## **APPENDIX F**

### **Climate Change Sources and Models**

-Page Intentionally Left Blank-

## **Introduction**

The following sections provide additional background information related to climate change sources and models to supplement what is provided in the climate change sections of the Final Programmatic Environmental Impact Statement.

### **Fifth Assessment Report, International Panel on Climate Change**

The Intergovernmental Panel on Climate Change (IPCC) released its Fifth Assessment Report in 2014. The report analyzes and evaluates global climate change projections and trends and provides regional climate trends and sector-specific climate risks. This assessment introduced new emission scenarios referred to as Representative Concentration Pathways (RCPs) used to evaluate future climate trends. The RCPs are “identified by approximate radiative forcing (cumulative measure of human emissions of greenhouse gases from all sources) in year 2100 relative to year 1750” (*IPCC 2013*). There are four RCPs: one mitigation scenario (RCP2.6), two stabilization scenarios (RCP4.5 and RCP6.0), and one high emission scenario (RCP8.0) (*IPCC 2013*).

### **Third National Climate Assessment, United States Global Change Research Program**

The United States Global Change Research Program (USGCRP) released the third National Climate Assessment in May 2014. The USGCRP is comprised of 13 federal departments and agencies participating in the USGCRP. Downscaled global circulation models were used to create regional models for eight regions covering the contiguous U.S., Alaska, Hawaii, and the Pacific Islands. These agencies conduct research and develop capabilities to support the national response to global change. The National Climate Assessment (NCA) uses RCP scenarios to evaluate climate effects on a national scale. However, regional climate effects presented in the NCA use emission scenarios from the Special Report on Emission Scenarios (SRES) which was first published in 2000 by the IPCC. These emission scenarios were used in the Third and Fourth Assessment Reports by IPCC. The SRES scenarios are based on population and economic growth and cultural responses, as well as technology development (*IPCC 2000*). The four scenarios for future conditions are defined as: high emission cases A1 and A2, and low emission cases B1 and B2. These scenarios are illustrated in Figure 1.

Source: IPCC 2000

Note: The graph illustrates the four families in the SRES. The A1 scenario is characterized by rapid economic growth, global population peaking by 2050 and declines after, introduction to new and more efficient technology, and three alternatives with predominant use of fossil fuel (A1F1), moderate use of fossil fuels (A1B), and predominant use of renewable energy (A1T). The A2 Scenario represents a heterogeneous world with continuously increasing global population and regional economic growth that is slower than other scenarios. The B1 scenario is characterized by global population peaking in 2050 and declines after, and economic structure with a service and information economy including reductions in material intensity and introduction to clean and resource efficient technology. The B2 scenario has an increasing population that is lower than the A2 and intermediate economic development (IPCC 2000). The ranges represent the long-term uncertainties associate with the literature available at the time of preparation of the report.

**Figure 1: Greenhouse Gas Emissions for SRES Storylines**

### **Regional Climate Trends and Scenarios for the U.S. National Climate Assessment: Part 7, Climate of Alaska, and Part 8, Climate of the Pacific Islands, National Oceanic and Atmospheric Administration.**

National Oceanic and Atmospheric Administration created regional climate trends and scenarios reports for each of the eight regions in the NCA, and one for the contiguous U.S. The eight regions in the NCA are Northeast, Southeast and the Caribbean, Midwest, Great Plains, Northwest, Southwest, Alaska, and Hawaii/Pacific Islands.

Climate change trends presented in this Final Programmatic Environmental Impact Statement were sourced from *Regional Climate Trends and Scenarios for the U.S. National Climate Assessment Part 7, Climate of Alaska* (Stewart et al. 2013), and *Part 8, Climate of the Pacific Islands* (Keener et al. 2013). The analysis used 15 coupled atmosphere–ocean general circulation models from the World Climate Research Program’s Coupled Model Intercomparison Project phase 3 (CMIP3) multi-model data set. These models have a grid resolution of approximately 100 to 200 miles (Stewart et al. 2013). Additionally downscaled CMIP3 models for temperature, precipitation, and growing season lengths at a 2-kilometer resolution for Alaska were used to simulate season temperature, precipitation and sea level pressure (Stewart et al. 2013). Three types of analysis were presented for input into the NCA, which include the following types:

- Multi model mean maps: models are regraded to a common grid with resolution of approximately 190 miles latitude and 60 to 110 miles longitude. Grid points are calculated as the mean of all variable means grid points. Multi mean analysis of future spatial patterns may provide the most robust estimate of future climate change;
- Spatially averaged products: grid points are averaged and represented as a single value; and
- Probability density function: This is used to compare and illustrate the differences between models by calculating spatially averaged values for each model simulation. The output is the frequency distribution of the averaged values (*Stewart et al. 2013*).

**Re: National Telecommunications Information Administration's (NTIA) First Responder Network (FirstNet) Draft Programmatic Environmental Impact Statement (DPEIS) for the Western United States**

Comments to be submitted in their entirety for the Administrative Record.

Submitted by Albert M. Manville, II, Ph.D., C.W.B.

Principal, *Wildlife and Habitat Conservation Solutions, LLC*<sup>1</sup>;  
Adjunct Professor, Krieger School of Arts and Sciences, Advanced Academic Programs, Johns Hopkins University, Washington DC campus; and  
former U.S. Fish and Wildlife Service agency lead on avian-structural impacts — including from collision and radiation impacts to migratory birds from communication towers

September 29, 2016

[FirstNet DPEIS W.U.S. Comments-AMM.docx]

## **Introduction**

I am pleased to provide comments regarding FirstNet's DPEIS for the Western United States. Please consider my comments regarding this DPEIS for the Western United States as representative of national and continental needs and concerns regarding both wildlife and the impacts from communication towers and their radiation. My comments and recommendations are focused on new wireless communication towers which FirstNet will contract to be built and make operational.

## **Overview of my Assessment**

1. Below I provide more details not discussed in Chapter 2 about migratory birds, their status and importance.
2. I recommend — based on DPEIS Chapter 9, Best Management Practices (BMPs) — even stronger selection criteria for new towers, purposely avoiding — as practical and feasible — tower siting and operation in heavily human developed areas and wildlife concentration areas, especially for migratory birds.
3. I make a strong evidentiary case— in reviewing DPEIS Chapter 2 — based on the most recent peer-reviewed scientific literature and professional contacts, that the effects on non-thermal radiation must be included in FirstNet's National Environmental Policy Act (NEPA) review, based on a 2014 agreement with the Department of Interior. Furthermore, I argue that, "*the potential effects of major concern are rare...*" (p. 2-12) is an inaccurate conclusion based on the preponderance of recent new evidence and cumulative database effects.
4. I will show that independent studies from radiation effects should be supported by FirstNet to develop consistent, standardized, agreed-upon radiation metrics, based on peer-reviewed monitoring and testing research protocols. While arguably we have, "*no consistent measures of exposure...*" (p. 2-12), FirstNet has an opportunity to lead in establishing them.
5. I will show that independent scientific research supported by FirstNet could help develop and set exposure guidelines for radio frequency radiation (RFR) effects on wildlife, especially migratory birds, as well as on humans. I assert that the statement, "[we have] *no scientifically agreed upon biological mechanism of harm...*" (p. 2-12) is an incorrect one based on the current scientific evidence, and further that the communications industry continues to spend enormous amounts of money fighting current biological conclusions and recommendations.

---

## Qualifications

My expertise in wildlife, including migratory birds, and impacts from radiation is extensive. I earned a B.S. in zoology from Allegheny College, an M.S. in natural resources and wildlife management from the University of Wisconsin, Stevens Point, and a Ph.D. from Michigan State University in wildlife ecology and management. More recently, I was designated as a “Certified Wildlife Biologist” (C.W.B.) by The Wildlife Society. During my military service, I was trained by the U.S. Navy in the use of electronic gear, then trained and certified by the Departments of State and Defense as a Mandarin Chinese linguist prior to working for the National Security Agency during my Navy tour of duty. I worked as a Federal wildlife biologist for 17 years, retiring in June 2014 from my position as a Senior Wildlife Biologist with the Division of Migratory Bird Management, U.S. Fish and Wildlife Service (FWS or Service), Headquarters Office, Arlington, VA. I was the Service’s national lead on issues related to anthropogenic causes of bird injury and mortality, including from communication towers. In that capacity, I chaired the Communication Tower Working Group (looking at both avian-tower collisions and avian-radiation impacts), working closely with the Federal Communications Commission (FCC), Federal Aviation Administration, other Federal agencies, all the large tower and cell phone trade associations, several cell phone and tower companies, scientists, academicians, and consultants. I was the FWS project officer for the cutting edge tower lighting study at Michigan State Police communication towers (Gehring et al. 2009, Gehring et al. 2011), served as the project officer for a U.S. Coast Guard tall communication tower study, developed a cell tower research monitoring protocol for the U.S. Forest Service (Manville 2002), crafted a peer-reviewed cell tower radiation monitoring protocol, and represented FWS as lead reviewer on many communication tower projects from cell towers to tall, digital television towers. I have published more than 175 professional and popular papers, chapters (including my current chapter in *Problematic Wildlife: a Cross-Disciplinary Approach*; Springer Publishing, 2016), and book reviews. I was considered my agency’s lead, go-to person on communication tower impacts to migratory birds and continue to work in consulting and teaching capacities on these issues.

## Previous Agreement

On February 4, 2014, the Director of the Office of Environmental Policy and Compliance (OEPC), Department of Interior (DOI), sent a letter to the U.S. Commerce Department’s NTIA suggesting regulatory compliance by its FirstNet, a newly created federal entity, implementing development of emergency broadcast systems nationwide (USDOJ 2014). Included in those recommendations were inadequacies which FirstNet had acknowledged and was then proceeding to address. These included inadequacies for conserving migratory birds in Enclosure A of the OEPC letter which I authored while working for the Division of Migratory Bird Management, USFWS. In it, I provided recommendations for addressing bird injury, crippling loss, and death from communication tower collisions; and research needs for beginning to address impacts from non-ionizing electromagnetic radiation emitted from such towers.

The take-home message was clear. We had a federal agency (FirstNet) willing to recognize and begin addressing the impacts of radiation on migratory birds — a significant and important step forward. On February 27, 2014, I began communicating with FirstNet’s Director of Environmental Compliance regarding their PEIS, including beginning to address impacts from low-level, non-thermal non-ionizing radiation that FirstNet stated they then did not intend to categorically exclude. We met with FirstNet’s Director of Environmental Compliance and her staff on March 20, 2014, and proceeded to help FirstNet further develop their DPEIS.

FCC standards dealing with tower radiation are flawed and continue to be based solely on thermal heating, now more than 30 years out of date. FCC, to date, has been unwilling to update their radiation regulatory standards while, to their credit, they are updating tower lighting, height and guy-wire standards. Significantly lower radiation output does not equate to reduced risk (e.g., Panagopoulos and Margaritis (2008)).

I hope FirstNet officials will evaluate their current position based on the recommendations that follow.

### **Background**

Recapping, the electromagnetic radiation standards used by the FCC continue to be based on thermal heating, a criterion now more than 30 years out of date and inapplicable today — except when one is very close to a base station antenna where thermal radiation is at issue. For example, for health and safety reasons, the FCC requires that power to cell and other communication towers must be turned off during maintenance by tower workers.

The current electromagnetic radiation issues are primarily due to the lower levels of radiation output from microwave-powered communication devices such as cellular telephones and their cell towers, emergency broadcast antennas, Wi-Fi, so called “smart meters,” and other sources of point-to-point communications; levels typically lower than from microwave ovens. The FCC’s radiation standards are currently being legally challenged at cell towers in the U.S. Migratory birds are impacted by these tower structures and their broadcasting/receiving radiation, including by very low levels of non-thermal radiation.

### **Why Are Migratory Birds Important?**

Migratory birds — i.e., those that migrate across U.S., Canadian and/or Mexican borders, of which 1,027 species are currently protected in the United States (50 C.F.R. 10.13 list), are a public trust resource, meaning they belong to everyone. Most birds in the western United States are migratory as they are elsewhere in the U.S. Almost all North American continental birds are protected by the Migratory Bird Treaty Act (MBTA). The Act implements and regulates bilateral protocols with Canada, Mexico, Japan and Russia. It is a strict liability statute; proof of criminal intent in the injury or killing of birds is not required by enforcement authorities for cases to be made.

The statute and its regulations protect migratory birds, their parts, eggs, feathers and nests from un-permitted possession and “take” (i.e., un-permitted injury, crippling loss, or killing). Migratory bird nests are protected during the breeding season while eagle nests are protected year-round. Efforts are currently underway by FWS to develop a permit where un-permitted and “unintentional take” could be allowed under MBTA; that process began in 2001. A Federal permit is required to possess a migratory bird and its parts, but the MBTA currently provides no provision for the accidental or incidental “take” (causing injury, crippling loss, or death — including from tower collisions and from radiation) of a protected migratory bird, even when otherwise normal, legal business practices or personal activities are involved, such as the construction and operation of the FirstNet emergency broadcast system. The U.S. Congress noted the “take” of even one protected migratory bird to be a violation of the Statute, with fines and criminal penalties that can be extensive. Under the purview of the MBTA and Executive Order 13186 (the Migratory Bird EO), agencies such as FirstNet need to make every effort to “avoid and minimize take” of migratory birds. You already reference in Chapter 9 of this DPEIS the FWS 2013 voluntary communication tower guidelines which I updated, authored and provided to FCC (Manville 2013b), in addition to other BMPs such as the Avian Power Line Interaction Committee guidelines (APLIC 2006, 2012), both which I co-authored.

Bald and Golden Eagles are also protected by the Bald and Golden Eagle Protection Act (BGEPA), another strict liability statute. “Take” under BGEPA is more expansive than under MBTA, and includes pursuit, shooting, poisoning, capturing, killing, trapping, collecting, molesting and disturbing both species (50 C.F.R. 22.3). It is important to note that eagles do not simply need to be killed or injured to be in violation of the Eagle Act. “Disturbance take” could result in reduced survivorship of adults, juveniles and chicks, affecting their population viability, including from the construction and operation of FirstNet towers. These “takes” are potential criminal offenses.

#### *Status of Migratory Birds:*

Migratory birds are in trouble, including impacts from individual structures and the cumulative communication tower network continent-wide. There are growing numbers of Birds of Conservation Concern (BCCs; USFWS 2008) — species in decline but not yet ready for federal listing as threatened or endangered under the Endangered Species Act (ESA), although some are under listing review. Currently there are 273 species (out of 1,027 protected birds) and subspecies on the national BCC, Service Regional BCC and Bird Conservation Region BCC lists, providing an early warning of likely peril unless the population trends are reversed.

Additionally, there are 93 endangered and threatened bird species on the ESA List of Threatened and Endangered Species. Collectively, BCC and ESA-listed birds represent at least 366 bird species (36%) in decline — some seriously — with numbers of both listed and BCC species growing (Manville 2013a). The FWS is also tasked to maintain stable or increasing breeding populations of Bald and Golden Eagles under implementing regulations of BGEPA and compliance with NEPA — including for broadcast towers.

#### *Bird Collisions:*

Migratory birds have been documented killed in single night, mass mortality collision events (up to 10,000 in single night, single tower collision events) with communication towers, guy-support wires, and tower lights in the U. S. since 1948 — Aronoff 1949, summarized in Manville 2007 — including at unguyed, unlit, < 200-ft above-ground-level (AGL) cell towers.

During nighttime migrations, birds can be overwhelmed by inclement weather events, forcing bird fall-out, significant reductions in flight heights, and resultant attraction to lighted structures and confusion (Manville 2014, 2016a) — such as security lighting that may be placed at power sheds, attracting birds, causing them to collide with the towers. Currently an estimated 6.8 million birds/yr are killed in the U.S. and Canada (Longcore et al. 2012). The vast majority of these bird deaths are in the U.S. In another review, at least 13 species of BCCs were estimated to suffer annual mortality of 1-9% of their estimated total population based solely on communication tower collisions in the U.S. or Canada (Longcore et al. 2013). These include estimated annual mortality of > 2% for the Yellow Rail, Swainson’s Warbler, Pied-bill Grebe, Bay-breasted Warbler, Golden-winged Warbler, Worm-eating Warbler, Prairie Warbler, and Ovenbird.

Up to 350 species of birds have been documented killed at communication towers (Manville 2014, 2016a). Each time one of these birds is killed at an individual communication tower such as that planned by FirstNet, these “takings” add to the overall impacts to bird populations not unlike the phenomenon of the “death by a thousand cuts.” That, of course, is a important purpose of your DPEIS — investigate cumulative effects.

#### *Radiation:*

While there is a massive and growing global database — studies being published weekly — on effects of tower and other non-ionizing radiation on wildlife, laboratory animals and humans, and it is important to

note that the impacts from both thermal and non-thermal radiation have already been well documented (e.g., [www.saferemr.com](http://www.saferemr.com)). In fact, most scientists consider non-thermal effects as well established even though all of the implications are not yet fully understood. Thermal effects are generally pretty clear. It is also important to note that tests on laboratory animals referenced in a radiation memo I provided to FCC in early 2016, and updated for release to the public on July 14, 2016 (excerpted herein; Manville 2016b; <http://bit.ly/savewildlifeRFR>), such as those on chicken embryos, mice and rats are used as surrogates to predict harm to humans, protected migratory birds and other wildlife. For practical, ethical and legal reasons, wild migratory birds would not otherwise be subjected to laboratory studies on impacts from radiation. Furthermore, scientists generally do not want to perform harmful experiments on either humans or protected wildlife such as migratory birds. Studies on the negative effects of non-thermal radiation to wild birds in Europe, briefly summarized below, are clearly relevant as predictors of what will, is likely, or is happening to wild birds in North America. These issues therefore need to be examined in detail by FirstNet, not categorically excluded as currently done in FCC's flawed approach.

In the June 2016 *Scientific American Blog* (Portier and Leonard 2016), in response to the question, “do cell phones cause cancer?” The authors response was clear: “*probably, but it’s complicated. The degree of risk almost certainly depends on the length and strength of exposure — but we still don’t know how significant the actual danger is.*” These same issues pertain to impacts to wildlife from both thermal and non-thermal effects emitted from cell and broadcast communication towers and FM antennas. I submit that the radiation effects on wildlife need to be addressed by the FCC, the Environmental Protection Agency (EPA), FirstNet, the FWS and other governmental entities.

While radiation studies have been ongoing for decades, not until recently have the effects of low-level, non-thermal electromagnetic radiation on domestic and wild birds been made public. Laboratory studies by T. Litovitz (2000 pers. comm.) and DiCarlo et al. (2002) from the standard 915 MHz cell phone frequency on domestic chicken embryos showed that radiation from extremely low levels (0.0001 the level emitted by the average digital cell phone) caused heart attacks and deaths in some embryos; controls were unaffected (DiCarlo et al. 2002). You already referenced these studies in your DPEIS. However, the effects of microwave (and other) radiation from communication towers on nesting and roosting wild birds are yet unstudied in the U.S. In Europe, impacts have been well documented. Balmori (2005) found strong negative correlations between levels of tower-emitted microwave radiation and bird breeding, nesting, and roosting in the vicinity of electromagnetic fields in Spain. He documented nest and site abandonment, plumage deterioration, locomotion problems, and death in House Sparrows, White Storks, Rock Doves, Magpies, Collared Doves, and other species. While these species had historically been documented to roost and nest in these areas, Balmori (2005) did not observe these symptoms prior to construction of the cellular phone towers.

