological site that is very important in the history of Tucson. It has hundreds of rock-ringed houses that are about 2000 years old along with petroglyphs and a very early community building. For an archaeologist like me, it is a very cool site because it has told us about the lives of people living at this time in the Tucson Basin. The site is unique, by the way. There are no others like it, which suggests its importance. Most of the site has not been excavated, and so there is much more we could learn here. But the most important thing is to preserve the site for the future so that others, both the public and archaeologists, can appreciate the lives of these people.</p> <p>Please do the right thing for the history of Tucson and use only the existing antenna pads. That way, everyone gets what they want and need.</p> <p>Thank you for your attention to this.<br/>Patricia A. Gilman, Ph.D., RPA</p> | FirstNet does not yet have a network design, however we will work to avoid adverse impacts to sensitive resources wherever possible. | 1/1/2015   | Email  | Paul Mirocha                   | Public                | Aesthetics / Recreational Use | <p>Dear Amanda,</p> <p>Mike Rosenzweig, my boss at Tumamoc: People and Habitats, asked me to comment on my perspective on Tumamoc Hill. I have been artist-in-residence there since 2011. You can see a more of what I've done there on my blog: <a href="http://TumamocSketchbook.com">http://TumamocSketchbook.com</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Geology                       | <p>What is Tumamoc Hill?</p> <p>It's a highly protected natural wild-lands Sonoran Desert mountain, National Historic Landmark, ecological research preserve, U.S. Archaeological District, and community icon—all of two miles from downtown and surrounded by growing urban Tucson.</p> <p>But there is no single description of Tumamoc Hill that is complete. There are many layers to the place, with different meanings depending on who you are talking to.</p> <p>A geologist will tell you that Tumamoc is an inselberg of volcanic rock remaining from eruptions between 20 – 30 million years ago. And it originally was formed near what is now the Santa Catalina Mountains.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                   | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Cultural / Historic resources | <p>A paleontologist will tell you that the current Sonoran Desert environment came about 8–15 million years ago during a drying trend, when the unique desert plants here evolved from tropical ancestors moving north from Mexico.</p> <p>The Tohono O'odham call it Cemamag! Doag, "Horned Lizard Mountain." The Hill is considered a sacred ancestral site for O'odham, Yaqui, and Hopi Indians.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Infrastructure                | <p>The summit is now a site for a number of communications and homeland security communications towers, yet this role has probably been played for thousands of years. We know that up until historic times, Sentinel Peak, Tumamoc's sister peak was used, for it's broad view of the valley, as a lookout post, especially for marauding Apaches.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Cultural / Historic resources | <p>It has been called many names. Lawrence Clark Powell, famed librarian and writer who lived in Tucson, called Tumamoc "Tucson's Acropolis." It's been called by various names, including "A Mecca for botanists, and "The Jerusalem of desert rats."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Biological Resources          | <p>The first thing a modern ecologist will say to you is "don't stray off the road." Beginning with the establishment of the Desert Botanical Laboratory in 1903 by the Carnegie Institution of Washington, Tumamoc is the oldest continually monitored ecological research preserve in the world, with data from over 100 years of study. This is the world's first restoration ecology project. The nature here is to look at, to study, to appreciate, but not to exploit—not even to use.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Cultural / Historic resources | <p>To an archeologist, Tumamoc is a mystery that would challenge even Sherlock Holmes. Ruins of cultures living on Tumamoc go back 3,500 years, and at various times in prehistory, the Tumamoc hilltop was probably an important landmark, cultural focal point, and ceremonial ground.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Aesthetics / Recreational Use | <p>To the thousands of people who walk the road daily (only authorized vehicles are allowed) Tumamoc is the best workout in town, a treadmill with a spectacular view. It's a source of healing and health. It's a place where one can stroll among grazing deer five minutes from downtown. Dig a little deeper and many walkers will confide that Tumamoc is a very personal emotional or spiritual sanctuary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/1/2015   | Email  | Paul Mirocha                   | Public                | Cultural / Historic resources | <p>Urban culture and ecological research can co-exist on Tumamoc Hill. It is a sanctuary for humans as well as other Sonoran Desert life forms, but the boundaries are clear: no one steps off the road without special permission. Scientists have protected the Hill for the last century. Now it's up to the community to take part in stewardship of the Hill as a special place and a cultural value for the next 100 years.</p> <p>At that time, we'll check in again and see how it's going. In the mean time I urge Firstnet to join the other institutions, groups, and governmental entities that are united as part of the stewardship of this valuable site.</p> <p>best regards,<br/>Paul Mirocha</p>                                                                                                                                                                                                                                                                                                                                                                                                              | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/3/2015   | Email  | Marc Severson                  | Public                | Cultural / Historic resources | <p>Dear Ms. Pereira,</p> <p>I am writing to urge you to protect the cultural resources on the top of Tumamoc Hill in Tucson. This historic/prehistoric site has unique constructions that give insight into the prehistory of the Southwest. Further constructions endangers these resources.</p> <p>There are archaeological resources on and around this site that are irreplaceable. Considerable damage has already occurred over the years.</p> <p>I urge you to limit construction on this site to areas that have been previously disturbed and allow no further destruction of these resources.</p> <p>Thank you,<br/>Marc Severson</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |
| 1/6/2015   | Email  | Matt Goode                     | University of Arizona | Biological Resources          | <p>Dear Ms. Pereira,</p> <p>I am a Research Scientist at the University of Arizona and my lab is situated on Tumamoc Hill. I am writing to let you know how important Tumamoc Hill is to me and my students, as well as the community of Tucson. I have been conducting research on reptiles on Tumamoc for the past three years. Besides providing us with an incredible opportunity to better understand how reptiles persist in fragmented habitats, Tumamoc also enables us to provide unprecedented opportunities to educate the general public about scientific research and conservation of natural resources. Your help in keeping Tumamoc Hill healthy and productive is greatly appreciated by a lot of diverse stakeholders who care about Tucson's history and it's future!</p> <p>Thank you so much for your support!<br/>Matt</p>                                                                                                                                                                                                                                                                                 | Thank you for your comment.                                                                                                                                                                                                                                                                                                      |

## ENVIRONMENTAL LAWS AND REGULATIONS

The proposed implementation of the Proposed Action must meet the requirements of the National Environmental Policy Act and other applicable federal laws and regulations, Executive Orders, and implementing guidance for the resource areas evaluated in the Programmatic Environmental Impact Statement. Titles are listed alphabetically.

**Table 1: Applicable Laws and Regulations, Executive Orders, and Guidance**

| Title                                                                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| American Indian Religious Freedom Act (AIRFA)<br>(42 USC §1996)                                                   | Protects and preserves for American Indians their inherent right of freedom to believe, express, and exercise the traditional religions of the American Indian, Alaska Native, and Native Hawaiians, including access to culturally significant sites, use and possession of sacred objects, and the freedom to worship through ceremonial and traditional rites.                                                                                                                                                                                                              |
| Archaeological Resources Protection Act of 1979 (ARPA)<br>(16 USC §§ 470aa-470mm; Pub. L. No. 96-95)              | Establishes requirements to protect archaeological resources and sites on public lands and Indian lands, including civil and criminal penalties for the destruction or alteration of cultural resources.                                                                                                                                                                                                                                                                                                                                                                       |
| Bald and Golden Eagle Protection Act<br>(16 USC § 668 et seq.)                                                    | Prohibits the taking, possession, sale, purchase, barter, or offer to sell, purchase, or barter, export, or import of any part of a bald eagle or golden eagle.                                                                                                                                                                                                                                                                                                                                                                                                                |
| Clean Air Act (CAA)<br>(42 USC §§ 7401-7671g)                                                                     | Protects air quality; authorizes the U.S. Environmental Protection Agency (USEPA) to establish National Ambient Air Quality Standards for six criteria pollutants that threaten human health and welfare: carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO <sub>2</sub> ), ozone (O <sub>3</sub> ), sulfur dioxide (SO <sub>2</sub> ), and particulate matter with a diameter equal to or less than 10 microns (PM <sub>10</sub> ) or less than 2.5 microns (fine particles) (PM <sub>2.5</sub> ). Includes provisions for reducing soil erosion to preserve air quality. |
| Coastal Barrier Improvement Act of 1990 (CBIA)<br>(Pub. L. No. 101-591)                                           | Adds additional areas to the Coastal Barrier Resources System and secondary barriers within large embayments (coastline indentations that form a bay), and establishes a process to transfer interests in land to public or non-profit conservation organizations.                                                                                                                                                                                                                                                                                                             |