In a troubling discovery, Balmori (2005) documented “far-field,” low level radiation exposures affecting migratory birds out to 300 meters (nearly 1,000 ft) distance from cell towers in Europe. Twelve nests (40% of his study sample) were located within 200 m (nearly 660 ft) of the antennas and never successfully raised any chicks, while only 1 (3.3%), located further than 300 m, never had chicks. Strange behaviors were observed at White Stork nesting sites within 100 m (328 ft) of one or several cell tower antennas. Those birds that the main beam impacted directly (i.e., electric field intensity/EFI > 2 V/m) included young that died from unknown causes. Within 100 m, paired adults frequently fought over nest construction sticks and failed to advance the construction of the nests with sticks falling to the ground while nests were being constructed. Balmori (2005) reported that some nests were never completed and the Storks remained passively in front of cellsite antennas. The electric field intensity was higher on nests within 200 m ( $2.36 \pm 0.82$  V/m) than on nests further than 300 m ( $0.53 \pm 0.82$  V/m). However, the EMF levels, including for nests < 100 m from the antennas, were not intense enough to be classified as thermally active. Power densities need to be at least 10 mW/cm<sup>2</sup> to produce tissue heating of even 0.5 C (Bern-

hardt 1992). The radio frequencies used in Europe and here in the U.S. are similar to the 700 MHz frequency band FirstNet is planning to utilize.

Balmori and Hallberg (2007) and Everaert and Bauwens (2007) found similar strong negative correlations among male House Sparrows. In another review, Balmori (2009) reported health effects to birds which were continuously irradiated. They suffered long-term effects including reduced territorial defense posturing, deterioration of bird health, problems with reproduction, and reduction of useful territories due to habitat deterioration.

Beason and Semm (2002) demonstrated that microwave radiation used in cell phones produces non-thermal responses in several types of neurons of the nervous system of Zebra Finches. The brain neurons of anesthetized birds were tested with a 900 MHz carrier, modulated at 217 Hz. Stimulation resulted in changes in the amount of neural activity by more than half of the brain cells with most (76%) of the responding cells increasing their rates of firing by an average 3.5-fold as opposed to controls — a clearly definitive study showing non-thermal effects. The other responding cells exhibited a decrease in their rates of spontaneous activity suggesting potential effects to humans using hand-held cell phones affecting sleep (Borbely et al. 1999). The Beason and Semm (2002) theoretical model could also help explain why birds may be attracted to cell towers, an important theoretical premise that they previously hypothesized in regard to Bobolinks (Semm and Beason 1990).

Radiation effects can be characterized as “*near-field*” (near the source of radiation), “*far-field*” (some distance from the source) or “*intermediate*.” The growing evidence is clear; there are low-level, non-thermal effects (Manville 2016b: p.4; <http://bit.ly/savewildlifeRFR>). In a meta-review of studies through 2008, and based on laboratory research they conducted, Panagopoulos and Margaritis (2008) determined maximum radiation distances for both cell phones and for communication towers, based on the Global System for Mobile Telecommunications (GSM) and the Digital Cellular System (DCS). This maximum radiation distance corresponds to an intensity around 10 mW/cm<sup>2</sup> for both types of radiation in regards to the RF components — i.e., Bernhardt’s (1992) threshold for thermal heating effects. In the Panagopoulos and Margaritis (2008) study, a “near-field” thermal effect which they called an “*intensity window*” appeared at a distance of 20-30 cm for the cell phone antenna, corresponding to a distance of 20-30 meters (66 to 98 feet) from the base antenna. This could be considered a classic nonlinear effect and would also apply to far field exposures where effects from an “intensity window” are greater than expected. Since cell phone base station antennas are frequently located within residential areas where houses and workplaces are often situated at distances 20-30 m from such antennas, not to mention birds nesting and roosting close to these antennas (e.g., Balmori 2005), humans, migratory birds and other wildlife may be exposed up to 24 hours per day. As a recommended mitigation measure, FirstNet should avoid siting any new broadcast antennas in close proximity to human development and in areas prone to heavy migratory bird use — where there are practical and reasonable alternatives. The FWS’s 2013 guidelines (Manville 2013b), referenced within the DPEIS, provide some recommendations of where to locate antennas.

Complicating the issue is the fact that there currently are no standards for wildlife exposure, including by the licensing and regulatory rules and procedures of the FCC. Other than the letter to and “agreement” between DOI and FirstNet, neither DOI nor the FWS have any policy or quasi policy that currently addresses radiation effects on migratory birds — with the exception of the 2013 (Manville 2013: p.2) guideline number 5. recommending at least a 1-mile disturbance-free buffer between new cell towers and nesting Bald Eagles and Ferruginous Hawks. Arguably, “effects” need to be determined by the EPA, which has no funding for this, and regulated as part of a NEPA site review process, including both thermal and non-thermal effects.

There is an increasing body of published laboratory research that finds DNA damage at low intensity exposures — well below levels of thermal heating — which may be comparable to far field exposures from cell and broadcast antennas, including those being constructed or to be used by FirstNet. This body of

work would apply to all species, including migratory birds, since DNA is DNA, whether single-strand or double helix. The first study to find such effects was conducted by H. Lai and N.P. Singh in 1995 (Lai and Singh 1995). Their work has since been replicated (e.g., Lai and Singh 1996, as well as in hundreds of other more recent published studies), performed in at least 14 laboratories worldwide. The take-home message is clear: low level transmission of EMF from cell and other broadcast towers and other sources probably causes DNA damage. The laboratory research findings strongly infer this relationship. Since DNA is the primary building block and genetic “map” for the very growth, production, replication and survival of all living organisms, deleterious effects can be critical.

The entire thermal model and all FCC categorical exclusions for all of the electronic devices we see today, rests on the incorrect assumption that low-level, non-ionizing non-thermal radiation cannot cause DNA breaks because it is “*so low-power*” (B. Levitt and H. Lai, Comments Filed Jointly to FCC, ET Docket No. 13-84, 2013). The evidence strongly supports the opposite conclusion: low power produces negative effects. These issues need to be adequately addressed by the appropriate authorities including the FCC, EPA, FWS, and FirstNet. Currently they are not.

Based on their research and meta-analyses, Panagopoulos and Margaritis (2008) concluded that large decreases in reproductive capacity were being caused by GSM and DCS radiation fields. This included extensive DNA fragmentation on reproductive cells of experimental animals induced by these fields, exerting an intense biological action able to kill cells, damage DNA, and dramatically decrease the reproductive capacity of living organisms, including populations of wild birds and insects. They cautioned, however, that the physical parameters of these radiations, including intensity, carrier frequency, pulse repetition frequency, distance from the antenna, and similar factors provided inconsistency and lack of standardization making it difficult to correlate specific thermal and non-thermal effects to specific types of radiation. Their take-away message, however, was clear: bio-effects to migratory birds, other wildlife, insects, laboratory animals and humans continue to be documented from thermal and non-thermal exposures, as well as effects from intermediate exposures between the near-field and far-field levels. All migratory birds are potentially at risk, whether they be Bald Eagles, Golden Eagles, Birds of Conservation Concern (USFWS 2008), Federally and/or State-listed bird species, other birds in peril regionally or population-wide, or birds whose populations are stable. FirstNet must therefore address these issues in the DPEIS and your subsequent implementing instructions. Ignoring non-thermal effects based on flawed FCC standards would not be acceptable.

Cucurachi et al. (2013) reported on 113 studies from original peer-reviewed publications and relevant existing reviews. A limited number of ecological studies was identified, the majority of which were conducted in a laboratory setting on bird embryos or eggs, small rodents and plants. In 65% of the studies, ecological effects of RF-EMF (50% of the animal studies and about 75% of the plant studies) were found both at high as well as at low dosages. Lack of standardization and limited sampling made generalizing results from the organism to the ecosystem level very difficult. Cucurachi et al. (2013) concluded, however, that due to the number of variables, no clear dose–effect relationship could be found especially for non-thermal effects. However, effects from some of the studies reviewed were well documented, and certainly can serve as predictors for effects to wild, protected migratory birds and other wildlife in North America.

Engels et al. (2014) investigated “*electromagnetic noise*” emitted everywhere humans use electronic devices including from cell phones and their towers. While prior to their study on European Robins, no “*noise effect*” had been widely accepted as scientifically proven, the authors in this double-blind experiment were able to show that migratory birds are unable to use their magnetic compass in the presence of urban electromagnetic noise. The magnetic compass is integral to bird movement and migration. The findings clearly demonstrated a non-thermal effect on European Robins and clearly serves as a predictor for effects to other migratory birds including those in North America.

Levitt and Lai (2010) reported numerous biological effects from cell tower radiation documented at very low intensities comparable to what the population experiences within 60- 150 m (197- 492 ft) distance from a cell tower, including effects that occurred in studies of cell cultures and animals after exposures to low-intensity RFR. These reported effects were genetic, growth, and reproductive in nature; they documented increases in permeability of the blood–brain barrier; showed behavioral responses; illustrated molecular, cellular, and metabolic changes; and provided evidence of increases in cancer risk — all applicable to migratory birds, other wildlife and to far field exposures in general. They cited published, peer-reviewed examples of effects that included:

Dutta et al. (1989) who reported an increase in calcium efflux in human neuroblastoma cells after exposure to RFR at 0.005 W/kg. Calcium is an important component in normal cellular functions.

Fesenko et al. (1999) who reported a change in immunological functions in mice after exposure to RFR at a power density of 0.001 mW/cm<sup>2</sup>. These results can serve as predictors for impacts to wild animals.

Magras and Xenos (1997) who reported a decrease in reproductive function in mice exposed to RFR at power densities of 0.000168— 0.001053 mW/cm<sup>2</sup>. The results also serve as predictors for reproductive impacts to wildlife.

Forgacs et al. (2006) who reported an increase in serum testosterone levels in rats exposed to GSM-like RFR at specific absorption rates (SAR) of 0.018— 0.025 W/kg. The results also serve as predictors for reproductive impacts to wildlife.

Persson et al. (1997) who reported an increase in the permeability of the blood–brain barrier in mice exposed to RFR at 0.0004– 0.008 W/kg. The blood–brain barrier is a physiological mechanism that protects the brain from toxic substances, bacteria, and viruses. These findings have clear applicability to wildlife including migratory birds.

Phillips et al. (1998) who reported DNA damage in cells exposed to RFR at the SAR of 0.0024– 0.024 W/kg. DNA is integral to the very function and survival of all living organisms, including migratory birds.

Kesari and Behari (2009) also reported an increase in DNA strand breaks in brain cells of rats after exposure to RFR at the SAR of 0.0008 W/kg. The results also serve as predictors for impacts to DNA in wildlife. And,

Belyayev et al. (2009) who reported changes in DNA repair mechanisms after RFR exposure at a SAR of 0.0037 W/kg. DNA is integral to the maintenance and repair of cells and cellular function in all animals. All sources from above were cited in Levitt and Lai (2010).

In a 2-year study conducted by the National Toxicology Program (NTP) of the National Institutes of Health (May 2016), NTP (Wyde 2016) reported partial findings from their \$25 million study on cancer risk to laboratory rodents from cellphone radiation. The report summarizes a long-term exposure study to cell phone radiation, with statistically significant evidence of DNA damage from non-thermal exposure to cellphone radiation to laboratory mice and rats. Controlled studies on laboratory rats showed that cellphone radiation caused 2 types of tumors, glioma and schwannoma, the results which “*could have broad implications for public health.*” The report has been characterized as a “*game-changer*” as it proves that non-ionizing, radiofrequency radiation can cause cancer without heating tissue. The researchers controlled the temperature of the test animals to prevent heating effects so the cancers were caused by a non-thermal mechanism. The report on the mice component of the study will be released at a later date. Not

surprisingly, much of the media coverage contained considerable bias or “media spin” intended to create doubt about the study’s important findings regarding cancer risk from exposure to cellphone radiation (Moskowitz 2016). The implications are troubling for migratory birds and other wildlife.

## Summary Recommendations

Levitt and Lai (2010) concluded that the obvious mechanism of effects from RFR are thermal (i.e., tissue heating) — which is what FCC bases its current radiation standards on, even if they are more than 30 years out of date and rejected both by the Department of Interior and Department of Commerce (USDOJ 2014, Manville 2016a) as incomplete. However, for decades, there have been questions about non-thermal (i.e., not dependent on a change in temperature) effects, whether they exist, and what specifically causes the effects to surface. The sources cited above should help dispel that doubt or at the very least show that non-thermal effects do indeed occur, have been well documented, and can have significant deleterious effects on migratory birds and other wildlife.

Practically, as Levitt and Lai (2010) concluded, we do not actually need to know whether RFR effects are thermal or non-thermal to set exposure guidelines. Most of the biological-effects studies of RFR that have been conducted since the 1980s were under non-thermal conditions, including the most recent NTP (2016) studies. In studies using isolated cells, the ambient temperature during exposure was generally well controlled. In most animal studies, the RFR intensity used usually did not cause a significant increase in body temperature in the test animals. Most scientists consider non-thermal effects as well established, even though the implications are not fully understood.

Scientifically, Levitt and Lai (2010) concluded that there are three rationales for the existence of non-thermal effects:

1. Effects can occur at low intensities when a significant increase in temperature is not likely.
2. Heating does not produce the same effects as RFR exposure.
3. RFR with different modulations and characteristics produce different effects even though they may produce the same pattern of SAR distribution and tissue heating.

There is virtually no non-thermal research to indicate what is safe for either humans or wildlife, including migratory birds which are highly sensitive to perturbations in ways humans are not (see previous citations). Unfortunately, there also is very little far-field, distance-to-safety research for wildlife — most especially for migratory birds — as this has not been studied with that focus in mind. What little EMF/RF field research on wildlife that has been conducted, its focus has been on behavior, mortality and reproductive outcomes (e.g., B. Levitt and H. Lai, Comments Filed Jointly to FCC, ET Docket No. 13-84, 2013; Balmori 2005, 2009; Balmori and Hallberg 2007; Everaert and Bauwens 2007; Engels et al. 2014; Wasserman et al. 1984; and Semm and Beason 1990).

In summary, we need to better understand, tease out, and refine how to address these growing and poorly understood radiation impacts to migratory birds, bees, bats, and myriad other wildlife. Currently, other than to proceed using the precautionary approach and keep emissions as low as reasonably achievable, we are at loggerheads in advancing meaningful guidelines, policies and regulations that address non-thermal effects. The good news: there appears to be an awakening at least within a significant segment the scientific community to the realization that these issues must be addressed — for the health of humans, wildlife and our environment — and hopefully FirstNet will continue on the course of assessing how to minimize the impacts of radiation on wildlife and humans as had been agreed to in 2014.

### Suggested Next Steps for FirstNet

The following suggestions would help significantly advance the need to address effects/impacts from non-thermal radiation on migratory birds and other wildlife, and help in further reducing collision impacts and habitat fragmentation:

- We desperately need to conduct field research on thermal and non-thermal radiation impacts to wild migratory birds and other wildlife here in North America, similar to studies conducted in Europe. Specifically, the research focus should center on causality for “*near-field*,” “*far-field*” and “*intermediate*” effects, ideally based on some standard, agree-upon radiation metrics. FirstNet and leading independent radiation experts (ideally none affiliated with the communication industry) should work together to develop radiation metrics. The metrics need to be consistent with standards for intensity, carrier frequency, pulse repetition frequency, distance from the antenna, and similar factors. The research must be based on peer-reviewed monitoring and testing protocols (e.g., upgrades to the Manville 2002 peer-reviewed research protocol submitted to the U.S. Forest Service for studies on cell towers in Arizona, and key methodologies used in studies previously referenced in the Manville [2016b] memo, among others). The research needs to be conducted by credible, independent third party research entities with no vested interest in the outcomes, and the results need to be published in refereed scientific journals, made available to the public and the affected federal agencies.
- Studies need to be designed to better tease out and understand causality of thermal and non-thermal impacts from radiation on migratory birds. Results need to be carefully compared with findings from Europe and elsewhere on wild birds, and efforts need to be made to begin developing exposure guidelines for migratory birds and other wildlife based on dose-effect and other nonlinear relationships. We do not actually need to know whether RFR effects are thermal or non-thermal to develop and set exposure guidelines (Levitt and Lai 2013).
- To minimize deleterious radiation exposures, these guidelines should include use of avoidance measures such as those developed by the electric utility industry for bird collision and electrocution avoidance (APLIC 2006, 2012). In the case of Bald Eagles, the communication tower guidelines refined and updated by FWS (Manville 2013b) — and submitted to the FCC and industry — recommend one-mile disturbance free buffers during active nesting of Ferruginous Hawks and Bald Eagles, and 0.5-mile buffers around other active raptor nests, based on nest studies conducted by the Wyoming Ecological Services Field Office in that State; Guideline number 5. Impacts must address collision mortality, crippling loss, and injury; mortality, injury, population viability and survivorship based on impacts from radiation; as well as disturbance and habitat fragmentation. The updated 2013 Service Guidelines were intended to be inclusive.
- Agencies tasked with the protection, management, and research on migratory birds and other wildlife (e.g., FWS, U.S. Geological Survey, National Park Service, U.S. Forest Service, Bureau of Land Management, and USDA Wildlife Services, among others) need to develop radiation policies that avoid or minimize impacts to migratory birds and other trust wildlife species. This means supporting — and where applicable — conducting research, and developing policies that help minimize radiation impacts. FirstNet can work with these agencies in support of these efforts.
- As Levitt and Lai (2010) concluded, we do not actually need to know whether RFR effects are thermal or non-thermal to set exposure guidelines. Most scientists consider non-thermal effects as well established, even though the implications are not fully understood.

- Given the rapidly growing database of peer-reviewed, published scientific studies (e.g., <http://www.saferemr.com>, School of Public Health, University of California, Berkeley), it is time these issues be addressed both by FCC and NTIA.
- Without question, these are challenging and daunting issues. FirstNet can begin by taking “small bites out of this 800 pound gorilla” first by developing a siting review process for new towers based on bird- and human-friendly habitats — using the precautionary approach as the direction forward — much like what FWS did following release of its 2000 guidance through a site review process. Proper site location will help to minimize collision and radiation impacts, especially given the scientific information we have available (many sources referenced within these comments). Meanwhile, FirstNet needs to proceed as agreed to in 2014 with helping support independent field radiation research, including in the DPEIS review process, implementing instructions, and through funding and agency support. It is important for FirstNet to begin focusing on new tower siting and location — given the enormity of this endeavor. Implementing the BMPs recommended in this DPEIS and suggestions provided in these comments would be a good start.

Thank you for the opportunity to comment on this complicated but incredibly important issue. Hopefully reasoned minds will prevail, impacts of non-thermal radiation will be included as part of this review, and BMPs will result in a significant reduction of impacts to migratory birds, other wildlife and humans.

Respectfully submitted

Reston, VA 20192

Re: Comments on Draft Programmatic Environmental Impact Statement for the Central Region of the Nationwide Public Safety Broadband Network and Notice of Public Meetings, U.S. Department of Commerce, National Telecommunications and Information Administration, First Responder Network "FirstNet" Authority

Dear Ms. Pereira:

The Department of the Interior (Department) has reviewed the Draft Programmatic Environmental Impact Statement (DPEIS) for the Central Region of the Nationwide Public Safety Broadband Network (NPSBN), i.e., the Proposed Action.

The Proposed Action may impact listed species and migratory birds. Because the DPEIS does not include specific locations or impacts, it is not possible to assess those impacts at this time. The Department recommends that FirstNet consult with the U.S. Fish and Wildlife Service (USFWS) when planning specific clearing and construction projects. The Department offers the following comments from the USFWS Field Offices in Wyoming and Minnesota.