| Coastal Barrier Resources Act of 1982 (CBRA)<br>(Pub. L. No. 97-348)                                              | Established the John H Chafee Coastal Barrier Resource System to protect sensitive and vulnerable barrier islands found along the U.S. Atlantic, Gulf, and Great Lakes coastlines, as well as Puerto Rico and the U.S. Virgin Islands.                                                                                                                                                                                                                                                                                                                                         |
| Coastal Zone Management Act (CZMA)<br>(16 USC § 1451 et seq.)                                                     | Enacted to protect the coastal environment from growing demands associated with residential, recreational, commercial and industrial uses. Coastal states with an approved Coastal Zone Management Plan identifying permissible land and water use within the state's coastal zone can review federal actions for federal consistency to determine if the actions are consistent with the state program's enforceable policies.                                                                                                                                                |
| Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA - Superfund Law)<br>(42 USC § 9601) | Authorizes the USEPA to respond to releases, or threatened releases, of hazardous substances that may endanger public health, welfare, or the environment. Requires the USEPA to establish criteria for determining priorities among releases (or threatened releases) of hazardous substances for the purpose of taking remedial action.                                                                                                                                                                                                                                      |

| Title                                                                                                                                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Construction, Marking, and Lighting of Antenna Structures of the Federal Communications Commission regulations, Part 17<br>(47 CFR Chapter 1)                    | Governs communications infrastructure under Part 17, which prescribes procedures for antenna structure registration and requires the Federal Aviation Administration (FAA) to conduct an aeronautical study of the navigation airspace to determine appropriate tower marking and lighting requirements for safe airspace. Before the Federal Communications Commission authorizes the construction of new antennae or alteration of existing antennae structures, an FAA determination of “no hazard” may be required. FAA notification is required for new any construction greater than 200 feet above the ground, and near an airport runway (if near an airport runway, taller than 100:1 for a horizontal distance of 20,000 feet away from the nearest runway, 50:1 for a horizontal distance of 10,000 feet away from the nearest runway, and 25:1 for a horizontal distance of 5,000 feet of a heliport). The FAA can vary marking and lighting when requested if aviation safety is not compromised. |
| Council on Environmental Quality Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act (NEPA)<br>(40 CFR §§ 1500-1508) | Provides direction to ensure compliance with procedures to achieve the goals of NEPA. Public officials are able to make decisions based on understanding of environmental consequences and take actions to protect, restore, and enhance the environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Critical Infrastructure Protection Act of 2001<br>(42 USC § 5195)                                                                                                | Defines critical infrastructure as the assets, systems, and networks (physical or virtual) vital to the U.S., which if incapacitated or destroyed, would have a debilitating effect on security, national economic security, public health or safety, or a combination of these.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Disaster Mitigation Act of 2000 (DMA 2000)<br>(Pub. L. No. 106-390)                                                                                              | Establishes the basis for Federal Environmental Management Agency disaster mitigation planning requirements as a condition of mitigation grant assistance to states, tribes, and local governments. Mitigation planning may be incorporated into a comprehensive master plan identifying hazards, analyzing risks, establishing priorities, and describing specific actions to address those risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA)<br>(42 USC §§ 11004-11049)                                                                    | Improves community access to information about chemical hazards and facilitates the development of chemical emergency response plans by states, tribes, and local governments. Establishes the Toxic Release Inventory to inform the public about potentially dangerous chemicals in their community.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Endangered Species Act (ESA) of 1973<br>(16 USC § 1531 et seq.)                                                                                                  | Ensures the protection and recovery of imperiled species and the habitats upon which they depend. Prohibits take, which is defined as harming, up to and including killing, or harassing a listed species. Section 7 of the ESA requires federal agencies to ensure that any action it authorizes, funds, or carries out is not likely to jeopardize the threatened or endangered species or result in destruction or adverse modification of critical habitat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Energy Independence and Security Act of 2007<br>(Pub. L. No. 110-140)                                                                                            | Expands the production of renewable fuels and contains provisions for energy efficiency, smart grid, and carbon dioxide and incentives for plug-in hybrid electric vehicles to assist the electric power industry’s efforts to reduce greenhouse gas emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Energy Policy Act of 2005<br>(Pub. L. No. 109-58)                                                                                                                | Provides tax incentives and loan guarantees for energy production of various types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Farmland Protection Policy Act of 1981 (FPPA)<br>(Pub. L. No. 97-98; 7 USC § 4201)                                                                               | Requires federal agencies to examine the potentially adverse effects to “prime” and “unique” farmland resources before approving any action that would irreversibly convert farmlands to non-farm uses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Federal Facility Compliance Act of 1992<br>( <i>Pub. L. No. 102-386</i> )                       | Amends the Solid Waste Disposal Act and expands the enforcement authority of federal and state regulators with respect to solid and hazardous waste management at federal facilities. Requires federal facilities to pay any nondiscriminatory fees or service charges assessed in connection with a federal, state, interstate, or local solid or hazardous waste regulatory program. Waives immunity for federal facilities under solid and hazardous waste laws by allowing states to fine and penalize for violations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Federal Insecticide, Fungicide, and Rodenticide Act ( <i>7 USC § 136 et seq.</i> )              | Provides for regulation of the distribution, sale, and use of pesticides. Pesticides are generally defined as substances for preventing, destroying, repelling, or mitigating pests; substances for use as a plant regulator, defoliant, or desiccant; and any nitrogen stabilizer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Federal Land Policy and Management Act of 1976<br>( <i>43 USC § 1701 et seq.</i> )              | Directs management of public lands, administered by the Bureau of Land Management, to protect the quality of the land and preserve certain public lands in their natural conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Federal Telecommunications Act of 1996                                                          | Establishes general criteria for the siting of telecommunication facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Federal Water Pollution Control Act (Clean Water Act [CWA])<br>( <i>33 USC § 1251 et seq.</i> ) | Protects water quality and aims to restore and maintain the chemical, physical, and biological integrity of “waters of the United States.” Section 303(d) requires states and USEPA to identify waters not meeting state, territory, or tribal water quality standards and to develop total maximum daily loads, defined as the maximum amount of a pollutant a waterbody can receive and still meet water quality standards. After determining total maximum daily loads for impaired waters, states are required to identify all point and nonpoint sources (runoff) of pollution in a watershed that are contributing to the impairment and to develop an implementation plan that will allocate reductions to each source in order to meet the state standards. Section 320 establishes the National Estuary Program, which identifies nationally significant estuaries threatened by pollution, and requires federal grants to states, interstate, and regional water pollution control agencies to prepare and implement conservation and management plans. Section 404 addresses prohibition and permitting for dredged materials and fill material into waters of the United States. |
| Fish and Wildlife Conservation Act of 1980<br>( <i>16 USC §§2901-2911</i> )                     | Declares that fish and wildlife are of ecological, educational, aesthetic, cultural, recreational, economic, and scientific value to the nation, and encourages all federal agencies to conserve and promote conservation of non-game fish and wildlife and their habitats.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Fish and Wildlife Coordination Act of 1934<br>( <i>16 USC §§ 661-667e</i> )                     | Mandates that fish and wildlife resources receive adequate and equal consideration in conjunction with other values during the planning of water resources development projects that may conflict with the goal of conserving fish and wildlife resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Flood Plain Management Criteria for Flood-prone Areas<br>( <i>44 CFR § 60.3</i> )               | Provides guidance on Federal Emergency Management Agency floodplain management criteria for land management and use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Intermodal Surface Transportation Efficiency Act of 1991<br>( <i>23 USC § 101 [note]</i> )      | Establishes new U.S. transportation planning and policy for highway construction, highway safety, and mass transit funding. Provides funds for the Bridge Replacement and Rehabilitation Program, Scenic Byways Program, pedestrian and bicycle facilities (such as pedestrian bridges), and designation of high-speed rail corridors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Title                                                                                                                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Landownership Adjustments<br>(36 CFR § 254)                                                                                                      | Sets procedures for conducting exchanges of National Forest System lands and requires consideration of the public interest, including protection of fish and wildlife habitats, cultural resources, watersheds, and wilderness and aesthetic values, as well as enhancement of recreation opportunities and public access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Magnuson-Stevens Fishery Conservation and Management Act of 1976<br>(16 USC §§ 1801-1882)                                                        | Requires conservation and management of U.S. fishery resources through implementation of fishery management plans and Regional Fishery Management Councils. Fishery management plans enable stakeholders to participate in the administration of fisheries, consider social and economic needs of states, develop underutilized fisheries, and protect essential fish habitats.