The Proposed Action includes the potential construction of new wireless communication towers and/or modification of existing towers. The placement and operation of towers can affect migratory birds directly through injury, crippling loss, and death from collisions with towers and their supporting guy-wire infrastructure, as well as indirectly through habitat destruction or degradation due to vegetation clearing and tower construction. Additionally, communication towers might have an impact on migratory birds due to non-ionizing electromagnetic radiation emitted by the tower. Please review the February 7, 2014, letter from the Department to Mr. Eli Veenendaal (National Telecommunications and Information Administration) for additional information regarding electromagnetic radiation impacts for the Proposed Action (Enclosure 1).

The DPEIS notes that "If proposed project sites are unable to avoid sensitive areas, best management practices (BMPs) and mitigation measures as defined through consultation with the appropriate resource agency, would be implemented." (Page 29, Executive Summary). The Department supports the DPEIS's BMPs to minimize potential impacts to migratory birds, including:

- *Engage in early consultation with appropriate agencies and stakeholders as necessary, including but not limited to USFWS, NMFS(National Marine Fisheries Service), and other relevant Federal or state agencies;*

- *Follow standards and guidelines outlined by the Avian Power Line Interaction Committee and USFWS (APLIC, 2012) (APLIC and USFWS, 2005) for any aboveground lines or cables (e.g., use of diverters);*
- *Implement seasonal and spatial buffer zones around sensitive areas for deployment and maintenance activities, where possible, as recommended by USFWS and state wildlife and natural resources agencies;*
- *Implement the National Bald Eagle Management Guidelines (USFWS, 2007);*
- *Avoid construction/deployment in areas with sensitive vegetation, unique habitat, or designated natural resources, if practical;*
- *Avoid Important Bird Areas (IBAs) and other known important bird habitats to the maximum extent practicable;*
- *Follow guidelines outlined by USFWS for Communication Tower Design, Siting, Construction, Operation, Retrofitting, and Decommissioning (USFWS, 2013);*
- *Avoid activities within migratory bird flyways and in the immediate vicinity of bat roosts to the extent practicable.*

The Department emphasizes that USFWS Interim Guidelines for Communication Tower Design, Siting, Construction, Operation, Retrofitting, and Decommissioning (USFWS 2013, <https://www.fws.gov/migratorybirds/pdf/management/usfwscommunicationtowerguidance.pdf>) recommend unguyed and unlit towers when practicable to reduce bird collisions, injuries, and mortalities. Recent Department of Transportation (DOT) Federal Aviation Administration (FAA) modifications to obstruction marking and lighting requirements include new configurations that feature flashing lights and which are likely to result in a significant decrease in bird fatalities. (see FAA Advisory Circular, December 4, 2015, [http://www.faa.gov/documentLibrary/media/Advisory\\_Circular/AC\\_70\\_7460-1L\\_.pdf](http://www.faa.gov/documentLibrary/media/Advisory_Circular/AC_70_7460-1L_.pdf)).

With regards to the BMP to “avoid activities within migratory bird flyways” to the extent practicable, the USFWS believes that migrants concentrate along coastlines of major waterbodies such as the oceans and Great Lakes (Bowden et al. 2015), Rathbun et al. 2016, Diehl et al. 2003, Ewert et al. 2011, Peterson et al. 2015, Buler and Dawson 2012, France et al. 2012). The Department would prefer that communication towers be constructed (in order of USFWS preference):

1. More than three miles from any ocean or Great Lake shoreline.
2. If towers are closer than three miles to the shoreline, there should be: site-specific studies and self-standing (un-guyed) towers that are short enough to not require lighting.
3. If towers are closer than three miles to the shoreline and sufficiently tall to require lighting, there should be: site-specific studies; self-standing (un-guyed) towers with lighting that does not include steady-burning lights.

Major north/south river corridors are also major migration corridors and stopover sites. Setback distances from these rivers will depend, to some extent, upon habitat conditions and topography. However, these areas should be avoided to the greatest extent possible. FirstNet should generally follow both the USFWS (2013) Guidelines and those stated above for shorelines.

Under Executive Order (E.O.) 13186, the USFWS is encouraged to “restore and enhance the habitat of migratory birds, as practicable” and “prevent or abate the pollution or detrimental

alteration of the environment for the benefit of migratory birds, as practicable”. The USFWS therefore considers impacts to habitat for migratory birds when providing comments and recommendations under the National Environmental Policy Act (NEPA) environmental review process. The USFWS supports the following DPEIS’s BMPs to minimize vegetation and habitat disturbance and loss:

- *Follow all applicable Federal, state, and local requirements for vegetation removal, disturbance, and restoration;*
- *Avoid construction/deployment in areas with sensitive vegetation, unique habitat, or designated natural resources, if practicable;*
- *Consolidate facilities as much as possible (collocation and use of existing ROWs) to reduce vegetation loss;*
- *Control the spread of invasive plants and animals by inspecting and cleaning equipment and vehicles before moving from one deployment site to another;*
- *Minimize land clearing and vegetation disturbance by using existing roads and unvegetated areas, when feasible, during deployment activities; and*
- *Minimize or avoid removal of forest vegetation whenever possible.*

In accordance with the goals of E.O. 13186 and the Endangered Species Act (ESA), the USFWS recommends that impacts to migratory birds and listed species be mitigated to the greatest extent practicable. The Department uses the NEPA definition of mitigation (<https://ceq.doe.gov/nepa/regs/ceq/1508.htm#1508.20>) which includes avoidance and minimization of impacts, restoring the affected environment, reducing impacts over time, and compensating for impacts by replacing or providing substitute resources or environments.

Additionally, the USFWS recommends conducting vegetation removal and tree clearing outside the breeding period for migratory birds. The USFWS Field Offices can provide state-specific date ranges when clearing should be avoided.

The DPEIS contained only minimal information regarding the location and habitat types expected to be affected within the project area even though vegetation clearing is likely in the development of the network. The USFWS therefore cannot thoroughly review the expected impacts to species listed under ESA (listed species) at this time. Without additional information, it is impossible to accurately assess the project’s potential effects.

The Department disagrees with the statements made in Table ES5-7 of the Executive Summary, and any supporting statements in the DPEIS, that for the broad categories shown the project, “May affect, not likely to adversely affect”. Until specific potential sites and activities are identified, USFWS believes that these conclusions are premature.

The Department recommends that FirstNet consult with USFWS field offices when planning specific clearing and construction projects. The USFWS also recommends visiting the USFWS’s Midwest Region’s Endangered Species Act Section 7 Technical Assistance website (<https://www.fws.gov/midwest/endangered/section7/s7>) regarding impacts in Minnesota, Iowa, Missouri, Wisconsin, Illinois, Indiana, Michigan, and Ohio. Guidance is available at this website to assist you in fulfilling the requirements for consultation under section 7 of the Endangered Species Act, including a step-by-step explanation of the section 7 process, species distribution

lists, species life history information and examples of typical letters. For impacts in Montana, North Dakota, South Dakota, Wyoming, Nebraska, Utah, Colorado, and Kansas, use the USFWS's Mountain-Prairie Region Ecological USFWSs website (<https://www.fws.gov/mountain-prairie/es/index.php>). If, after reviewing the technical assistance websites, it is determined that additional information from a biologist is necessary to assist in the consultation process, please contact the appropriate USFWS field office for the state affected.

The Cheyenne, WY Field Office and Bloomington, IN Field Office of the USFWS have included more detailed comments regarding the DPEIS and impacts of the Proposed Action on listed species and migratory birds in their states (Enclosure 2).

The Department appreciates the opportunity to participate in the environmental review of the Proposed Action. For issues regarding Minnesota, Iowa, Missouri, Wisconsin, Illinois, Indiana, Michigan, and Ohio, Service Field Office contact information can be found at: [https://www.fws.gov/midwest/es/fld\\_off.html](https://www.fws.gov/midwest/es/fld_off.html). For issues regarding Montana, North Dakota, South Dakota, Wyoming, Nebraska, Utah, Colorado, and Kansas, USFWS Field Office contact information can be found by selecting the "Field Offices" tab at <https://www.fws.gov/mountain-prairie/es/index.php>.

Sincerely,

Michaela E. Noble, Director  
Office of Environmental Policy  
and Compliance

## United States Department of the Interior

OFFICE OF THE SECRETARY  
WASHINGTON, D.C. 20240

FEB - 7 2014

In Reply Refer To: (ER 14/0001) (ER 14/0004).

Mr. Eli Veenendaal  
National Telecommunications and Information  
Administration  
U.S. Department of Commerce  
1401 Constitution Avenue, N.W.  
Washington, D.C. 20230

Dear Mr. Veenendaal:

The Department of the Interior (Department) has reviewed the above referenced proposal and submits the following comments and attachment for consideration. Because the First Responder Network Authority (FirstNet) is a newly created entity, we commend the U.S. Department of Commerce for its timely proposals for NEPA implementing procedures.

The Department believes that some of the proposed procedures are not consistent with Executive Order 13186 Responsibilities of Federal Agencies to Protect Migratory Birds, which specifically requires federal agencies to develop and use principles, standards, and practices that will lessen the amount of unintentional take reasonably attributed to agency actions. The Department, through the Fish and Wildlife Service (FWS), finds that the proposals lack provisions necessary to conserve migratory bird resources, including eagles. The proposals also do not reflect current information regarding the effects of communication towers to birds. Our comments are intended to further clarify specific issues and address provisions in the proposals.

The Department recommends revisions to the proposed procedures to better reflect the impacts to resources under our jurisdiction from communication towers. The placement and operation of communication towers, including un-guyed, unlit, monopole or lattice-designed structures, impact protected migratory birds in two significant ways. The first is by injury, crippling loss, and death from collisions with towers and their supporting guy-wire infrastructure, where present. The second significant issue associated with communication towers involves impacts from non-ionizing electromagnetic radiation emitted by them (See Attachment).

In addition to the 147 Birds of Conservation Concern (BCC) species, the FWS has listed an additional 92 species as endangered or threatened under the Endangered Species Act. Together with the bald and golden eagle, this represents 241 species of birds whose populations are in trouble or otherwise merit special protection, according to the varying criteria of these lists. The Department suggests that FirstNet consider preparing a programmatic environmental impact statement (see attachment) to determine and address cumulative impacts from authorizing FirstNet projects on those 241 species for which the incremental impact of tower mortality, when

added to other past, present, and reasonably foreseeable future actions, is most likely significant, given their overall imperiled status. Notwithstanding the proposed implementing procedures, a programmatic NEPA document might be the most effective and efficient method for establishing best management practices for individual projects, reducing the burden to individual applicants, and addressing cumulative impacts.

#### *Categorical Exclusions*

The Department has identified 13 of the proposed categorical exclusions (A-6, A-7, A-8, A-9, A-10, A-11, A-12, A-13, A-14 A-15, A-16, A-17, and A-19) as having the potential to significantly affect wildlife and the biological environment. Given this potential, we want to underscore the importance of our comments on FirstNet's procedural guidance under Environmental Review and Consultation Requirements for NEPA Reviews and its list of extraordinary circumstances in Appendix D.

#### *Environmental Review and Consultation Requirements for NEPA Reviews*

To ensure there are no potentially significant impacts on birds from projects that may otherwise be categorically excluded, the Department recommends including the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act to the list of requirements in this section.

#### *Extraordinary Circumstances*

To avoid potentially significant impacts on birds from projects that may otherwise be categorically excluded, the Department recommends including species covered under the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act to the list of environmentally sensitive resources. Additionally, adding important resources to migratory birds such as sites in the Western Hemisphere Shorebird Reserve Network and Audubon Important Bird Areas to the paragraph on areas having special designation or recognition would help ensure their consideration when contemplating use of a categorical exclusion.

#### *Developing the Purpose and Need*

The Department recommends inclusion of language that would ensure consideration of all other authorities to which NEPA is supplemental as opposed to simply the FirstNet mission. As currently written, the procedures are limited to ensuring the purpose and need considers the FirstNet mission. If strictly applied, this approach would severely limit the range of reasonable alternatives, and likely preclude consideration of more environmentally benign locations or construction practices.

#### *Environmental Review Process, Apply NEPA Early in the Process, Where Action is by Non-Federal Entity*

The Department recommends that FirstNet be required to coordinate with federal agencies having jurisdiction by law or special expertise on construction and lighting of its network of towers.

Thank you for the opportunity to comment on the draft document. If you have any questions concerning the comments, please contact Diana Whittington, NEPA Migratory Bird lead, at (703) 358-2010. If you have any questions regarding Departmental NEPA procedures, contact Lisa Treichel, Office of Environmental Policy and Compliance at (202) 208-7116.

Sincerely,

A handwritten signature in blue ink, appearing to read "Willie R. Taylor". The signature is fluid and cursive, with the first name "Willie" being the most prominent part.

Willie R. Taylor  
Director, Office of Environmental Policy  
and Compliance

## Enclosure A

### Background

The placement and operation of communication towers, including un-guyed, unlit, monopole or lattice-designed structures, impact protected migratory birds in two significant ways.

The first is by injury, crippling loss, and death from collisions with towers and their supporting guy-wire infrastructure, where present. Mass mortality events tend to occur during periods of peak spring and fall songbird migration when inclement weather events coincide with migration, and frequently where lights (either on the towers and/or on adjacent outbuildings) are also present. This situation has been well documented in the U.S. since 1948 in the published literature (Aronoff 1949, see Manville 2007a for a critique). The tallest communication towers tend to be the most problematic (Gehring *et al.* 2011). However, mid-range (~400-ft) towers as proposed by the First Responder Network Authority (FirstNet, a newly created entity under the Department of Commerce) can also significantly impact protected migratory birds, as can un-guyed and unlit lattice and monopole towers (Gehring *et al.* 2009, Manville 2007a, 2009, 2013a). Mass mortalities (more than several hundred birds per night) at unguyed, unlit monopole and lattice towers were documented in fall 2005 and 2011 in the Northeast and North Central U.S. (e.g., Manville 2007a). It has been argued that communication towers including “short” towers do not impact migratory birds, including at the population level (e.g., Arnold and Zink 2011), but recent findings have contradicted that assertion (Manville 2007a, 2013a, Longcore *et al.* 2012, 2013).

The second significant issue associated with communication towers involves impacts from non-ionizing electromagnetic radiation emitted by these structures. Radiation studies at cellular communication towers were begun circa 2000 in Europe and continue today on wild nesting birds. Study results have documented nest and site abandonment, plumage deterioration, locomotion problems, reduced survivorship, and death (e.g., Balmori 2005, Balmori and Hallberg 2007, and Everaert and Bauwens 2007). Nesting migratory birds and their offspring have apparently been affected by the radiation from cellular phone towers in the 900 and 1800 MHz frequency ranges – 915 MHz is the standard cellular phone frequency used in the United States. However, the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today. This is primarily due to the lower levels of radiation output from microwave-powered communication devices such as cellular telephones and other sources of point-to-point communications; levels typically lower than from microwave ovens. The problem, however, appears to focus on very low levels of non-ionizing electromagnetic radiation. For example, in laboratory studies, T. Litovitz (personal communication) and DiCarlo *et al.* (2002) raised concerns about impacts of low-level, non-thermal electromagnetic radiation from the standard 915 MHz cell phone frequency on domestic chicken embryos – with some lethal results (Manville 2009, 2013a). Radiation at extremely low levels (0.0001 the level emitted by the average digital cellular telephone) caused heart attacks and the deaths of some chicken embryos subjected to hypoxic conditions in the laboratory while controls subjected to hypoxia were unaffected (DiCarlo *et al.* 2002). To date, no independent, third-party field studies have been conducted in North America on impacts of tower electromagnetic radiation on migratory birds. With the European field and U.S. laboratory evidence already available,

independent, third-party peer-reviewed studies need to be conducted in the U.S. to begin examining the effects from radiation on migratory birds and other trust species.

## **Discussion**

### ***Collision Deaths and Categorical Exclusions***

Attempts to estimate bird-collision mortality at communication towers in the U.S. resulted in figures of 4-5 million bird deaths per year (Manville 2005, 2009). A meta-review of the published literature now suggests, based on statistically determined parameters, that mortality may be 6.8 million birds per year in Canada and the U.S.; the vast majority in the United States (Longcore *et al.* 2012). Up to 350 species of birds have been killed at communication towers (Manville 2007a, 2009). The Service's Division of Migratory Bird Management has updated its voluntary, 2000 communication tower guidelines to reflect some of the more recent research findings (Manville 2013b). However, the level of estimated mortality alone suggests at a minimum that FirstNet prepare an environmental assessment to estimate and assess the cumulative effects of tower mortality to protected migratory birds.

A second meta-review of the published mortality data from scientific studies conducted in the U.S. and Canada (Longcore *et al.* 2013) strongly correlates population effects to at least 13 species of Birds of Conservation Concern (BCC, USFWS 2008). These are mortalities to BCC species based solely on documented collisions with communication towers in the U.S. and Canada, ranging from estimated annual levels of mortality of 1 to 9% of their estimated total population. Among these where mortality at communication towers was estimated at over 2% annually are the Yellow Rail, Swainson's Warbler, Pied-billed Grebe, Bay-breasted Warbler, Golden-winged Warbler, Prairie Warbler, and Ovenbird. Longcore *et al.* (2013) emphasized that avian mortality associated with anthropogenic sources is almost always reported in the aggregate, *i.e.*, "number of birds killed," which cannot detect species-level effects necessary to make effective and meaningful conservation assessments, including determining cumulative effects. These new findings strongly suggest the need for at least an environmental assessment by FirstNet, or more likely, an environmental impact statement.

### ***Radiation Impacts and Categorical Exclusions***

There is a growing level of anecdotal evidence linking effects of non-thermal, non-ionizing electromagnetic radiation from communication towers on nesting and roosting wild birds and other wildlife in the U.S. Independent, third-party studies have yet to be conducted in the U.S. or Canada, although a peer-reviewed research protocol developed for the U.S. Forest Service by the Service's Division of Migratory Bird Management is available to study both collision and radiation impacts (Manville 2002).