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Marine Mammal Protection Act of 1972 (MMPA)<br>16 USC § 1361 et seq.                                                                             | Prohibits the taking of marine mammals and enacts moratoriums on imports, exports, and sales of marine mammals and marine mammal parts or products within the United States. Defines “take” as “the act of hunting, killing, capture, and/or harassment of any marine mammal; or, the attempt at such.” Defines “harassment” as “any act of pursuit, torment or annoyance” that has potential to injure or disturb a marine mammal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Marine Protection, Research, and Sanctuaries Act of 1972<br>(33 USC §§ 1401-1445)                                                                | Establishes the marine sanctuaries program and provides a permitting process for the dumping of materials, including dredged materials, into U.S. ocean water.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Migratory Bird Treaty Act (MBTA)<br>(16 USC §§ 703-712)                                                                                          | Regulates the taking, possession, import, export, transport, sale, purchase, barter, or offer for sale, purchase, or barter, of any migratory bird, or the parts, nests, or eggs of such a bird except under the terms of a valid permit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| National Environmental Policy Act (NEPA) (42 USC § 4321 et seq.)                                                                                 | Requires federal agencies to integrate environmental values into their decision-making processes by considering the environmental impacts of their Proposed Actions and reasonable alternatives to those actions. Established CEQ; CEQ promulgated regulations implementing NEPA, which are binding on all federal agencies, to address the procedural provisions of NEPA and the administration of the NEPA process, including preparation of Environmental Impact Statements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| National Forest Management Act of 1976<br>(Pub. L. No. 94-588)<br>National Forest System Land and Resource Management Planning<br>(36 CFR § 219) | Governs the administration of national forests and removal of trees. Includes requirements for consideration, treatment, and protection of intangible resources such as scenery and aesthetics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| National Historic Preservation Act (NHPA)<br>(formerly 16 USC § 470 et seq., now 54 USC § 100101 et seq.)                                        | Ensures protection of cultural resources and historic properties. Established the Advisory Council on Historic Preservation (ACHP) to promote the preservation, enhancement, and productive use of our nation’s historic resources. Authorizes the Secretary of the Interior to maintain a National Register of Historic Places composed of districts, sites, buildings, structures, and objects significant in American history and culture. Section 106 of the NHPA requires federal agencies to identify the effects of proposed actions on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register. Under Section 106, the NHPA requires that federal agencies consult with federally-recognized Indian tribes and Native Hawaiian Organizations that attach traditional religious and cultural significance to eligible or listed historic properties that may be affected by the agency’s actions. |

| Title                                                                                                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| National Marine Sanctuaries Act<br>(16 USC § 1431 <i>et seq.</i> )                                                        | Authorizes the Secretary of Commerce to designate national marine sanctuaries based on statutory criteria and specifies consultation requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| National Trails System Act of 1968<br>(16 USC § 1241)                                                                     | Authorizes the Secretary of Agriculture to administer and manage national scenic trails for conservation and enjoyment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Native American Graves Protection and Repatriation Act (NAGPRA)<br>(Pub. L. No. 101-601; 104 Stat. 3048)                  | Establishes a process for museums and federal agencies to manage certain Native American cultural items in their possession or inadvertently discovered during a project; establishes the rights of Native American lineal descendants, American Indian tribes, and Native Hawaiian organizations with respect to the treatment, repatriation, and disposition of Native American human remains, funerary objects, sacred objects, and objects of cultural patrimony (referred to collectively in the statute as cultural items), with which they can show a relationship of lineal descent or cultural affiliation. |
| North American Wetlands Conservation Act of 1989<br>(Pub. L. No. 101-233)                                                 | Recognizes the aesthetic values of fish, shellfish, and other wildlife, and recognizes that wetlands provide aquatic areas important for recreational and aesthetic purposes. Federal agencies (to the extent possible) should cooperate to restore, protect, and enhance wetlands and other habitats for migratory birds, fish, and wildlife.                                                                                                                                                                                                                                                                       |
| Occupational Safety and Health Act (OSHA) of 1970<br>(Pub. L. No. 91-596)                                                 | Mandates that employers provide a safe place of employment to assure safe and healthful working conditions for working men and women by setting and enforcing standards and by providing training, outreach, education, and assistance.                                                                                                                                                                                                                                                                                                                                                                              |