As previously mentioned, Balmori (2005) found strong negative correlations between levels of tower-emitted microwave radiation and bird breeding, nesting, and roosting in the vicinity of electromagnetic fields in Spain. He documented nest and site abandonment, plumage deterioration, locomotion problems, reduced survivorship, and death in House Sparrows, White Storks, Rock Doves, Magpies, Collared Doves, and other species. Though these species had historically been documented to roost and nest in these areas, Balmori (2005) did not observe these symptoms prior to construction and operation of the cellular phone towers. Balmori and Hallberg (2007) and Everaert and Bauwens (2007) found similar strong negative correlations

among male House Sparrows. Under laboratory conditions, DiCarlo *et al.* (2002) raised troubling concerns about impacts of low-level, non-thermal electromagnetic radiation from the standard 915 MHz cell phone frequency on domestic chicken embryos – with some lethal results (Manville 2009). Given the findings of the studies mentioned above, field studies should be conducted in North America to validate potential impacts of communication tower radiation – both direct and indirect – to migratory birds and other trust wildlife species.

| 31                                                                                                                                               | Executive Summary | Table ES5-6                                                    | In addition to the BMPs and mitigation measures listed here, particularly the “Install anti-perching or nesting devices on existing or new structures” measure, we recommend that structures containing the fewest perching options be used in areas where raptor and raven predation of sensitive resources is a concern. Where raptor electrocution is a concern, use of structures and components compatible with the guidance in the Avian Power Line Interaction Committee’s (APLIC) 2006 “Suggested Practices for Avian Protection on Power Lines: The State of the Art in 2006” electrocution manual should be implemented. Where collision is a hazard, we recommend the APLIC’s 2012 Reducing Avian Collisions with Power Lines: The State of the Art in 2012” manual be implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 18-61                                                                                                                                            | 18.1.4.2          | Table 18.1.4-1:<br>Relevant Wyoming Water laws and Regulations | <p>It is important to consider the sensitive nature of water use in Wyoming. Two of our largest basins (Platte River and Colorado River) have recovery programs initiated to ensure depletions of the water do not cause jeopardy of federally listed plants and animals that occur downstream. Platte River: On June 16, 2006, the USFWS issued a programmatic biological opinion (PBO) for the Platte River Recovery Implementation Program (PRRIP) and water-related activities<sup>1</sup> affecting flow volume and timing in the central and lower reaches of the Platte River in Nebraska. The action area for the PBO included the Platte River basin upstream of the confluence with the Loup River in Nebraska and the mainstem of the Platte River downstream of the Loup River confluence. Federally listed species affected by depletions in Wyoming of the Platte River are the whooping crane and its critical habitat, the interior least tern, the northern Great Plains population of the piping plover, the pallid sturgeon, and the western prairie fringed orchid. For more information on the PRRIP, visit our website at <a href="https://www.fws.gov/platteriver/index.php">https://www.fws.gov/platteriver/index.php</a>.</p> <p>Colorado River: A Recovery Implementation Program for Endangered Fish Species in the Upper Colorado River Basin (Recovery Program) was initiated on January 22, 1988. The Recovery Program was intended to be the reasonable and prudent alternative to avoid jeopardy to the endangered fish by depletions from the Upper Colorado River. In order to further define and clarify the process in the Recovery Program, a section 7 agreement was implemented on October 15, 1993, by the Recovery Program participants. Federally listed species affected by depletions in Wyoming of the Colorado River are the humpback chub and its critical habitat, bonytail and its critical habitat, Colorado pikeminnow and its critical habitat, and razorback sucker and its critical habitat. For more information on the Recovery Program, visit the <a href="http://www.coloradoriverrecovery.org/">http://www.coloradoriverrecovery.org/</a> website.</p> <p>The effects of the Project on the federally listed species in both the Platte River and the Colorado River should be analyzed in the NEPA document and the section 7 consultation for this Project.</p> |

<sup>1</sup> The term “water-related activities” means activities and aspects of activities that (1) occur in the Platte River basin upstream of the confluence of the Loup River with the Platte River; and (2) may affect Platte River flow quantity or timing, including, but not limited to, water diversion, storage and use activities, and land use activities. Changes in

| 18-77                                                                                                                                                     | 18.1.6.2              | Table 18.1.6-1: Relevant Wyoming Biological Resources Laws and Regulations | The table here contains only three relevant statutes, laws, or regulations. These may be specific only to Wyoming, but a reader only interested in Wyoming will question where the national statutes, laws, and regulations are listed. Recommend pointing to a specific table where national or multi-state statutes, laws, and regulations are listed. Also recommend including Title 11, Chapter 5, Section 102.a.xi for the Wyoming Weed and Pest Control Act of 1973; BLM Special Status Species Management Policy 6840; USFS Manual 2670; Wyoming Statutes 23-3-102, 23-3-103, 23-1-101, 23-1-103, 23-1-302, and 23-3-108; and State of Wyoming Executive Order 2015-4.                                                                 |
| 18-87                                                                                                                                                     | 18.1.6.4              | Reptiles and Amphibians                                                    | The Wyoming toad ( <i>Bufo [Anaxyrus] baxteri</i> ) is a federally endangered amphibian that occurs only in the Laramie Basin in Wyoming. Recommend mentioning here or referencing a description of the species in 18.1.6.6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 18-88                                                                                                                                                     | 18.1.6.4              | Invasive wildlife species                                                  | The text states that, "Species such as gypsy moth, Asian longhorn beetle, and emerald ash borer are of particular concern in Wyoming..." It is not made clear whether these species occur in Wyoming or whether the concern arises from the need to prevent these species from entering the state to "cause irreversible damage to native forests."                                                                                                                                                                                                                                                                                                                                                                                           |
| 18-93                                                                                                                                                     | 18.1.6.6              | Table 18.1.6-3 and Black-footed ferret section                             | The black-footed ferret does not have Endangered status in Wyoming. On October 30, 2015, the USFWS designated the nonessential experimental area in the State of Wyoming in accordance with section 10(j) of the ESA (80 FR 66821). This acknowledges that the likelihood of identifying wild ferrets in Wyoming, outside of those resulting from reintroductions, is distinctly minimal and that it is unlikely that black-footed ferrets in Wyoming have persisted through drastic reductions of prairie dog complexes even with recent expansions of prairie dog complexes. We encourage project proponents to protect all prairie dog towns or complexes for their value to the prairie ecosystem and the many species that rely on them. |
| 18-93 to 18-95                                                                                                                                            | 18.1.6.6              | Table 18.1.6-3 and Grizzly bear section                                    | The grizzly bear in the Greater Yellowstone Ecosystem Distinct Population Segment (GYEDPS) is threatened, but is currently under review and proposed for delisting. Outside of the GYEDPS, the grizzly bear will remain threatened.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

temperature and sediment transport will be considered impacts of a "water related activity" to the extent that such changes are caused by activities affecting flow quantity or timing. Impacts of "water related activities" do not include those components of land use activities or discharges of pollutants that do not affect flow quantity or timing.

| 18-95            | 18.1.6.6       | Northern long-eared bat section                                         | <p>The northern long-eared bat was not listed as endangered in 2013 as the text here states. Instead, it was proposed as endangered with an open comment period. The species was listed in 2015 as threatened with an interim 4(d) rule, which was finalized in January 2016. The 4(d) rule provides flexibility to landowners, land managers, government agencies and others as they conduct activities in areas that may affect the northern long-eared bat. In areas of the northern long-eared bat's range that have not yet been affected by white-nose syndrome (WNS), defined as outside the WNS zone in the final 4(d) rule, such as in Wyoming, incidental take (unintentional harm to bats incidental to otherwise lawful activities) is not prohibited. Even though the final 4(d) rule excepts incidental take, federal agencies still have an obligation to consult on may affect determinations. This obligation may be covered if the federal agency complies with measures outlined in the framework for the USFWS's January 5, 2016, programmatic biological opinion on the final 4(d) rule. In addition, purposeful take, other than for human safety or removal of bats from dwellings, is prohibited.</p> <p>In addition to the three counties in northeastern Wyoming, the northern long-eared bat has been confirmed in the Laramie Peak region of the Medicine Bow National Forest in northeastern Albany County, though the individuals recorded here may not represent a breeding population.</p> |
| 18-99            | 18.1.6.6       | Colorado butterfly plant section                                        | <p>The text states that the Colorado butterfly plant is a perennial flowering plant and that it is approximately 2 feet tall. These are generally true, though the better description of the species is that it is perennial but semelparous (vegetative for one to three years; then bolts, flowers, sets seed, and dies in one year), and that individuals can reach over four feet tall, depending on competition with surrounding vegetation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 18-100           | 18.1.6.6       | Ute ladies'-tresses orchid                                              | <p>The text states that the ULT occurs in 22 counties across the entirety of the state. This is a misinterpretation of the area of influence map found on the species' website (labeled here as USFWS 2015r). We actually have far fewer known occurrences than the map would suggest, but the state has not been extensively surveyed and so we modeled suitable habitat and provided a buffer of those suitable habitats. The area of influence is the area in which the species may occur and projects within which may affect the species.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 18-242           | 18.2.4.2       | Table 18.2.4-1: Impact significance rating criteria for water resources | <p>The potential effects from water usage in the Platte River and Colorado River basins should be analyzed here. Water use may include construction (such as concrete batch plants), dust abatement (such as on constructed or utilized access roads), and water use of constructed facilities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 18-280 to 18-287 | 18.2.6.4       | Birds                                                                   | <p>The USFWS recommends that the suggested practices by the Avian Power Line Interaction Committee be followed to minimize impacts to migratory birds through collision and electrocution (see <a href="http://www.aplic.org">www.aplic.org</a> for the 2006 electrocution and 2012 collision manuals) for all overhead lines.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 18-290                                                                                                                                           | 18.2.6.4       | New Wireless Communication Towers | <p>Communication towers are currently estimated to kill between four and five million birds per year. A great deal of the mortality is a result of collisions with supporting guy wires. Additionally, the type of safety lighting on these towers appears to influence their attractiveness to birds. In order to minimize the potential for impacts to migratory birds, the USFWS urges consideration of the following siting and construction recommendations.</p> <ol style="list-style-type: none"> <li>1. If possible, new communications equipment should be co-located on an existing tower or similar structure (e.g. billboard, water tower, or building mount). Depending on tower load factors, from 6 to 10 providers may co-locate on an existing tower.</li> <li>2. Where co-location is not feasible and a new tower must be constructed, all efforts should be taken to construct towers no more than 199 feet above ground level (AGL), that do not require guy wires (e.g. use a lattice, monopole structure, etc.). Such towers should be unlighted if Federal Aviation Administration (FAA) regulations permit.</li> <li>3. If constructing multiple towers, providers should consider the cumulative effects of all of those towers to endangered, threatened, proposed, and candidate species and migratory birds as well as the effects of each individual tower.</li> <li>4. If at all possible, new towers should be sited within existing antenna farms. Avoid siting towers near (within 3 to 5 miles of) wetlands, other known bird concentration areas (e.g., state or Federal refuges, staging areas, rookeries), in known migratory or daily movement flyways, or in habitat of threatened or endangered species. Towers should not be sited in areas with a high incidence of fog, mist, or low ceilings.</li> <li>5. If taller (greater than 199 feet AGL) towers requiring lights for aviation safety must be constructed, the minimum amount of pilot warning and obstruction avoidance lighting required by the FAA should be used. Unless required by the FAA, only white strobe lights should be used at night, preferably with the minimum number, minimum intensity, and minimum number of flashes per minute (longest duration between flashes) allowable by the FAA. Current research indicates that solid or pulsating (beacon) red lights attract night-migrating birds at a much higher rate than white strobe lights.</li> <li>6. Towers designed using guy wires for support that are proposed to be located in known raptor or waterbird concentration areas or daily movement routes, or in major diurnal migratory bird movement routes or stopover sites, should have daytime visual markers (e.g., bird diverter devices) on the wires to prevent collisions by these diurnal moving species. For guidance on markers, the Avian Power Line Interaction Committee has published guidance (<i>Reducing Avian Collisions with Power Lines: The State of the Art in 2012</i> and <i>Suggested Practices for Raptor Protection on Power Lines: The State of the Art in 2006</i>). Copies can be obtained at <a href="http://www.aplic.org/">http://www.aplic.org/</a>.</li> </ol> |

| Page Number      | Section Number | Line Number or Table Number                                 | Comment or Text Revision                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------|----------------|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18-290           | 18.2.6.4       | New Wireless Communication Towers                           | <p>(continued from previous page)</p> <p>7. Towers and attendant facilities should be sited, designed, and constructed to avoid or minimize habitat loss within and adjacent to the tower footprint. Road access and fencing should be minimized to reduce or prevent habitat fragmentation and disturbance, and to reduce above-ground obstacles to birds in flight.</p> <p>8. If significant numbers of breeding, feeding, or roosting birds are known to occur within the tower construction area, relocation to an alternate site is recommended. If this is not possible, seasonal restrictions on construction may be advisable in order to avoid disturbance during periods of high bird activity.</p> <p>9. New towers should be designed structurally and electrically to accommodate the applicant/licensee's antennas and comparable antennas for at least two additional users (minimum of 3 users for each tower structure), unless this design would require the addition of lights or guy wires to an otherwise unlighted and/or non-guyed tower.</p> <p>10. Security lighting for on-ground facilities and equipment should be down-shielded to keep light within the boundaries of the site.</p> <p>11. USFWS personnel and/or researchers from the Communication Tower Working Group or its designees should be allowed access to the site to evaluate bird use, conduct dead-bird searches, and to conduct various research.</p> <p>12. Towers no longer in use or determined to be obsolete should be removed within 12 months of cessation of use.</p> <p>Although these measures will provide significant protection for migratory birds, implementation of these measures alone will not remove any liability should violations of the MBTA or the Eagle Act occur. The U.S. Fish and Wildlife Service Division of Law Enforcement and the U.S. Department of Justice have used enforcement and prosecutorial discretion in the past regarding individuals or companies who have made good faith efforts to avoid the take of migratory birds. We acknowledge that you intend to avoid construction during sensitive time periods and within specific spatial buffers for listed species. We recommend that nesting migratory birds also be avoided during the nesting season within species-specific buffers. As a part of the Project, we recommend monitoring of avian use of Project facilities as well as reporting avian mortality events.</p> |
| 18-293 to 18-294 | 18.2.6.5       | Indirect Injury/Mortality to Fisheries and Aquatic Habitats | <p>Water quantity is a significant concern in the arid west, particularly for the Platte River Basin and the Colorado River Basin. See comment above on page 18-61, section 18.1.4.2, Table 18.1.4-1: Relevant Wyoming Water laws and Regulations regarding impacts to the Platte and Colorado River Basins.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Enclosure 2:USFWS Wyoming Ecological Services Field Office<br/>Comment Tracking Table<br/>PDEIS for the Nationwide Public Safety Broadband Network</b> |                       |                                                                     |                                                                                                                                                                                                                                                                            |

| <b>Page Number</b>                                                                                                                                        | <b>Section Number</b> | <b>Line Number or Table Number</b>                                  | <b>Comment or Text Revision</b>                                                                                                                                                                                                                                            |
| 18-301 to 18-302                                                                                                                                          | 18.2.6.6              | Table 18.2.6-2: Impact Significance Rating Criteria for T&E Species | The breakdown presented here regarding what level of effects will lead to no effect, may affect and not likely to adversely affect, and may affect and likely to adversely affect provides a good basis for the consultation on listed species under section 7 of the ESA. |
| 18-304                                                                                                                                                    | 18.2.6.6              | T&E Plants                                                          | The Fremont County rockcress is a federal Candidate species, similar to the Whitebark pine. It should be considered here as well, since it is mentioned on page 18-98 in section 18.1.6.6.                                                                                 |
| 18-305                                                                                                                                                    | 18.2.6.6              | Reproductive effects to T&E Plants                                  | The reproductive success of federally listed plants may be impacted by the Project, particularly through use of insecticides or pesticides as well as dust generated from construction and use of access roads.                                                            |
| 19-7 to 19-10                                                                                                                                             | 19.4.1                | Water Resources BMPs                                                | A spill prevention, control, and countermeasure plan (SPCCP) should be developed for the Project. This would also apply to 19.5.1 (Wetlands), 19.6.3.1 (Fisheries and Aquatic Habitats), 19.6.4.1 (T&E Species), and 19.15.1 (Human Health and Safety).                    |
| 19-22                                                                                                                                                     | 19.6.4.1              | T&E Species BMPs                                                    | Recommend adding a measure about control of fugitive dust generated by the Project's use of unpaved roads and construction. Dust can settle on plants and block their ability to photosynthesize, and can disrupt pollination success.                                     |
| 19-22                                                                                                                                                     | 19.6.4.1              | T&E Species BMPs                                                    | Recommend adding a measure on controlling speed limits on access roads, particularly within areas where a federally listed animal may be struck by construction and/or maintenance vehicles.                                                                               |

**Subject:** Comment on FirstNet Draft Environmental Impact Statements

**Wired technologies are far more reliable, far more secure, and much faster than wireless technologies. In addition, the electromagnetic radiation emitted by wireless technologies, such as cell phones, cordless phones, smart meters, cell towers, and Wi-Fi, has been declared a Class 2B carcinogen by the World Health Organization. Numerous peer reviewed studies have also found biological health impacts down to very low exposure levels, far below our FCC guidelines which are largely ineffective,**

I kindly request that Congress eliminate the provision of wireless broadband from the FirstNet mission. At the very least, delay implementation of the wireless First Responder component until a system is designed that minimizes RF emissions from antennas and communicators.

There are numerous cancer studies with findings regarding first responders,

Please also see this NTP study: <http://ehtrust.org/science/facts-national-toxicology-program-cellphone-rat-cancer-study/>

Thus, communicators should be able to contact each other directly, not require an outside antenna (certain types of buildings might make communication to an outside antenna impossible anyway), but also be able to utilize it if needed and available. Radiofrequency emissions should not occur continuously, only as needed.

Here are just a few more studies:

The Central Region document is available at the following site:  
<https://www.regulations.gov/document?D=FIRSTNET-2016-0003-0001>

The East Region  
<https://www.regulations.gov/document?D=FIRSTNET-2016-0002-0001>

The South region is available for review and comment at the following link:  
<https://www.regulations.gov/document?D=FIRSTNET-2016-0005-0001>

West Region  
<https://www.regulations.gov/document?D=FIRSTNET-2016-0004-0001> or  
<https://www.regulations.gov/docketBrowser?rpp=25&so=DESC&sb=commentDueDate&po=0&D=FIRSTNET-2016-0004>

([http://emrstop.org/index.php?option=com\\_docman&task=doc\\_details&gid=4&Itemid=18](http://emrstop.org/index.php?option=com_docman&task=doc_details&gid=4&Itemid=18))

*"Changes of Clinically Important Neurotransmitters under the Influence of Modulated RF Fields- A Long-term Study under Real-life Conditions"*

([http://www.radiationresearch.org/images/RRT\\_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2020July%202011.pdf](http://www.radiationresearch.org/images/RRT_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2020July%202011.pdf))

*"How does long term exposure to base stations and mobile phones affect human hormone profiles?," Eskander et al.*

(<http://www.sciencedirect.com/science/article/pii/S0009912011027330>)

FirstNet wireless technology is supposed to be LTE 4G - much higher RF levels are emitted by 4G technologies than necessary,

Remember, in a disaster, wireless technologies fail. Please make sure we keep safe, affordable, reliable corded landline telephone service, and abandon initiatives to do otherwise

Do not stand behind FCC regulations. FCC regulations do not protect from "any potential effects," as this letter from Mr. Norbert Hankin from the Center for Science and Risk Assessment, Radiation Protection Division, EPA, regarding the limitations and purpose of the FCC exposure standards notes

([http://www.emrpolicy.org/litigation/case\\_law/docs/noi\\_epa\\_response.pdf](http://www.emrpolicy.org/litigation/case_law/docs/noi_epa_response.pdf))

) This very credible evidence is unmentioned and ignored. Furthermore FCC regulations are poorly enforced. (An issue which is completely ignored in the PEIS.) Rampant violations are documented by the Wall Street Journal and EMR Policy Institute. A detailed investigation by the EMR Policy Institute showed almost no enforcement of existing FCC RF limits and rampant violations (<http://www.marketwire.com/press-release/-1770139.htm>)

). A Wall Street Journal investigation (<http://online.wsj.com/articles/cellphone-boom-spurs-antenna-safety-worries-1412293055>)

) reports similar findings with one in ten towers out of compliance and experts concerned that out of compliance towers could be transmitting in the thermal range by around the end of 2015.

A fully elucidated mechanism should not be required to take action to protect public health when detrimental effects are found. Serious biological effects are acknowledged and then ignored on page 2-20.

**The two mechanisms that are extremely plausible and well-supported in the literature are completely ignored:**

**Oxidation -**

1. Yakymenko, I., Tsybulin, O., Sidorik, E., et al. (2015). Oxidative mechanisms of biological activity of low-intensity radiofrequency radiation. Electromagn Biol Med. Jul;7:1-16. <http://www.ncbi.nlm.nih.gov/pubmed/26151230#>

**Ca 2+ channels**

1. Pall, M. (2014). Microwave electromagnetic fields act by activating voltage-gated calcium channels: why the current international safety standards do not predict biological hazard Recent Res Devel Mol Cell Biol 7.
2. Pall, M. L. (2015). Microwave frequency electromagnetic fields (EMFs) produce widespread neuropsychiatric effects including depression. J Chem Neuroanat DOI: 10.1016/j.jchemneu.2015.08.001. <http://dx.doi.org/10.1016/j.jchemneu.2015.08.001>
3. Pall, M.L. (2016)
4. Electromagnetic Fields Act Similarly in Plants as in Animals: Probably Activation of Calcium Channels via Their Voltage Sensor Current Chemical Biology, 2016, Vol. 10, No. 1.

The PEIS uses outdated documents to excuse inaction.

Contrary to their assertion, FCC limits do not protect against adverse effects, even the DOI noted **"the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today"** ([http://www.ntia.doc.gov/files/ntia/us\\_doi\\_comments.pdf](http://www.ntia.doc.gov/files/ntia/us_doi_comments.pdf))

The opening of the FCC docket to re-evaluate limits is acknowledged, but then ignored. The logical step of delaying implementation of the wireless component until that is completed is not even mentioned.

The National Toxicology Program findings are not even mentioned.

Their exposure calculations are based on only one antenna and work out to 477uW/m2, which is over the level shown to cause biological effects (<http://emfsafetynetwork.org/wp-content/uploads/2013/08/Biological-Effects-From-RF-Radiation-and-Implications-for-Smart-Meters-June-5-2013-2.pdf> see graph at end). Most towers or building antenna sites have more than one antenna radiating in any given direction, plus signals come from other nearby sites, and the ground infrastructure such as cellphones, tablets etc. So levels at ground level are likely to be far higher than that and levels in apartments or homes which get a direct hit from neighboring buildings could be far higher depending on distance.

Several IARC panelists have made public statements that the evidence now shows that radiofrequency radiation should be classified as either a class 2A or class 1 human carcinogen. The recent (ignored) National Toxicology Program findings support this. This should cause the wireless portion to be stopped and FirstNet should explain why to Congress, but no mention is made and therefore no such action is recommended.

They refuse to take action to protect birds in spite of lab and epidemiological evidence that support each other in finding hard because it requires "interpretation and extrapolation." (2-20) Doesn't it always?

They hardly touch on tree damage and totally ignore the following tree and plant studies:

- Radiofrequency radiation injures trees around mobile phone base stations: [https://www.researchgate.net/publication/306435017\\_Radiofrequency\\_radiation\\_injures\\_trees\\_around\\_mobile\\_phone\\_base\\_stations](https://www.researchgate.net/publication/306435017_Radiofrequency_radiation_injures_trees_around_mobile_phone_base_stations)
- Adverse Influence of Radio Frequency Background on Trembling Aspen Seedlings: Preliminary Observations <https://www.hindawi.com/journals/ijfr/2010/836278/>
- Review: Weak radiofrequency radiation exposure from mobile phone radiation on plants: <http://www.ncbi.nlm.nih.gov/pubmed/27650031?dopt=Abstract>
- Tree damage in the vicinity of mobile phone base stations: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/06/Tree-damages-in-the-vicinity-of-mobile-phone-base-stations.pdf>
- The trees make it easy to recognize the effects of RF-EMF. Examples of tree damage: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/09/Trees-in-Bamberg-and-Hallstadt-Dokumentation-2006-2016.pdf>
- Pall, M.L. (2016) Electromagnetic Fields Act Similarly in Plants as in Animals: Probably Activation of Calcium Channels via Their Voltage Sensor Current Chemical Biology, 2016, Vol. 10, No. 1. **-IMPORTANT MECHANISTIC DISCUSSION**

On 2-20 the PEIS acknowledges "A number of other studies generally touch upon the nature of RF exposure and the disruption of biological processes that are fundamental to plant and animal growth and health, including but not limited to behavior, DNA damage, immune deficiencies, reproductive system effects, hormone dysregulation, degraded cognition and sleep, and desynchronization of neural activity (BioInitiative Working Group, 2012) (Balmori, A., 2005)," **but then no protective action is being taken because** "The common practice for NEPA documents related to cellular towers is to cite FCC standards and point to the fact that they would be built and operated according to allowable FCC RF emission limits. Some NEPA documents that have more directly addressed the RF emissions potential largely point to the existing literature and suggest that although there is evidence that RF emissions could potentially affect some species, the evidence is insufficient to support a finding of adverse impacts on these species due to RF emissions (Ballistic Missile Defense Organization, 2000) (FCC, 2012)."

This approach was not allowable by the courts in other situations. Especially since the inadequacy of the FCC RF limits is now acknowledged by both the DOI and the EPA. In addition, numerous studies have added to the knowledge about the hazard that RF poses to human health since both 2000 and 2012, including the NTP study which has found that RF is carcinogenic and breaks DNA.

Please consider the best interests of us and the environment before making a potentially poor choice. DO THE RIGHT THING (hint: it's not hard!)

**Subject:** Pending bill regarding RF emissions

Dear Ms. Walker,

I am a 70 year old woman who's health has been compromised by the increasing amount of RF due to wireless implements. My world has become smaller as it is impossible to do many things I would have done such as going to the library, shopping in stores or having a coffee with a friend at a coffee shop to name a few. Not earth shattering you might say, but my world has diminished nonetheless. I also watched the health of my daughter, who is a young woman, 26 years, deteriorate dramatically when living in a building with cell phone towers on top. I have read scientific reports about fire fighters contracting brain cancer due to the cell phone towers on their firehall. The studies are numerous and even if for some strange reason you do not find it conclusive, it should be enough to at least give pause, be cautious and err on the side of safety.

I urge you to consider the science and support better regulations regarding cell use and first responders.

Sincerely,  
Michelle Illiatovitch

**Subject:** Re: FirstNet PEIS

Dear Ms. Walker,

I did not become aware of the paper, *When theory and observation collide: Can non-ionizing radiation cause cancer?*, until after I sent my comment on the FirstNet PEIS to you. I am sending it now so that you can include the information in the PEIS. It provides further support for my contention that "FirstNet must inform Congress of the health and environmental hazard posed by the RF radiation emission required for wireless broadband and request Congress to eliminate provision of wireless broadband internet from FirstNet's mission." and also my further points that "FirstNet must inform Congress of the health and environmental hazard posed by the RF radiation emission required for wireless broadband and request Congress to eliminate provision of wireless broadband internet from FirstNet's mission." and "FirstNet should request that the NTP quickly undertake and complete toxicology studies comparing the different communication technologies, including, but not necessarily limited to, 3G, 4G, and 5G LTE technologies so that FirstNet can utilize the least toxic least biologically active technology for its first responder's interoperable communication system."

The guideline authored by the **European Academy for Environmental Medicine (EUROPAEM)**, which I also did not have yet at the time I sent you my comment, provides further support for the above mentioned points. *EUROPAEM EMF Guideline 2016 for the prevention, diagnosis and treatment of EMF-related health problems and illnesses* (<https://www.degruyter.com/view/j/reveh.ahead-of-print/reveh-2016-0011/reveh-2016-0011.xml?format=INT>) states "Studies, empirical observations, and patient reports clearly indicate interactions between EMF exposure and health problems." They are clear that in treating individuals experiencing health problems related to EMF exposure, including from radiation emitted by wireless technology, that the preferred treatment is to eliminate exposure - "The primary method of treatment should mainly focus on the prevention or reduction of EMF exposure, that is, reducing or eliminating all sources of high EMF exposure at home and at the workplace." The authors reiterate and support the statement by Hedendahl, Carlberg, and Hardell that "It is time to consider ELF EMF and RF EMF as environmental pollutants that need to be controlled". They also make it clear that sources of EMF, including radiation from wireless technology, should be minimized in society so that previously injured individuals can fully participate.

Neither the population nor first responders should be exposed involuntarily to radiation from wireless technology since studies have found it to be carcinogenic and biologically harmful.

Thank you for adding this letter and these studies to the commentary on the First Net PEIS.

Sincerely,  
Catherine Kleiber

## **Public Comment - NIDILRR**

Catherine Kleiber

### **Public Listening Session Comment November 18, 2016**

My name is Catherine Kleiber. I have radiofrequency sickness, an environmentally-induced functional impairment caused by exposure to radiofrequencies, from either wireless technology or “dirty” electricity. I am addressing you today to highlight the need to again make public places and buildings accessible for people with radiofrequency sickness.

I experience many symptoms, including cardiac arrhythmias, cognitive difficulties, memory problems, headaches, and fatigue when I am around radiation from wireless technology. The presence of wireless internet and wireless devices in public places now prevents me from using the public library or the judicial system, participating in public meetings, going to restaurants, going shopping, and using public transportation. All are things that I used to be able to do without experiencing functional impairment prior to the proliferation of wireless devices. Most importantly, I can no longer safely access medical care due to the ubiquitous presence of wireless technology in hospitals and clinics. I am not alone. Over 300 comments from U.S. citizens pleading with the FCC to establish biologically-based safety limits for radiofrequency radiation to replace the existing outdated thermally-based radiofrequency limits were submitted in their docket to re-evaluate the RF limits.

It is extremely important that people with radiofrequency sickness be able to access hospitals, medical facilities, and government buildings. WiFi and other wireless technology poses a significant, potentially life-threatening, access barrier for people with radiofrequency sickness. Access to medical care is generally considered a human right, a right now being denied those with radiofrequency sickness. Access to public facilities by people with radiofrequency sickness is protected under the 2008 ADA Amendments which specifically protects individuals with environmentally-induced functional impairments. Radiofrequency sickness is a functional impairment induced by radiofrequency exposure, which can cause serious, even life-threatening functional impairment.

A replicated double-blind placebo-controlled study documented that cardiac arrhythmias occur in some people in response to exposure to radiation from cordless phones. This is obviously a potentially life-threatening functional impairment. My children experience cardiac arrhythmia in response to radiation from wireless technology, as do I.

My husband, a type 1 diabetic, finds that his blood sugar elevates markedly in response to radiation from wireless technology. If he tries to compensate by taking additional insulin, as he normally would, his blood sugar plunges dangerously low upon leaving the affected area. He recently had a new and very scary reaction. While at a federal office for an essential appointment, he was forced into close proximity to two functional smart phones and a WiFiing computer. He went into the office feeling fine with a normal blood sugar and came out with a very high blood sugar, a very elevated body temperature of 101 degrees Fahrenheit, and feeling awful. It took two days for his blood sugar and body temperature to return to normal and about a week to feel well. RF has been shown to cause calcium ion efflux.

Inappropriate calcium efflux is known to cause a condition called malignant hyperthermia which can be fatal and is usually caused by certain anesthetics. Fortunately for him, the reaction stopped accelerating when he came home to our shielded house and then crawled into our shielded bed. It could easily be a fatal reaction for someone who did not realize what was happening.

The presence of wireless radiation at levels which cause functional impairment is making it harder for us to earn our living. We had to quit bringing our pasture-raised meat products to the local farmers markets two years ago since my husband could no longer be at the market without experiencing serious neurological effects suggestive of early ALS that disappeared when he stopped attending market. I have not been able to function well enough cognitively at the market to vend for several years. Being unable to sell at the market has decreased our ability to earn our living.

Obviously, if we cannot tolerate the RF environment outside in the city, working in an office or store in the city with their multiplicity of WiFi routers and high volumes of individual cellphones would not be possible.

Disability claims related to symptoms or syndromes which have been connected to functional impairment by RF (RF Sickness) are rising. People with multiple sclerosis, fibromyalgia, chronic fatigue syndrome, asthma, and diabetes have improved when their RF exposure from wireless technology and “dirty” electricity is minimized. Eliminating RF from public places will improve accessibility and decrease disability.

It is time that national accessibility standards address the very serious access barrier posed by radiofrequency pollution.

## **Background**

### **Our Experience: Wireless Technology is an Access Barrier**

Radiofrequency radiation, such as the radiation given off by wireless devices and their base stations (antennas) can cause an environmentally-induced functional impairment called Radiofrequency sickness (see Dodge [http://www.magdahavas.com/wordpress/wp-content/uploads/2010/08/Dodge\\_1969.pdf](http://www.magdahavas.com/wordpress/wp-content/uploads/2010/08/Dodge_1969.pdf)).

I have radiofrequency sickness which was originally misdiagnosed as chronic fatigue syndrome. However, once I found out I was being exposed to large amounts of radiofrequencies from electrical pollution, including “dirty” power on my wires and plumbing, and reduced that exposure as much as I was able, I began to recover almost immediately.

Here is a brief summary of symptoms I experienced as a result of the functional impairment caused by radiofrequency exposure from electrical pollution: heart palpitations, very pain sensitive, constant nerve pain, sluggish reactions, poor depth perception, muscle weakness, lactic acid buildup with little exertion, unrefreshing sleep, often wakeful in the night, fatigue, night sweats, poor circulation to my extremities, reflux, difficulty concentrating, difficulty thinking, inability to make decisions, low-grade fever and chills, headaches, and a dry sore throat.

After we reduced our exposure as much as possible, I was well at home for years and able to participate in family gatherings, go to the doctors, and generally participate in society because I could always plug

in filters to minimize the electrical pollution. We had children. When my youngest was about three, our utility began installing transmitting electrical meters in the area. Shortly after that we all began experiencing serious functional impairment, even at home, from the radiofrequency pollution the transmitting electrical meters put on the electrical wiring along with the power line communications frequencies.

Utilities providing basic service (electricity, gas, and water) should not be allowed to use transmitting utility meters. There are many examples of utility companies bullying customers with threats of disconnected service to force them to take transmitting utility meters, including my family. There are many examples of people being disabled by the radiation from transmitting utility meters and even forced from the neighborhood by the radiation from neighbors' utility meters, even when they have been able to have an analog meter on their own home (see FCC docket below for some of them). We still had analog meters and yet, the radiation coming off of our end-of-the-line transformer from all the meters and cell towers caused cardiac arrhythmias in our two young children and for my husband and me.

We slept in a tent well away from the building site while we tried to deal with the utility and PSC. Our younger son's heart rate got so slow one night when we were forced by broken tent poles to sleep at home that he lost bladder control, wetting only his underwear because the volume of urine was so small. When I went to him in response to his call, he was agitated and upset, but his heart rate was very slow and the beats were weak and irregular. This continued for a couple of hours. We did not sleep in the house again after that until the utility company removed the secondary power line from their transformer to our house. It was obvious the situation was too dangerous to be allowed to continue. So, we did the only thing we could do and told the utilities to remove our service and we went off-grid since they refused to even properly investigate the situation, never mind do anything.

After going completely off-grid, we had three heavenly weeks. We slept well, felt well, and had lots of energy. Our pets' health improved. Most importantly, our sons' cardiac rhythms had almost completely normalized.

Unfortunately, the toxic exposure we received has left our whole family extremely sensitized to radiofrequency radiation so when, in early January 2012, 4G cellphone service was installed in our area we began to experience impairment quickly. Within a week, our sons' cardiac rhythms were again highly irregular. Our younger son was again waking us in the night crying and feeling unwell with a highly irregular cardiac rhythm. We have shielded in various ways and keep pulling them back from the brink.

The drastic measures we have taken (e.g. going off-grid, shielding) to reduce their exposure have momentarily stabilized them at about early stage 2 radiofrequency sickness. (See Dodge) We are very concerned that any increase in the radiofrequency radiation levels could again push them over the edge toward stage 3 radiofrequency sickness. They should not be involuntarily exposed to a pollutant that has such profound detrimental effects on them.

We are literally trapped on our farm and in our home as outdoor radiofrequency radiation levels have climbed rapidly over the few years. We have had to restrict the amount of time our outdoors-loving sons can be outside. They are now only able to be out a half an hour at a time a few times a week. If they are out more than that with any regularity their cardiac arrhythmias become severe enough that they become symptomatic. We have difficulty going anywhere due to all the radiation from towers and the WiFi and cellphones present indoors are even worse, often causing symptomatic arrhythmias almost immediately.

Because of the serious effects exposure to radiofrequencies has on my health, we have never owned a cellphone, cordless phones, wireless router, baby monitors, or subscribed to wireless internet.

Our children both experience health problems when exposed to radiofrequencies. They feel sick, become hyperactive, less able to think logically and control their behavior. They also sleep poorly in bad radiofrequency environments. The recent increase in radiofrequency radiation exposure from the transmitting electrical meters and wireless technology has given them chronic cardiac arrhythmias which improve when we can reduce their exposure. We have done this several times only to have ambient levels increase and cause the arrhythmia to return.

We are homeschooling them so they will not be exposed to the dangerous radiofrequency environment in our local public school. The school has both WiFi and high electrical pollution levels. We are unable to bring them to the zoo, museums, most parks, indeed almost anywhere, because of the ubiquitous presence of radiation from wireless technology.

Our social isolation by wireless technology is a total violation of our civil rights. Wireless technology needs to be eliminated from public buildings and public places.

### **Elimination of Wireless from Public Buildings and Public Places is a Reasonable Accommodation**

In consideration of wireless technology's exclusionary effect and the very real threat it poses to public health (see [www.bioinitiative.org](http://www.bioinitiative.org) and [http://www.iarc.fr/en/media-centre/pr/2011/pdfs/pr208\\_E.pdf](http://www.iarc.fr/en/media-centre/pr/2011/pdfs/pr208_E.pdf)) and the environment ([http://www.moef.nic.in/downloads/public-information/final\\_mobile\\_towers\\_report.pdf](http://www.moef.nic.in/downloads/public-information/final_mobile_towers_report.pdf)), it is reasonable to eliminate radiation from wireless devices from the public arena. Internet access should be provided using publicly available wired connections. In addition, radiofrequency radiation detectors can remind people to turn off wireless devices as they enter public buildings.

My family's on-going nightmare of societal exclusion and serious functional impairment, caused by the presence of biologically active levels of radiofrequencies on the electrical grid and radiofrequency radiation transmitted into the environment through use of wireless technology, is illustrative of why it is essential to establish biologically-based radiofrequency radiation safety limits. The Environmental Protection Agency should be given the authority to do so since the FCC lacks the expertise. In the meantime, eliminating radiation from wireless technology from public places would allow people with radiofrequency sickness to participate in society.

I have maintained the website [www.electricalpollution.com](http://www.electricalpollution.com) since 2002, shortly after I discovered that the radiofrequencies present on building wiring and flowing across the ground from non-linear time varying loads were making me, and others, sick. Research on the health effects of electrical pollution is available on the website on the Research Page. More technical information is available on the Technical Page. Electrical pollution is a very potent form of exposure to radiofrequencies. Exposure to all forms of radiofrequencies, including electrical pollution, must be included in standards regulating exposure of the general public to protect the public health during continuous exposure.