| Plant Protection Act<br>(7 USC § 7701 <i>et seq.</i> )                                                                    | Establishes a program to control the spread of noxious weeds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Procedures for Abatement of Highway Traffic Noise and Construction Noise<br>(23 CFR § 772)                                | Establishes procedures for conducting noise studies and implementing noise abatement measures, and provides guidelines to plan and design highway projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Resource Conservation and Recovery Act (RCRA) of 1976<br>(40 CFR §§ 239-282)                                              | Amends the Solid Waste Disposal Act of 1965 to address how to safely manage and dispose of municipal and industrial waste generated nationwide. Identifies more stringent hazardous waste management standards, and a comprehensive regulatory program for underground storage tanks that store petroleum or certain hazardous materials.                                                                                                                                                                                                                                                                            |
| Rivers and Harbors Act of 1899<br>(33 USC § 403)                                                                          | Addresses projects and activities in navigable waters and harbor and river improvements and prohibits the unauthorized obstruction or alteration of any navigable water of the United States, including altering any port, harbor, or channel.                                                                                                                                                                                                                                                                                                                                                                       |
| Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU)<br>(Pub. L. No. 109-59) | Addresses maintenance and growth challenges of the U.S. transportation system (e.g., improving safety, reducing traffic congestion, improving efficiency in freight movement, increasing intermodal connectivity, and protecting the environment). Regulates efforts to address national transportation problems and provides state and local decision makers the flexibility to solve transportation problems at the regional and local levels.                                                                                                                                                                     |
| Safe Drinking Water Act<br>(42 USC §§ 300d-300j-9, as amended by Pub. L. No. 93-523)                                      | Protects public health by regulating the nation's public drinking water and its sources, including protection of surface water and groundwater. Section 1424(e) of the Safe Drinking Water Act authorizes the Sole Source Aquifer Protection Program. Sole source aquifers are the sole or principal source of drinking water for an area, defined as providing 50 percent or more an area's drinking water supply. Any federally funded proposed project with the potential to contaminate a designated sole source aquifer is subject to USEPA review.                                                             |

| <b>Title</b>                                                                                                                                       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Superfund Amendments and Reauthorization Act of 1986 (SARA)<br>( <i>Pub. L. No. 99-499</i> )                                                       | Amends the Comprehensive Environmental Response, Compensation, and Liability Act as a result of lessons learned from managing the Superfund program. Stresses the importance of permanent remedies and innovative treatment technologies in cleaning up hazardous waste sites, encourages greater citizen participation in cleanup decisions, and increases the size of the trust fund. |
| Toxic Substances Control Act of 1976 (TSCA)<br>( <i>15 USC § 53</i> )                                                                              | Gives the USEPA the authority to require reporting, record-keeping, and testing relating to toxic chemical substances or mixtures.                                                                                                                                                                                                                                                      |
| Wild and Scenic Rivers Act<br>( <i>16 USC §§ 1271–1287</i> )<br>Wild and Scenic Rivers<br>( <i>36 CFR § 297</i> )                                  | Provides for a Wild and Scenic River System by recognizing the remarkable values (scenic, recreational, geologic, fish and wildlife, historic, cultural, or other values) of specific rivers of the United States. The Wild and Scenic Rivers designation includes requirements for the protection of scenic and natural values from the effects of any water resources project.        |
| Wilderness Act of 1964<br>( <i>16 USC § 1131</i> )                                                                                                 | Provides for the preservation of wilderness character and protects and manages the natural conditions of wilderness areas to negate human impacts.                                                                                                                                                                                                                                      |
| <b>Executive Orders</b>                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                         |
| Executive Order 11988<br>Floodplain Management                                                                                                     | Requires federal agencies to avoid, to the extent possible, the long and short-term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. Aspects of EO 11988 have been updated in EO 13690 (see below).                                        |