I have read widely on the research into the health effects of exposure to radiofrequencies. There is a growing body of evidence that the increased exposure to radiofrequencies from radiowave and

microwave transmitters and from electrical pollution are behind the public health crisis that has dramatically increased utilization of our medical system for chronic conditions. The article by Halberg and Johansson in *Pathophysiology*<sup>1</sup> supports this contention. The comprehensive review by Dr. Cherry, which documents health effects and explores mechanisms, besides thermal mechanisms, through which microwave and radiowave radiation can impact health, also supports the contention that exposure to microwave and radiowave radiation is a public health threat which is probably contributing to significant public illness. A review of the Soviet literature on radiofrequency sickness by Christopher Dodge<sup>3</sup> of the Naval Observatory discusses radiofrequency sickness in detail. The symptoms attributed to chronic exposure to radiofrequency radiation mirror the deterioration of health being seen in the U.S. in recent years, probably due to the dramatic increase in exposure to radiofrequencies from electrical pollution and wireless technology. Papers by Dr. Milham<sup>4</sup>, Dr. Havas<sup>5,6,7</sup> and Dr. Wertheimer<sup>8</sup> also show that exposure to electrical pollution constitutes a public health threat, as does a report by Char Sbraggia regarding health improvements experienced by teachers and students when the electrical pollution in their school was cleaned up (<http://www.electricalpollution.com/images/MelMinNurse.jpeg>). These are just a few of the papers I have read. However, **they provide a picture which should illustrate how reasonable it is to institute the accommodations necessary to enable people with radiofrequency sickness to participate in community life, utilize public services, and enter public buildings.**

1. Ö. Hallberg, O. Johansson, Apparent decreases in Swedish public health indicators after 1997 — Are they due to improved diagnostics or to environmental factors? *Pathophysiology* (2009)
2. Cherry, N. 2000 Criticism of the Health Assessment in the ICNIRP Guidelines for Radiofrequency and Microwave Radiation (100 kHz- 300 GHz)
3. Dodge C. Clinical and Hygienic Aspects of Exposure to Electromagnetic Fields. Biological Effects and Health Implications of Microwave Radiation, Symposium Proceedings, Richmond, Virginia, September 17-19, 1969.
4. Milham S, Morgan L. 2008 A New Electromagnetic Exposure Metric: High Frequency Voltage Transients Associated With Increased Cancer Incidence in Teachers in a California School. *American Journal of Industrial Medicine*.
5. Havas M, Olstad A. 2008. Power quality affects teacher wellbeing and student behavior in three Minnesota Schools, *Science of the Total Environment*, July.
6. Havas M. 2006. Electromagnetic hypersensitivity: biological effects of dirty electricity with emphasis on diabetes and multiple sclerosis. *Electromagnetic Biology Medicine* 25(4):259-68.
7. Havas M. 2008. Dirty Electricity Elevates Blood Sugar Among Electrically Sensitive Diabetics and May Explain Brittle Diabetes. *Electromagnetic Biology and Medicine*, 27:135-146.
8. Wertheimer N, Savitz DA, Leeper E. 1995 Childhood Cancer in Relation to Indicators of Magnetic Fields from Ground Current Sources *Bioelectromagnetics* 16: 86-96.

Accommodations for people with radiofrequency sickness are really common sense and societally beneficial because radiofrequency radiation poses a serious threat to the public health.

*“Public safety standards are 1,000 – 10,000 or more times higher than levels now commonly reported in mobile phone base station studies to cause bioeffects.”* (<http://www.bioinitiative.org/conclusions/>)

## **Accommodations necessary for people with radiofrequency sickness**

### **Provision of Basic Services:**

#### **Utilities - water, gas, electric**

People with radiofrequency sickness are being forced to choose between forced to experience serious environmentally-induced functional impairment in order to access utility services. NIDILRR needs to

put the PSC/PUCs on notice that it is their job to force utility companies to comply with the 2008 ADA Amendments which require accommodation of people with environmentally-induced functional impairment. At this time, many utilities and PSC/PUCs are flatly refusing to provide any accommodation, never mind the important accommodation of metering utility service with an analog mechanical meter which used to be standard operating procedure until recently. Many utilities are pretending these meters are no longer available. They are.

### **Telephone**

Telephone companies must be required to provide RF interference-free copperwire telephone service to people with RF sickness. Most people with RF sickness cannot use cellphones. Cable phones and fiber optic phones can come with electronics that emit biologically significant RFI (RF interference - which can be Incidental or Unintentional, but is still biologically active) and are intolerable to some people with RF sickness. Phone companies need to provide RF filters and DSL filters to people with RF sickness without a hassle. Experience has shown that RF cross-contamination between lines (DSL to non-DSL lines) and between lines and electrical grid RF can be biologically significant so all lines should be equipped with filters. (From a public health perspective, it would be best if these were provided to all customers as a matter of course. All people experience biological effects from RF exposure, but many are either still compensating well enough they are not symptomatic or they simply do not make the connection between exposure and symptoms.)

### **Transportation**

Most people with RF sickness are unable to use public transportation due to the presence of wireless radiation. Therefore, it is of paramount importance that people with RF sickness have access to stripped-down low RF automobiles. These would be the safest automobiles for everyone, but they are essential for those with RF sickness to retain independent mobility. For more details, please read my attached comment related to cars which was submitted into the TECHNOLOGICAL ADVISORY COUNCIL (TAC) NOISE FLOOR TECHNICAL INQUIRY (ET Docket No. 16-191).

### **Regulatory**

The FCC Noise Rules urgently need to be updated to prevent new electrical devices, lighting, etc. from being sold and used in the public arena that block access by people with radiofrequency sickness. The existing FCC Noise Rules are solely designed to prevent technological interference. They need to be revised to prevent new electrical devices from being access barriers or from causing a public health threat. For more details, please read my attached comment about the need to update the noise limits which was submitted into the TECHNOLOGICAL ADVISORY COUNCIL (TAC) NOISE FLOOR TECHNICAL INQUIRY (ET Docket No. 16-191).

Below is a list of accommodations necessary to allow people with radiofrequency sickness to once again participate fully in public and community life. It is divided into two categories - one for transmitted radiofrequency radiation and one for radiofrequency exposure from “dirty” electricity.

### **Transmitted radiofrequency radiation accommodations:**

- Adopt Salzburg, Austria radiofrequency radiation safety limits until biologically-based population-protective RF safety limits can be established (1microW/m<sup>2</sup> inside and 10microW/m<sup>2</sup> outside - lowered as necessary to prevent biological effects because our experience shows that levels should be below 3microW/m<sup>2</sup>).
- Eliminate wireless internet service from public places (including transportation).
- Transmitters on wireless devices turned off in public places - detectors should be installed at entrances to remind people.
- Hospitals only use wired internet, wired in-building networks, and wired devices within the hospital. This would also protect privacy and security.

- Cell and broadband antennas situated at a distance from hospitals and residential areas such that Salzburg radiation limits of 1microW/m<sup>2</sup> not exceeded inside the hospital or homes.
- Medical clinics use only wired in-office network and internet service and devices.

#### **“Dirty” electricity radiofrequency accommodations:**

- Kazakhstan “dirty” power standard adopted globally - maximum of 50 G/S units on Stetzerizer meter on building wiring. ([www.stetzerelectric.com](http://www.stetzerelectric.com))
- Daylighting should be encouraged. All new lighting installations must be low radiofrequency lighting e.g. properly engineered lighting with very low or no emission of Incidental or Unintentional RF. LED lights can be engineered to this standard, but many are not at this time and therefore emit high amounts of RF. (Additional benefits - LEDs are more energy efficient than fluorescent lighting and do not emit UV thereby allowing greater access for people with lupus.)
- Use of tiered lighting instead of dimmer switches (also saves energy).

See the Solutions page at [www.electricalpollution.com](http://www.electricalpollution.com) for a more comprehensive list of steps to minimize RF exposure.

### **Supplementary Information**

Please visit ([http://apps.fcc.gov/ecfs/comment\\_search/input?z=iw0f](http://apps.fcc.gov/ecfs/comment_search/input?z=iw0f) and search proceedings 03-137 and 12-357) to see the **over 300 comments from U.S. citizens pleading with the FCC to establish biologically-based safety limits for radiofrequency radiation** to replace the existing outdated thermally-based radiofrequency limits.

**The 1500-page BioInitiative Report on RF/MW health effects was published in 2012.** The authors are 29 scientists from ten countries. They reviewed thousands of studies showing interference with chemical processes in the body, implicating RF/MW in a whole spectrum of alarming effects including genetic damage, cancer, immune dysfunction, neurological injury, and infertility. The report can be found at [www.bioinitiative.org](http://www.bioinitiative.org). For people with radiofrequency sickness, these effects can be immediate and serious.

**Cardiac arrhythmias can be caused by wireless technology.** Recent replicated double blind studies show that a cordless phone base station operating at WiFi frequencies can cause cardiac arrhythmias in susceptible individuals. This short video discusses the cardiac effect that wireless can have- <http://www.youtube.com/watch?v=EI9fZX4iww>. View this video <http://www.youtube.com/watch?v=sv1E9IXUd6M> to see further discussion. You can read the studies at <http://www.magdahavas.com/wordpress/wp-content/uploads/2012/01/Havas-HRV-Ramazzini.pdf> and <http://www.ncbi.nlm.nih.gov/pubmed/23675629#>. Obviously, for susceptible people (like those of us with radiofrequency sickness), WiFi can make whole buildings inaccessible and unsafe. A recent study in rabbits found that not only did WiFi change heart function parameters, but it dramatically changed the cardiac effects of both dopamine and epinephrine: Saili L, et al. *Effects of acute exposure to WIFI signals (2.45 GHz) on heart variability and blood pressure in Albinos rabbit*. Environmental Toxicology and Pharmacology 40 (2015) 600–605. This should be of great concern since WiFi has become ubiquitous in medical settings and may compromise the effectiveness of essential medical interventions, especially for people with radiofrequency sickness. **Medical care is considered to be a basic human right, but people with radiofrequency sickness can no longer access it without potentially endangering their lives or at least experiencing severe functional impairment.**

**Causal connections between radiofrequency exposure and biological functional impairment.** More recent papers look specifically at causality such as Pall ML *Microwave frequency electromagnetic fields (EMFs) produce widespread neuropsychiatric effects including depression*. J Chem Neuroanat. 2015 Aug 20. (<http://www.sciencedirect.com/science/article/pii/S0891061815000599>). It discusses the causal relationship between exposure to radiation from wireless technology and neuropsychiatric effects. Mechanisms of action are also discussed. Yakymenko et al discuss the fact that RF radiation is documented in numerous studies to cause oxidative damage and discusses mechanisms for bioeffects (*Low intensity radiofrequency radiation: a new oxidant for living cells* in Oxid Antioxid Med Sci 2014; 3(1):1-3) (<http://www.sciencedirect.com/science/article/pii/S1382668915300594>).

**This case report documents the serious neurological functional impairment that exposure to radiation from wireless technology can cause.** Johansson O and Redmayne M *Exacerbation of demyelinating syndrome after exposure to wireless modem with public hotspot* Electromagnetic Biology and Medicine (<http://dx.doi.org/10.3109/15368378.2015.1107839>).

**The International Commission on Non-Ionizing Radiation Protection (ICNIRP) sets radiofrequency (RF) exposure limits for Europe that are similar to what the IEEE sets for the U.S. According to ICNIRP, FCC guidelines would not be protective for individuals with sensitivities/ impairments from low exposures of RF/MW.** It is a scientific fact that even small amounts of these environmental exposures are harmful to some. ICNIRP stated the following: “*Different groups in a population may have differences in their ability to tolerate a particular NIR (non-ionizing radiation) exposure. For example, children, the elderly, and some chronically ill people might have a lower tolerance for one or more forms of NIR exposure than the rest of the population. Under such circumstances, it may be useful or necessary to develop separate guideline levels for different groups within the general population, but it may be more effective to adjust the guidelines for the general population to include such groups. Some guidelines may still not provide adequate protection for certain sensitive individuals nor for normal individuals exposed concomitantly to other agents, which may exacerbate the effect of the NIR exposure, an example being individuals with photosensitivity.*” from ICNIRP STATEMENT, GENERAL APPROACH TO PROTECTION AGAINST NON-IONIZING RADIATION PROTECTION, (HEALTH PHYSICS 82(4):540-548; 2002) (<https://www.icnirp.org/documents/philosophy.pdf>)

In light of this statement and all the other evidence, it is time that accessibility guidelines for hospitals, medical facilities, and other essential government buildings prohibit the presence of facility provided WiFi and other wireless transmissions within the facility. Medical records, electronic data, and the internet can be accessed perfectly well (and far more securely) using dedicated communication cables. Our doctors office has used electronic records for years which they accessed using direct cabled connections which they plugged their laptop into upon entering the office.

**The Threat to Public Health Posed by Wireless Technology Makes Elimination of Wireless from Public Buildings, Hospitals, Medical Facilities, Schools, and Public Places a Very Reasonable Accommodation**

The following links are of interest in spite of the fact that they relate to public health since they help with understanding that the accommodations needed for people with radiofrequency sickness are actually beneficial for public health. Wireless technology not only restricts accessibility for people with radiofrequency sickness, it jeopardizes public health.

**U.S. National Toxicology Program (NTP)** recently released findings that the radiation utilized by wireless technology is carcinogenic and breaks DNA. A replicated European study found that wireless radiation is also a cancer growth promoter. This excellent article by the Environmental Health Trust (<http://ehtrust.org/science/facts-national-toxicology-program-cellphone-rat-cancer-study/>) provides a good overview of the carcinogenicity findings.

**International Scientists Appeal to U.N. to Protect Humans and Wildlife from Electromagnetic Fields and Wireless Technology** (<http://www.EMFscientist.org>) "Today 190 scientists from 39 nations submitted an appeal to the United Nations, UN member states and the World Health Organization (WHO) requesting they adopt more protective exposure guidelines for electromagnetic fields (EMF) and wireless technology in the face of increasing evidence of risk. These exposures are a rapidly growing form of environmental pollution worldwide."

**Captured Agency: How the Federal Communications Commission Is Dominated by the Industries It Presumably Regulates by Norm Alster.** ([http://ethics.harvard.edu/files/center-for-ethics/files/capturedagency\\_alster.pdf](http://ethics.harvard.edu/files/center-for-ethics/files/capturedagency_alster.pdf)) A damning report reinforcing the contention of the International Scientist Appeal to the U.N. that regulatory agencies and standard-setting boards are not listening to researchers - read why this is happening in the U.S.

**FCC Not Enforcing Existing Inadequate Radiofrequency Limits** A detailed investigation by the EMR Policy Institute showed almost no enforcement of existing FCC RF limits and rampant violations (<http://www.marketwire.com/press-release/-1770139.htm>). A Wall Street Journal investigation (<http://online.wsj.com/articles/cellphone-boom-spurs-antenna-safety-worries-1412293055>) reports similar findings with one in ten towers out of compliance and experts concerned that out of compliance towers could be transmitting in the thermal range by around the end of 2015.

**The International Agency for Research on Cancer (IARC)**, a committee of the World Health Organization, has classified RF radiation, including that emitted by wireless technology, as a class 2B carcinogen. [http://www.iarc.fr/en/media-centre/pr/2011/pdfs/pr208\\_E.pdf](http://www.iarc.fr/en/media-centre/pr/2011/pdfs/pr208_E.pdf).

**"Electromagnetic Radiation, Health and Children 2014"** by Dr. Erica Mallery-Blythe (<https://www.youtube.com/watch?v=sNFdZVeXw7M>) is a must-watch presentation about the hazard that RF radiation emitted by wireless technology poses to children. Dr. Mallery-Blythe does an excellent job of presenting the information in an interesting, coherent, and accessible way, but with enough detail to justify immediate action to minimize children's exposure to radiation from wireless technology.

Department of Interior: **"the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today."** ([http://www.ntia.doc.gov/files/ntia/us\\_doi\\_comments.pdf](http://www.ntia.doc.gov/files/ntia/us_doi_comments.pdf))

#### **RF radiation disrupts the endocrine system:**

- Eskander EF, Estefan SF, Abd-Rabou AA. How does long term exposure to base stations and mobile phones affect human hormone profiles? Clinical Biochemistry 45 (2012) 157–161

**RF radiation alters heart electrical activities and causes ventricular enlargement in rats.**

Additionally, “The histopathological examination revealed hypertrophy, fragmentation and vacuolation of the myocardium, which were directly proportional to the exposure time.” Fatma A. Mohamed, Azza A. Ahmed, Bataa M.A. El- Kafoury, & Noha N. Lasheen. **Study Of The Cardiovascular Effects Of Exposure To Electromagnetic Field**. Life Science Journal. 2011;8(1):260-274. These findings have enormous implications for cardiac health in a chronically RF exposed population.

Catherine Kleiber

December 15, 2016

Dear Ms. Walker,

Thank you for your attention to my comments. My main interest in critiquing the FirstNet PEIS documents is making sure that the environmental and health effects of the radiofrequency (RF) radiation that the wireless component of FirstNet will emit are appropriately factored into decisions about how to implement FirstNet. I address the serious deficiencies below. (Page numbers listed originate from Volume 1 Chapter 2 Draft Programmatic Environmental Impact Statement for the Central United States, but the critique should be broadly applicable to the RF radiation section for all four regions.)

There were seriously inaccurate statements made about the safety level assured by existing FCC RF radiation limits:

- p. 2-10 “For 20 years, the regulatory levels for human exposure to RF emissions have been established by the FCC as a means of protecting both workers and the general public from any potential effects.”
- p. 2-12 “These limits are based on thermal effects (i.e., the amount of RF energy required to heat tissue). According to the FCC, the established limits are well below levels that are considered to have adverse health effects.”

Other government officials dispute claims such as these that FCC RF radiation limits provide sufficient population-based protection from harm during continuous exposures. The Department of Interior (DOI) said “**the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today**” ([http://www.ntia.doc.gov/files/ntia/us\\_doi\\_comments.pdf](http://www.ntia.doc.gov/files/ntia/us_doi_comments.pdf)), clearly indicating that they do not consider FCC RF radiation limits to be “protecting both workers and the general public from any potential effects” as the PEIS states.

Mr. Norbert Hankin from the Center for Science and Risk Assessment, Radiation Protection Division, EPA, makes it clear in his correspondence with the EMR Policy Institute that “The FCC's current exposure guidelines, as well as those of the Institute of Electrical and Electronics Engineers (IEEE) and the International Commission on Non-ionizing Radiation Protection, **are thermally based, and do not apply to chronic, nonthermal exposure situations**. They are believed to protect against injury that may be caused by acute exposures that result in tissue heating or electric shock and burn. The hazard level (for frequencies generally at or greater than 3 MHz) is based on a specific absorption dose-rate, SAR, associated with an effect that results from an increase in body temperature. The FCC's exposure guideline **is considered protective of effects arising from a thermal mechanism but not from all possible mechanisms**. Therefore, the generalization by many that the guidelines protect human beings from harm by any or all mechanisms is not justified.” (emphasis added) ([http://www.emrpolicy.org/litigation/case\\_law/docs/noi\\_epa\\_response.pdf](http://www.emrpolicy.org/litigation/case_law/docs/noi_epa_response.pdf)) This very credible evidence is unmentioned and ignored.

As Mr. Hankin makes plain above, the FCC RF radiation limits are not protective from all adverse effects only those from thermal mechanisms during acute exposures, so the second sentence of the quote

from the PEIS (p 2-12), and copied above, is an implicit lie. Whether this is intentional or inadvertent, it should be corrected. FCC RF radiation limits are based on thermal effects in a large male. They are not population-protective. They do not and were never intended to protect from biological effects or even thermal effects during the chronic exposures we all experience today and which FirstNet would increase.

Even ICNIRP acknowledges the need to adjust their RF radiation guidelines (referred to here as NIR): *“Different groups in a population may have differences in their ability to tolerate a particular NIR (non-ionizing radiation) exposure. For example, children, the elderly, and some chronically ill people might have a lower tolerance for one or more forms of NIR exposure than the rest of the population. Under such circumstances, it may be useful or necessary to develop separate guideline levels for different groups within the general population, but it may be more effective to adjust the guidelines for the general population to include such groups. Some guidelines may still not provide adequate protection for certain sensitive individuals nor for normal individuals exposed concomitantly to other agents, which may exacerbate the effect of the NIR exposure, an example being individuals with photosensitivity.”* from ICNIRP STATEMENT, GENERAL APPROACH TO PROTECTION AGAINST NON-IONIZING RADIATION PROTECTION, (HEALTH PHYSICS 82(4):540-548; 2002) <https://www.icnirp.org/documents/philosophy.pdf>

After the release of the U.S. National Toxicology Program (NTP) findings showing that non-thermal RF radiation exposures cause DNA breakage and cancer, the Institute for Electrical and Electronics Engineers (IEEE) posted an article with comments from Kenneth Foster of the IEEE committee that reviews RF radiation exposure limits:

*With the NTP study results, Foster expects more governments to put out [cautionary guidelines](#) and radiation labeling for cellphones. He says he wouldn't be surprised if [California](#) adds RF radiation to its [Proposition 65](#) list of carcinogenic chemicals, and if the IARC ups its [classification rating](#) from 2B: possibly carcinogenic to humans to 2A: probably carcinogenic to humans. “And they wouldn't be out of line in doing that,” he says. “This is going to change the rhetoric in the field. People can point to much more hard evidence that [cellphone RF exposure] really is a problem.”* (<http://spectrum.ieee.org/the-human-os/biomedical/ethics/cellphone-radiation-causes-cancer-in-rats>)

The omission of the U.S. NTP findings from the PEIS RF radiation section is a very serious one and should be remedied. FirstNet cannot argue the U.S. National Toxicology Program is not a sufficiently reputable.