| Executive Order 12898<br>Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations                       | Ensures that federal agencies avoid taking actions that have a disproportionately high and adverse impact on low-income populations or minority populations. Emphasizes the importance of NEPA's public participation process and provides minority and low-income communities' access to public information and public participation.                                                  |
| Executive Order 13007<br>Indian Sacred Sites                                                                                                       | Directs federal agencies to accommodate access to and avoid adversely affecting American Indian sacred sites.                                                                                                                                                                                                                                                                           |
| Executive Order 13089<br>Coral Reef Protection                                                                                                     | Directs federal agencies to avoid degradation of coral reef ecosystems and implement measures to restore affected ecosystems.                                                                                                                                                                                                                                                           |
| Executive Order 13112<br>Invasive Species                                                                                                          | Directs federal agencies to prevent the introduction of plant, animal, and microorganism invasive species, and control and minimize the economic, ecologic, and human health impacts that invasive species may cause.                                                                                                                                                                   |
| Executive Order 13175<br>Consultation and Coordination with Indian Tribal Governments                                                              | Reaffirms the federal government's commitment to tribal sovereignty, self-determination, and self-government. Its purpose is to ensure that all executive departments and agencies consult with Indian tribes and respect tribal sovereignty as they develop policy on issues that impact Indian communities.                                                                           |
| Executive Order 13340<br>Great Lakes Interagency Task Force and Promotion of a Regional Collaboration of National Significance for the Great Lakes | Specifies 11 federal agency and Cabinet-level departments to provide strategic direction on federal Great Lakes policies, priorities, and programs.                                                                                                                                                                                                                                     |
| Executive Order 13547<br>Stewardship of the Ocean, Our Coasts, and the Great Lakes                                                                 | Provides national policy to ensure the protection, maintenance, and restoration of the health of ocean, coastal, and Great Lakes ecosystems and resources.                                                                                                                                                                                                                              |

| <b>Title</b>                                                                                                                                          | <b>Description</b>                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Executive Order 13653<br>Preparing the United States for the Impacts of Climate Change                                                                | Directs federal agencies to take steps that will make it easier for American communities to strengthen their resilience to climate change impacts.                                                                                                                                                                                                     |
| Executive Order 13690<br>Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input | Implements the Federal Flood Risk Management Standard as part of a national policy on resilience and risk reduction, consistent with the President's Climate Action Plan. Amends EO 11988 (see above), and emphasizes consideration by agencies of ecosystem-based alternatives and long-term resilience and risk reduction when managing flood risks. |
| Executive Order 13693<br>Planning for Federal Sustainability in the Next Decade                                                                       | Outlines goals for federal agencies related to climate change, energy, water use, vehicle fleets, construction, and acquisition. Establishes targets for greenhouse gas emissions, water use and efficiency, and clean energy use for federal operations by 2025, relative to various baselines (depending on resource reduction or improvement).      |
| <b>Guidance</b>                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                        |
| Council on Environmental Quality Final NEPA Guidance on Consideration of the Effects of Climate Change and Greenhouse Gas Emissions                   | Provides guidance on how to incorporate the environmental effects of greenhouse gas emissions and the relationship of climate change in NEPA documentation.                                                                                                                                                                                            |

**Table 1: Bureau of Land Management Sensitive Plants and Animals in Alaska**

| Scientific Name                         | Common Name                     |
|-----------------------------------------|---------------------------------|
| <b>Birds</b>                            |                                 |
| <i>Gavia adamsii</i>                    | Yellow-billed Loon              |
| <i>Cygnus buccinator</i>                | Trumpeter Swan                  |
| <i>Chen canagica</i>                    | Emperor Goose                   |
| <i>Branta canadensis occidentalis</i>   | Dusky Canada Goose              |
| <i>Aquila chrysaetos</i>                | Golden Eagle                    |
| <i>Numenius tahitiensis</i>             | Bristle-thighed Curlew          |
| <i>Calidris canutus</i>                 | Red Knot                        |
| <i>Calidris pilocnemis tschuktschor</i> | Bering Sea Rock Sandpiper       |
| <i>Brachyramphus brevirostris</i>       | Kittlitz's Murrelet             |
| <i>Brachyramphus marmoratus</i>         | Marbled Murrelet                |
| <i>Asio flammeus</i>                    | Short-eared Owl                 |
| <i>Contopus cooperi</i>                 | Olive-sided Flycatcher          |
| <i>Dendroica striata</i>                | Blackpoll Warbler               |
| <i>Euphagus carolinus</i>               | Rusty Blackbird                 |
| <i>Plectrophenax hyperboreus</i>        | McKay's Bunting                 |
| <b>Mammals</b>                          |                                 |
| <i>Lepus othus</i>                      | Alaskan Hare                    |
| <i>Spermophilus parryi osgoodi</i>      | Osgood's Arctic Ground Squirrel |
| <i>Sorex yukonicus</i>                  | Alaskan Tiny Shrew              |
| <i>Mustela americana kenaiensis</i>     | Kenai Marten                    |
| <b>Fish</b>                             |                                 |
| <i>Lampetra alaskensis</i>              | Alaskan Brook Lamprey           |
| <i>Salvelinus alpinus</i>               | Arctic Char (Kigluaik Mtns)     |
| <b>Insect</b>                           |                                 |
| <i>Acentrella feropagus</i>             | A mayfly                        |
| <i>Rhithrogena ingalik</i>              | Alaska Endemic Mayfly           |
| <i>Alaskaperla ovibovis</i>             | Alaska Sallfly                  |
| <b>Plants</b>                           |                                 |
| <i>Antennaria densifolia</i>            | No common name                  |
| <i>Arnica lonchophylla</i>              | Northern Arnica                 |
| <i>Artemisia globularia ssp. lutea</i>  | No common name                  |
| <i>Artemisia laciniata</i>              | Siberian Wormwood               |
| <i>Artemisia senjavinensis</i>          | Arctic Sage                     |
| <i>Aster pygmaeus (Eurybia pygmaea)</i> | Pygmy Aster                     |
| <i>Botrychium ascendens</i>             | Moonwort                        |
| <i>Carex adelostoma</i>                 | Circumpolar Sedge               |
| <i>Claytonia arctica</i>                | Arctic Springbeauty             |
| <i>Claytonia ogilviensis</i>            | Ogilvie Mts Spring Beauty       |
| <i>Cryptantha shackletteana</i>         | Shacklettes' Catseye            |
| <i>Douglasia alaskana</i>               | Alaska Rock-jasmine             |
| <i>Douglasia arctica</i>                | Mackenzie River Douglasia       |
| <i>Douglasia beringensis</i>            | Arctic Dwarf Primrose           |
| <i>Draba micropetala</i>                | Alpine Whitlow-grass            |
| <i>Draba murrayi</i>                    | Murray's Whitlow-grass          |
| <i>Draba ogilviensis</i>                | No common name                  |
| <i>Draba pauciflora</i>                 | Adam's Whitlow-grass            |
| <i>Erigeron muirii</i>                  | Muir's Fleabane                 |
| <i>Erigeron yukonensis</i>              | No common name                  |
| <i>Eriogonum flavum var. aquilinum</i>  | Yukon Wild-buckwheat            |

| Scientific Name                                 | Common Name               |
|-------------------------------------------------|---------------------------|
| <i>Erysimum asperum</i> var. <i>angustatum</i>  | A wallflower              |
| <i>Gentianopsis detonsa</i> ssp. <i>detonsa</i> | Sheared Gentian           |
| <i>Koeleria asiatica</i>                        | Oriental Junegrass        |
| <i>Lesquerella calderi</i>                      | Calder's Bladderpod       |
| <i>Mertensia drummondii</i>                     | Drummond's Bluebell       |
| <i>Montia bostockii</i>                         | Bostock's Miner's-lettuce |
| <i>Oxytropis arctica</i> var. <i>barnebyana</i> | Barneby's Locoweed        |
| <i>Oxytropis huddelsonii</i>                    | No common name            |
| <i>Oxytropis kobukensis</i>                     | Kobuk Locoweed            |
| <i>Papaver alboroseum</i>                       | Pale Poppy                |
| <i>Papaver gorodkovii</i>                       | No common name            |
| <i>Papaver walpolei</i>                         | Walpole Poppy             |
| <i>Parrya nauruaq</i>                           | No common name            |
| <i>Pedicularis hirsuta</i>                      | No common name            |
| <i>Phacelia mollis</i>                          | Macbride Phacelia         |
| <i>Pleuropogon sabinei</i>                      | Sabine-grass              |
| <i>Poa hartzii</i> ssp. <i>alaskana</i>         | No common name            |
| <i>Poa porsildii</i>                            | No common name            |
| <i>Potentilla stipularis</i>                    | Circumpolar Cinquefoil    |
| <i>Primula tschuktschorum</i>                   | Chukchi Primrose          |
| <i>Puccinellia wrightii</i>                     | No common name            |
| <i>Ranunculus camissonis</i>                    | No common name            |
| <i>Ranunculus glacialis</i> var. <i>1</i>       | No common name            |
| <i>Ranunculus turneri</i>                       | Turner's Butter-cup       |
| <i>Rumex graminifolius</i>                      | No common name            |
| <i>Rumex krausei</i>                            | Cape Krause Sorrel        |
| <i>Smelowskia johnsonii</i>                     | No common name            |
| <i>Smelowskia pyriformis</i>                    | No common name            |
| <i>Trisetum sibiricum</i> ssp. <i>litorale</i>  | Siberian False-oats       |