P. 2-18 “However, the BWG [BioInitiative Working Group] itself has been criticized by other scientific, professional, and governmental bodies for ignoring conflicting, inconsistent, or other credible evidence that clashed with its report (e.g., (Dolan, M. and J. Rowley, 2009)).” The BioInitiative Working Group, a group of researchers and public health experts, are criticized in this quote with attribution to a paper written by representatives of telecom industry interest groups. This is analogous to dismissing the body of research on the health effects of tobacco, asbestos, or lead paint due to a critique by industry representatives. This was done for years and we have now seen what a mistake it was to allow it. Hundreds of thousands of people lost their lives due to the regulatory delays that resulted from allowing industry to dismiss research critical of it. This article is not different. If its opinions warrant inclusion in the PEIS at all, they should be clearly attributed as representing the telecom industry. This was definitely not done.

On p. 2-12, studies are cited as finding that even with roof-top antennas, measurements inside those buildings are low compared to FCC limits, scant comfort since we already established that the government knows that the FCC limits are “...**now nearly 30 years out of date and inapplicable today.**”

Discussion about findings of widespread violations of FCC limits are omitted from the discussion, but are highly relevant and should be included. A detailed investigation by the EMR Policy Institute showed almost no enforcement of existing FCC RF radiation limits and rampant violations (<http://www.marketwire.com/press-release/-1770139.htm>). A Wall Street Journal investigation (<http://online.wsj.com/articles/cellphone-boom-spurs-antenna-safety-worries-1412293055>) reports similar findings with one in ten towers out of compliance and experts concerned that out of compliance towers could be transmitting in the thermal range by around the end of 2015.

The fact that the FCC is incredibly lax, even negligent, in taking regulatory action even when violations are reported, never mind going out and conducting unannounced spot inspections, should be of great concern and should be a factor considered in the PEIS.

Additionally, these studies are old and date to a time when few people used wireless in many areas and there were many fewer antennas. One major failing of the FCC limits that merits discussion in the PEIS is the fact that they govern each antenna separately. Collocations result in much higher RF radiation levels around the site because each antenna still broadcasts at the same level as if there were no collocation. Transmission from other antenna sites and mobile devices further increase ambient exposure levels. This must be discussed in the PEIS as an environmental impact since the purpose of the broadband provision portion of FirstNet’s mission mentioned on p. 2-8 is to encourage the use of wireless technology which will in turn increase the ambient RF radiation levels from both devices and base station antennas. In the example on p. 2-14, each antenna produces a field of  $477\mu\text{W}/\text{m}^2$  at ground level, but collocation of 4 such arrays (which is not uncommon) would result in  $1,908\mu\text{W}/\text{m}^2$  at ground level. This is still below the FCC RF radiation limits, but which we established above are outdated and meaningless according to the DOI and not protective in chronic exposure situations according to the EPA. Even  $477\mu\text{W}/\text{m}^2$  exceeds levels shown in studies to cause biological effects, specifically negative effects related to sleep, stress, immune function, brain cancer, breakage of the blood-brain barrier, other cancers, reproduction, and oxidative damage. A ground level of  $1,908\mu\text{W}/\text{m}^2$  exceeds levels shown in studies to cause heart effects and calcium metabolic effects (<http://emfsafetynetwork.org/wp-content/uploads/2013/08/Biological-Effects-From-RF-Radiation-and-Implications-for-Smart-Meters-June-5-2013-2.pdf>). Thus, surrounding areas will certainly be exposed to high enough RF radiation levels on the ground to cause serious biological effects. RF radiation levels in portions of neighboring buildings elevated above ground level are likely to be even higher.

On p. 2-11, there is a list of “Some of the major problems with demonstrating cause and effect for RF” which seem to be cited as excusing FirstNet from an obligation to take action to protect the public and the environment. Each point is addressed below.

*“No consistent measures of exposure. Exposure is changing with the proliferation of cell phone use, and there is no real unexposed or “control” population (Ahlbom et al., 2004) (Khurana et al., 2010)”*

While the absence of a control population cannot be used to justify inaction, it does support the high level of urgency to making sure that public health policy and regulations related to RF radiation exposure are sufficiently protective since **everyone is exposed**. Exact continuity of exposure

measurement is not necessary between studies as long as care has been used within each study to be consistent. Studies show that RF radiation has very serious biological effects at levels far below existing FCC RF radiation limits. Below are some examples of serious clinically important biological effects resulting from real-life RF radiation exposures:

**Cardiac arrhythmias can be caused by wireless technology.** Recent replicated double blind studies show that a cordless phone base station operating at WiFi frequencies can cause cardiac arrhythmias in susceptible individuals. This short video discusses the cardiac effect that wireless can have- <http://www.youtube.com/watch?v=EI9fZX4iww>. View this video <http://www.youtube.com/watch?v=sv1E9IXUd6M> to see further discussion. You can read the studies at <http://www.magdahavas.com/wordpress/wp-content/uploads/2012/01/Havas-HRV-Ramazzini.pdf> and <http://www.ncbi.nlm.nih.gov/pubmed/23675629#>. Obviously, for susceptible people (like those of us with radiofrequency sickness), WiFi can make whole buildings inaccessible and unsafe. A recent study in rabbits found that not only did WiFi change heart function parameters, but it dramatically changed the cardiac effects of both dopamine and epinephrine: Saili L, et al. *Effects of acute exposure to WIFI signals (2.45 GHz) on heart variability and blood pressure in Albinos rabbit*. Environmental Toxicology and Pharmacology 40 (2015) 600–605. A mouse cardiac study showed that mice exposed to RF radiation from a cellphone had significantly lower vitamin D levels, low calcium, low antioxidant capacity, low cardiac tissue MDA and elevated renin levels compared to controls. They also had enlarged left ventricles and ECG abnormalities (Fatma 2011). Both these cardiac effects are pre-disposing factors toward cardiac arrest. Obviously, these serious cardiac effects caused by RF radiation exposures from consumer devices ought to be discussed in the PEIS, since FirstNet will be promoting their use and emitting radiation levels from its antennas comparable to these exposures.

**Cancer levels around antennas are elevated** and FirstNet will either be elevating already heightened risks by adding collocation antennas, increasing emissions of existing antennas by increasing use, or putting up new towers and increasing cancer risk in those around them. This should be discussed in the PEIS. “*The Influence of Being Physically Near to a Cell Phone Transmission Mast on the Incidence of Cancer*” ([http://emrstop.org/index.php?option=com\\_docman&task=doc\\_details&gid=4&Itemid=18](http://emrstop.org/index.php?option=com_docman&task=doc_details&gid=4&Itemid=18)) found significant increases in cancer risk at RF radiation levels below FCC RF radiation limits. Other studies have as well. These merit serious consideration in the FirstNet PEIS and should not be omitted. Anything that will increase cancer risk for a large segment of the population should be considered very carefully. A review by Dr. Cherry (2000). Criticism of the Health Assessment in the ICNIRP Guidelines for Radiofrequency and Microwave Radiation (100 kHz- 300 GHz) [www.electricalpollution.com/documents/Cherry2000EMR\\_ICNIRP\\_critique\\_09-02.pdf](http://www.electricalpollution.com/documents/Cherry2000EMR_ICNIRP_critique_09-02.pdf) discusses common errors in understanding about RF radiation exposures and studies and is, as its title states a criticism of ICNIRP.

**Radiofrequency radiation exposure causes important endocrine changes.** “*Changes of Clinically Important Neurotransmitters under the Influence of Modulated RF Fields- A Long-term Study under Real-life Conditions*” ([http://www.radiationresearch.org/images/RRT\\_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2029%20July%202011.pdf](http://www.radiationresearch.org/images/RRT_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2029%20July%202011.pdf)) is an important study documenting hormonal changes in residents before installation of a cellphone antenna and for a year and a half afterward. They found initial hormone level increases consistent with a stress response to RF radiation exposure levels as low as 60μW/m<sup>2</sup>. Initially adrenaline and noradrenaline increased and dopamine and phenylethylamine (PEA) levels decreased. While adrenaline and noradrenaline did decrease, dopamine and PEA levels never returned to pre-base station levels, remaining substantially lower during the year and a half of the study. According to the authors “This is of considerable clinical relevance because psychiatric symptoms also exhibit altered PEA levels. In

Rimbach, the increase in sleep problems, cephalgia, vertigo, concentration problems, and allergies could be clinically documented after the cell phone base station had been activated. The newly developed symptoms can be explained clinically with the help of disturbances in the humoral stress axis.” These long-term debilitating effects of cell towers must be mentioned in the PEIS and weighed in the decision making about how to move forward with FirstNet.

*“How does long term exposure to base stations and mobile phones affect human hormone profiles?”* Eskander et al. (<http://www.sciencedirect.com/science/article/pii/S0009912011027330>) is a very important study which documented hormonal changes occurring over time with chronic exposures to base station antennas or cell phones. It is extremely important that ACTH, cortisol, and T4 were significantly reduced in exposed individuals compared to controls. So were testosterone, progesterone, and prolactin. These effects became more pronounced over time. Endocrine disruption is extremely important clinically and should be considered as an extremely negative effect of the planned wireless portion of FirstNet. It should not be omitted from the FirstNet PEIS.

*“No scientifically agreed upon biological mechanism for harm. The lack of a clear biological mechanism increases uncertainty into whether the health end point that the study examined is the correct endpoint to try and measure (Hauri et al., 2014) (Ahlbom et al., 2004)”*

Agreed upon by whom? The telecom industry? There are two mechanisms by which RF radiation produces biological effects that are currently well-supported by research literature.

**One is oxidation caused by RF radiation exposure** (<http://www.ncbi.nlm.nih.gov/pubmed/26151230>). Oxidation can occur even with non-ionizing radiation exposure. At least 93 studies have now found that RF radiation has oxidative effects. Oxidation has important biological effects. Yakymenko states “In addition, ROS at relatively low concentrations can modulate inflammation via activation of NF-kB pathway (Hayden and Ghosh, 2011). Therefore, even subtle exposures to RFR with generation of hardly detectable quantities of free radicals can have their meaningful biological consequences.” This is because “free radicals/ROS are an intrinsic part of the cellular signaling cascades.” Increasing population-wide exposure to an unavoidable oxidant will have profound effects on public health and the environment and should be discussed and weighed appropriately in the FirstNet PEIS.

**The second is the ability of non-thermal levels of RF radiation to cause voltage-gated  $\text{Ca}^{2+}$  ion channels to open inappropriately.** This can have profound and detrimental biological effects because  $\text{Ca}^{2+}$  is utilized in many cellular and intercellular systems as a messenger, meaning that when the voltage-gated  $\text{Ca}^{2+}$  ion channel opens inappropriately it sets off a cascade that affects metabolic activities within the cell or body.

Not only is  $\text{Ca}^{2+}$  efflux well-documented in the literature, but a reasonable mechanistic explanation for how very low RF radiation levels can cause voltage-gated  $\text{Ca}^{2+}$  channels to open is elucidated by Dr. Martin Pall in *Electromagnetic Fields Act Similarly in Plants as in Animals: Probably Activation of Calcium Channels via Their Voltage Sensor*, *Current Chemical Biology*, 2016, Vol. 10, No. 1., as follows:

*“The voltage sensor opens the ion channel due to the action of changes in the electrical force across the plasma membrane acting directly on these 20 voltage sensor charges [8]. The structure of the VGCC voltage sensor is discussed in more detail in the Discussion section below. It is plausible, therefore, that*

*the electrical forces of these low intensity EMFs act through their electrical effects on the voltage sensor to activate the VGCCs. It is predicted that the forces on the 20 charges in the VGCC voltage sensor are highly amplified because of two important factors [2]. The law of physics called Coulomb's law predicts that forces on charged groups are inversely proportional to the dielectric constant of the medium in which the charges occur. Because the dielectric constant of the aqueous phases in the cell or extra-cellular medium are about 120 times higher than the dielectric constant of the lipid bilayer [2], this predicts that forces on the each of the 20 charges of the voltage sensor are about 120 times higher than are electrical forces on singly charged groups in the aqueous phases. In addition, Sheppard et al. [10], predicted that the electrical forces produced by EMFs across the plasma membrane are amplified about 3000-fold compared with the forces in the aqueous phases because of the high electrical resistance of the plasma membrane. It follows from this, that the forces on the voltage sensor are estimated to be vastly increased as compared with forces on aqueous phase single charges, where most if not all charged groups occur:*

*20(# of charges in voltage sensor) X 120 (from the dielectric constant) X 3000 (amplification at the plasma membrane) = 7.2 million*

*Because of this, the electrical forces placed on the voltage sensor by these EMFs is calculated to be approximately 7.2 million times higher than are the forces placed on singly charged groups located elsewhere in the cell because these singly charged groups are predominantly in the aqueous phase [2]. It is highly plausible, therefore, that this extraordinary sensitivity of the voltage sensor to such weak electrical effects is the final answer to this long puzzle of how such low intensity EMFs can produce biological effects in many animals, including humans.”*

This important mechanism explains many of the biological effects RF radiation can have at levels far below the outdated FCC RF radiation limits and far below the levels that FirstNet would emit. Obviously this should be discussed in the PEIS and provides reasons for modifying the execution of FirstNet.

*“Some potential effects of major concern are rare, such as brain cancer and acoustic neuroma, both of which have been potentially linked to RF exposure. If the health outcome is rare, it is even harder to demonstrate cause and effect (Ahlbom et al., 2004).”*

Even rare effects are significant when the whole population is being exposed to the causal agent. The early study cited here likely contain gross underestimates of the effect of RF radiation exposure on brain cancers and acoustic neuroma due to the long latencies normally involved in brain cancers (30-40 years). That studies are already finding effects should highlight the truly dangerous nature of RF radiation as a carcinogen. The U.S. NTP study should be discussed here. It found that non-thermal levels of RF radiation break DNA (considered the hallmark of a carcinogen) and increases the risk of glioma of the brain and heart (<http://ehtrust.org/science/facts-national-toxicology-program-cellphone-rat-cancer-study/>). Furthermore, rates of Glioblastoma Multiforme, a type of glioma, is increasing 1.3%-2.3% per year over a 15-year period, which was statistically significant (<http://microwavenews.com/news-center/ntp-and-brain-tumor-rates>). Thus, controlled lab studies and epidemiological findings are in agreement. A replicated European study found that RF radiation promotes cancer growth, supporting the carcinogenicity of RF radiation (Lerchl, et. al., 2015 <http://www.ncbi.nlm.nih.gov/pubmed/25749340>). Exposures were non-thermal and well-below existing FCC RF radiation limits. These findings, especially taken together, should carry a lot of weight and strongly suggest the need for precaution,

especially with the studies above showing that cellular base station antennas cause increases in cancer. They must be included in the Firstnet PEIS.

Research findings are sufficiently strong now related to carcinogenicity that former IARC panelists like Dr. Dariusz Leszczynski warn that RF-EMF should be classified as a Group 2A carcinogen, and Dr. Lennart Hardell reports that several studies indicate a Group 1 classification is justified, placing RF-EMF in the same category as tobacco, asbestos, and benzene.

Dr. Dariusz Leszczynski MSc, DSc, PhD <https://betweenrockandhardplace.wordpress.com/2014/08/14/carcinogenicity-of-cell-phone-radiation-2b-or-not-2b/>

*“In conclusion, I consider that currently the scientific evidence is sufficient to classify cell phone radiation as a probable human carcinogen – 2A category in IARC scale. Time will show whether ‘the probable’ will change into ‘the certain’. However, it will take tens of years before the issue is really resolved. In the mean time we should implement the Precautionary Principle. There is a serious reason for doing so.”*

Dr. Lennart Hardell MD, PhD <http://www.ncbi.nlm.nih.gov/pubmed/24192496>

*“Based on the Hill criteria, glioma and acoustic neuroma should be considered to be caused by RF-EMF emissions from wireless phones and regarded as carcinogenic to humans, classifying it as group 1 according to the IARC classification. Current guidelines for exposure need to be urgently revised.”*

These opinions are important because these researchers were among the IARC panelists that decided in 2013 only to classify RF radiation as a class 2B carcinogen and now they consider the evidence significant enough to warrant changing the classification to “probably carcinogenic” or even carcinogenic. The U.S. NTP study results have been released since these statements were made, probably further weighting them in the direction of carcinogenicity. These factors should definitely be discussed in the PEIS. They should also have real influence over whether the scope of the FirstNet project should be adjusted.

On pages 2-19 to 2-20 serious effects of RF radiation and RF infrastructure are discussed and dismissed in a bizarre manner. Nine studies showing harm to bird populations via a variety of mechanisms are discussed, including reproductive failure. Then two laboratory studies showing reproductive failure in chickens are discussed *“Laboratory studies conducted with domestic chicken embryos have shown that emissions at the same frequency and intensity as that used in cellular telephones have appeared to result in death (DiCarlo et al., 2002) (Manville II, A., 2007).”* Then the idea that these studies show that low level RF radiation emissions support the findings in the environmental studies is ridiculed because *“given the controlled nature of the studies and potential exposure differences in the wild, this causation is left to interpretation and extrapolation.”* This is a case where bird epidemiological findings and bird lab studies are in agreement. Thus, the evidence show that towers affect birds negatively, at least reproductively. This should be given great weight. FirstNet should be adjusting its plans accordingly.

### **RF radiation kills and damages trees**

Very little attention is paid to tree studies. This is an egregious oversight. We rely on trees for the very health of our planet. Trees are being killed and damaged across the U.S. and world-wide by RF radiation even without full-scale implementation of either FirstNet or 5G . RF radiation is being implicated as the cause. Several studies show the very serious effects that RF radiation has on the health of trees. Trees are essential to the welfare of the global environment and the continuation of the human race. They

convert carbon dioxide into oxygen for us and purify our air. These are essential services. They also cool and provide shade in our cities and countryside. Additionally, they provide important wildlife habitat. Decimation of the Amazon rainforest by direct human actions has been oft-cited as endangering the global environment. FirstNet should not be moving forward with plans to increase RF radiation exposure in urban or rural areas since it will hasten the RF radiation-induced death of our urban and rural forests. We cannot afford additional forest die-off. Large mature trees are being seriously damaged and killed, this damage will take 50 years or more to repair. The references listed below clearly show that RF radiation has detrimental effects on tree health at levels far below the outdated FCC RF radiation limits.

- Radiofrequency radiation injures trees around mobile phone base stations [https://www.researchgate.net/publication/306435017\\_Radiofrequency\\_radiation\\_injures\\_trees\\_around\\_mobile\\_phone\\_base\\_stations](https://www.researchgate.net/publication/306435017_Radiofrequency_radiation_injures_trees_around_mobile_phone_base_stations)
- Adverse Influence of Radio Frequency Background on Trembling Aspen Seedlings: Preliminary Observations <https://www.hindawi.com/journals/ijfr/2010/836278/>
- Tree damage in the vicinity of mobile phone base stations <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/06/Tree-damages-in-the-vicinity-of-mobile-phone-base-stations.pdf>
- The trees make it easy to recognize the effects of RF-EMF. Examples of tree damage: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/09/Trees-in-Bamberg-and-Hallstadt-Dokumentation-2006-2016.pdf>

The damage to trees is not theoretical. We are seeing it on our farm now. We have seen it in the city for years, but now we are seeing it in the country as well, on a widespread basis. Please see attached file. The damage is becoming serious and widespread. The nation's trees cannot survive continued chronic increases in RF radiation levels such as FirstNet would bring through direct infrastructure-induced increases and increases caused by increased utilization and greater numbers of devices.

Please read the following reports which demonstrate that wireless technology is causing serious harm to wildlife:

“The Report on Possible Impacts of Communication Towers on Wildlife Including Birds and Bees” commissioned on 30th August 2010 by the Ministry of Environment and Forest, Government of India [http://www.moef.nic.in/downloads/public-information/final\\_mobile\\_towers\\_report.pdf](http://www.moef.nic.in/downloads/public-information/final_mobile_towers_report.pdf)

“Impacts of radio-frequency electromagnetic field (RF-EMF) from cell phone towers and wireless devices on biosystem and ecosystem – a review” [http://www.biolmedonline.com/Articles/Vol4\\_4\\_2012/Vol4\\_4\\_202-216\\_BM-8.pdf](http://www.biolmedonline.com/Articles/Vol4_4_2012/Vol4_4_202-216_BM-8.pdf)

Balmori, A. “Electromagnetic pollution from phone masts. Effects on wildlife,” Pathophysiology (2009), doi:10.1016/j.pathophys.2009.01.007 <http://www.ncbi.nlm.nih.gov/pubmed/19264463>

The Supreme Court of India ordered cell towers removed from schools, colleges, hospitals and playgrounds in Rajasthan because of radiation being “hazardous to life.” The court’s amazing 200+ page decision thoroughly reviews the worldwide evidence that cell towers are harming human beings

and wildlife (<http://timesofindia.indiatimes.com/city/jaipur/No-mobile-towers-near-schools-hospitals-directs-Rajasthan-HC/articleshow/17399705.cms>).

On July 5, 2013 the Supreme Court of India upheld this decision.

None of these are mentioned in the PEIS. They are of great relevance.

The PEIS also did not mention the fact that increasing RF radiation exposure would increase RF radiation-induced functional impairments, violating the rights of those already experiencing serious effects from RF radiation (RF radiation sickness - see [http://www.magdahavas.com/wordpress/wp-content/uploads/2010/08/Dodge\\_1969.pdf](http://www.magdahavas.com/wordpress/wp-content/uploads/2010/08/Dodge_1969.pdf)). Furthermore, FirstNet would be in violation of the 2008 ADA Amendments, causing further exclusion from society and greater levels of disability for those already experiencing RF radiation sickness and increasing the numbers of people developing RF radiation sickness since it is caused by chronic over exposure to RF radiation. The only cure for RF radiation sickness is avoiding exposure and the wireless broadband portion of FirstNet would make that virtually impossible. I have attached a comment I made to The National Institute on Disability, Independent Living and Rehabilitation Research (NIDILRR) regarding the need for the elimination of wireless from public places, public buildings, and medical facilities. Numerous other people also made comments. My comment also has relevance for ensuring that wired FirstNet infrastructure does not cause additional disability by causing “dirty” electricity. I hope that FirstNet will steps to ensure that its systems do not cause “dirty” electricity.

As noted on p. 2-12, in 1996 the FCC was given the responsibility to “prescribe and make effective rules regarding the environmental effects of radio frequency emissions” (TCA, 104 Pub. L. 104), obviously it has not done this, as discussed above the rules are outdated and inapplicable. The FCC is in the process of updating them so the common practice of relying on compliance with FCC RF radiation limits as being sufficient for protection of health and the environment must end (see p.2-12). As discussed previously, until the FCC completes revision of the FCC RF radiation limits so that they are population-based biologically-protective RF radiation limits the FCC is in violation of their Congressional delegated responsibility to adopt “uniform, consistent requirements, with adequate safeguards of the public health and safety” these were to be “established as soon as possible” (H.R. Report No. 104-204, p. 94). Unfortunately, it appears that the undue industry influence at the FCC documented in a report published by Harvard ([http://ethics.harvard.edu/files/center-for-ethics/files/capturedagency\\_alster.pdf](http://ethics.harvard.edu/files/center-for-ethics/files/capturedagency_alster.pdf)), may have compromised the agency’s ability to promptly revise its RF radiation safety limits.

The need for biologically-based RF radiation safety limits is supported by the RF/EMF research community. Over 220 scientists have signed an appeal to the UN ([www.emfscientist.org](http://www.emfscientist.org)).

The need for FirstNet to do its own due diligence is supported by case law. In *Massachusetts v. E.P.A.*, 549 U.S. 497 (2007) Justice Stevens wrote for the majority that agencies cannot ignore Congresses command to regulate. Thus, the fact that FCC has abrogated its duty to maintain protective up-to-date RF radiation limits does not excuse FirstNet from having to consider the serious health and environmental consequences of its program in the PEIS and find a reasonable alternative to protect public health and the environment. In *Scenic Hudson Preservation Conference v. Federal Power Commission*, 354 F.2d 608 (2d Cir. 1965), cert. denied 384 U.S. 941 (1966), on appeal the Circuit Court pointed out (at p. 620) that Congress gave the FPC a broader responsibility.

The Scenic Hudson Court noted “In this case, as in many others, the Commission has claimed to be the representative of the public interest. This role does not permit it to act as an umpire blandly calling balls and strikes for adversaries appearing before it; the right of the public must receive active and affirmative protection at the hands of the Commission.” This decision has obvious applicability to the need for FirstNet to act proactively to protect the health of the American people, as well as the environmental health, not just do a *pro forma* PEIS without real consideration of the great potential for harm that a portion of the FirstNet program has.

Given both the serious inadequacy of the FCC RF radiation limits and the potential for serious harm to public health and the environment that can result if FirstNet implements the program as originally envisioned, FirstNet needs to take steps to amend the program to prevent that harm.

### **Recommended reasonable modifications to FirstNet:**

FirstNet must inform Congress of the health and environmental hazard posed by the RF radiation emission required for wireless broadband and request Congress to eliminate provision of wireless broadband internet from FirstNet's mission. As discussed earlier in this document, it is now acknowledged by government agencies, particularly the Department of Interior and the Environmental Protection Agency that the FCC RF radiation limits are not protective of the public during the chronic exposures experienced today. Furthermore, the U.S. National Toxicology Program has found that RF radiation damages DNA and causes cancer. These are sufficient reasons to halt the portion of the FirstNet Program aimed at increasing wireless broadband coverage and usage. Increasing wired, cabled, and fiber optic access to broadband could be substituted instead. Thereby, achieving a comparable result without causing public health or environmental problems.

For the same reasons, FirstNet should delay implementation of the wireless first responder's component until they design a system that provides good interoperable first responder communication while minimizing radiofrequency emissions from antennas and first responder's communicators. Thus, communicators should be able to contact each other directly, not require an outside antenna (certain types of buildings might make communication to an outside antenna impossible anyway), but also be able to utilize it if needed and available. Radiofrequency emissions should not occur continuously, only as needed.

FirstNet should request that the NTP quickly undertake and complete toxicology studies comparing the different communication technologies, including, but not necessarily limited to, 3G, 4G, and 5G LTE technologies so that FirstNet can utilize the least toxic least biologically active technology for its first responder's interoperable communication system. Oxidative parameters and calcium efflux should be among the measures used.

Please make the necessary modifications to all the FirstNet Draft PEIS documents. Please also make the next versions more readily available. You should, for instance, include links to the different sections on your website so they can be readily located and downloaded.

Thank you.

Sincerely,

Catherine Kleiber

## RF Radiation From Wireless Technology Kills and Damages Trees By Catherine Kleiber

Trees are being killed and damaged across the U.S. and world-wide even without full-scale implementation of 5G. RF radiation is being implicated as the cause. Several studies show the very serious effects that RF radiation has on the health of trees. Trees are essential to the welfare of the global environment and the continuation of the human race. Decimation of the Amazon rainforest by direct human actions has been oft-cited as endangering the global environment, the FCC should not be moving forward with implementing a technology, 5G wireless technology, that will hasten the RF caused death of our urban and rural forests. Please read the following papers to see the toll RF is already taking on trees. We cannot afford additional forest die-off. Large mature trees are being seriously damaged and killed, this damage will take 50 years or more to repair.

- Radiofrequency radiation injures trees around mobile phone base stations [https://www.researchgate.net/publication/306435017\\_Radiofrequency\\_radiation\\_injures\\_trees\\_around\\_mobile\\_phone\\_base\\_stations](https://www.researchgate.net/publication/306435017_Radiofrequency_radiation_injures_trees_around_mobile_phone_base_stations)
- Adverse Influence of Radio Frequency Background on Trembling Aspen Seedlings: Preliminary Observations <https://www.hindawi.com/journals/ijfr/2010/836278/>
- Tree damage in the vicinity of mobile phone base stations <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/06/Tree-damages-in-the-vicinity-of-mobile-phone-base-stations.pdf>
- The trees make it easy to recognize the effects of RF-EMF. Examples of tree damage: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/09/Trees-in-Bamberg-and-Hallstadt-Dokumentation-2006-2016.pdf>

The damage to trees is not theoretical. We are seeing it on our farm now. We have seen it in the city for years, but now we are seeing it in the country as well, on a widespread basis.

July 24, 2016  
Note thinness in tree on right and bare spot developing between trees (both cottonwoods)

September 12, 2016

August 9, 2016  
Damage progressing quickly

July 24, 2016

These cottonwoods trees began exhibiting damage similar to the trees above in 2015. Most of them greened up this spring, then had the leaves die and drop. Two still retain leaves low down. Others are completely dead.

As you can see the damage to trees is progressing quickly to death. Balimori discusses the fact that *"White and black poplars (Populus sp.) and willows (Salix sp.) are more sensitive. There may be a special sensitivity of this family exists or it could be due to their ecological characteristics forcing them to live near water, and thus electric conductivity."* Certainly the trees that are worst off in our area are willows and cottonwoods and they are growing in areas that are wet, but I have seen trees of all types exhibiting damage. Please think of the future. We cannot live without a healthy tree population. We rely on them for the very oxygen we breathe. **No technology is worth endangering something as essential as our source of oxygen.**

September 18, 2016  
Notice uneven leaf drop, unhealthy  
green, and absence of fall color.  
Characteristic of RF damage

Notice necrotic lesions and off color  
characteristic of RF leave damage.  
No normal fall color present, despite  
on-going leaf drop.

Note the small damaged leaves  
across the top of the tree. Trees of  
all different species around our yard  
are demonstrating this damage. Also  
mentioned in the aforementioned  
papers. We own no transmitters so  
all RF from outside sources.

Lilac showing marked one sided damage. Signal appears to be coming from a WiFi tower on a hill about a mile away.

**Green lilac nearly touching green side of affected lilac. The bases are only 8 ft apart.  
0.6 microwatts/m2 max  
no audible or visible spikes in over 5 minutes**

**Green side of lilac  
2.8 microwatts/m2 max  
only periodic audible or visible spikes**

**Bare side of lilac  
83.5 microwatts/m2 max  
audible and visible spikes every 9 seconds**

39 microwatts/m<sup>2</sup> max

**Subject:** Urgent: Comment on FirstNet Draft Environmental Impact Statements

**I would like to re-butt your arguments based on personal experience and studies regarding your FirstNet Draft Environmental Impact Statements.**

Please see attached two documents below:

**I would like to re-butt your arguments based on personal experience and studies regarding your FirstNet Draft Environmental Impact Statements.**

I also am requesting that Congress eliminate your provision of wireless broadband internet from FirstNet's mission and:

Delay implementation of wireless first responder's component until they design a system that provides good interoperable first responder communication while minimizing radiofrequency emissions from antennas and first responder's communicators

- Cancer findings with radios in first responders

- Cancer findings from cellphone radiation from NTP - <http://ehtrust.org/science/facts-national-toxicology-program-cellphone-rat-cancer-study/>

Thus, communicators should be able to contact each other directly, not require an outside antenna (certain types of buildings might make communication to an outside antenna impossible anyway), but also be able to utilize it if needed and available. Radiofrequency emissions should not occur continuously, only as needed.

**There is direct evidence of human and environmental harm with thousands of modern studies that trump the old ones. Please read through the list of critiques below for a list of some of the most problematic points and omissions.**

We (and the Department of Interior) were successful in getting FirstNet to complete a Programmatic Environmental Impact Statement (PEIS).

The Central Region document is available at the following site:

<https://www.regulations.gov/document?D=FIRSTNET-2016-0003-0001>

The East Region

<https://www.regulations.gov/document?D=FIRSTNET-2016-0002-0001>

The South region is available for review and comment at the following link:

<https://www.regulations.gov/document?D=FIRSTNET-2016-0005-0001>

West Region

<https://www.regulations.gov/document?D=FIRSTNET-2016-0004-0001> or

<https://www.regulations.gov/docketBrowser?rpp=25&so=DESC&sb=commentDueDate&po=0&D=FIRSTNET-2016-0004>

The documents are huge, **however the RF portion is tiny**. It is not dealt with throughout the documents. It seems to be in 2.4 which I believe means Chapter 2 section 4 for the two PEIS documents that I was able to obtain.

**Here are my critiques:**

RF health risks to workers, the population, and the environment are not addressed throughout the document - they are isolated to the RF section and quickly dismissed.

*“The Influence of Being Physically Near to a Cell Phone Transmission Mast on the Incidence of Cancer”*

([http://emrstop.org/index.php?option=com\\_docman&task=doc\\_details&gid=4&Itemid=18](http://emrstop.org/index.php?option=com_docman&task=doc_details&gid=4&Itemid=18))

*“Changes of Clinically Important Neurotransmitters under the Influence of Modulated RF Fields- A Long-term Study under Real-life Conditions”* ([http://www.radiationresearch.org/images/RRT\\_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2029%20July%202011.pdf](http://www.radiationresearch.org/images/RRT_articles/Buchner%20Eger%20Rimbach%20Study%202011%20ENG%20FINAL%20Revised%2029%20July%202011.pdf))

*“How does long term exposure to base stations and mobile phones affect human hormone profiles?”* Eskander et al. (<http://www.sciencedirect.com/science/article/pii/S0009912011027330>)

FirstNet wireless technology will be LTE 4G or higher. Toxicology studies should be done comparing 4G and other communications protocols so that first responders and the population are exposed to the safest.

FirstNet has created to allow first responders to communicate easily AND TO PROVIDE WIRELESS BROADBAND NATIONWIDE (2-8).

Contrary to their statement FCC regulations do not protect from "any potential effects," as this letter from Mr. Norbert Hankin from the Center for Science and Risk Assessment, Radiation Protection Division, EPA, regarding the limitations and purpose of the FCC exposure standards notes ([http://www.emrpolicy.org/litigation/case\\_law/docs/noi\\_epa\\_response.pdf](http://www.emrpolicy.org/litigation/case_law/docs/noi_epa_response.pdf)) This very credible evidence is unmentioned and ignored.

FCC regulations are poorly enforced. (An issue which is completely ignored in the PEIS.) Rampant violations are documented by the Wall Street Journal and EMR Policy Institute. A detailed investigation by the EMR Policy Institute showed almost no enforcement of existing FCC RF limits and rampant violations (<http://www.marketwire.com/press-release/-1770139.htm>). A Wall Street Journal investigation (<http://online.wsj.com/articles/cellphone-boom-spurs-antenna-safety-worries-1412293055>) reports similar findings with one in ten towers out of compliance and experts concerned that out of compliance towers could be transmitting in the thermal range by around the end of 2015.

A fully elucidated mechanism should not be required to take action to protect public health when detrimental effects are found. Serious biological effects are acknowledged and then ignored on page 2-20.

**The two mechanisms that are extremely plausible and well-supported in the literature are completely ignored:**

**Oxidation -**

**Ca 2+ channels**

1. Pall, M. (2014). Microwave electromagnetic fields act by activating voltage-gated calcium channels: why the current international safety standards do not predict biological hazard *Recent Res Devel Mol Cell Biol* 7.
2. Pall, M. L. (2015). Microwave frequency electromagnetic fields (EMFs) produce widespread neuropsychiatric effects including depression. *J Chem Neuroanat* DOI: 10.1016/j.jchemneu.2015.08.001. <http://dx.doi.org/10.1016/j.jchemneu.2015.08.001>
3. Pall, M.L. (2016) Electromagnetic Fields Act Similarly in Plants as in Animals: Probably Activation of Calcium Channels via Their Voltage Sensor Current *Chemical Biology*, 2016, Vol. 10, No. 1.

The PEIS uses outdated documents to excuse inaction.

Contrary to their assertion, FCC limits do not protect against adverse effects, even the DOI noted **“the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today”** ([http://www.ntia.doc.gov/files/ntia/us\\_doi\\_comments.pdf](http://www.ntia.doc.gov/files/ntia/us_doi_comments.pdf))

The opening of the FCC docket to re-evaluate limits is acknowledged, but then ignored. The logical step of delaying implementation of the wireless component until that is completed is not even mentioned.

The National Toxicology Program findings are not even mentioned.

Their exposure calculations are based on only one antenna and work out to 477uW/m2, which is over the level shown to cause biological effects (<http://emfsafetynetwork.org/wp-content/uploads/2013/08/Biological-Effects-From-RF-Radiation-and-Implications-for-Smart-Meters-June-5-2013-2.pdf> see graph at end). Most towers or building antenna sites have more than one antenna radiating in any given direction, plus signals come from other nearby sites, and the ground infrastructure such as cellphones, tablets etc. So levels at ground level are likely to be far higher than that and levels in apartments or homes which get a direct hit from neighboring buildings could be far higher depending on distance.

Several IARC panelists have made public statements that the evidence now shows that radiofrequency radiation should be classified as either a class 2A or class 1 human carcinogen. The recent (ignored) National Toxicology Program findings support this. This should cause the wireless portion to be stopped and FirstNet should explain why to Congress, but no mention is made and therefore no such action is recommended.

They refuse to take action to protect birds in spite of lab and epidemiological evidence that support each other in finding hard because it requires "interpretation and extrapolation."(2-20) Doesn't it always?

They hardly touch on tree damage and totally ignore the following tree and plant studies:

- Radiofrequency radiation injures trees around mobile phone base stations: [https://www.researchgate.net/publication/306435017\\_Radiofrequency\\_radiation\\_injures\\_trees\\_around\\_mobile\\_phone\\_base\\_stations](https://www.researchgate.net/publication/306435017_Radiofrequency_radiation_injures_trees_around_mobile_phone_base_stations)

- Review: Weak radiofrequency radiation exposure from mobile phone radiation on plants: <http://www.ncbi.nlm.nih.gov/pubmed/27650031?dopt=Abstract>
- Tree damage in the vicinity of mobile phone base stations: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/06/Tree-damages-in-the-vicinity-of-mobile-phone-base-stations.pdf>
- The trees make it easy to recognize the effects of RF-EMF. Examples of tree damage: <http://kompetenzinitiative.net/KIT/wp-content/uploads/2016/09/Trees-in-Bamberg-and-Hallstadt-Documentation-2006-2016.pdf>
- Pall, M.L. (2016) Electromagnetic Fields Act Similarly in Plants as in Animals: Probably Activation of Calcium Channels via Their Voltage Sensor Current Chemical Biology, 2016, Vol. 10, No. 1. - **IMPORTANT MECHANISTIC DISCUSSION**

On 2-20 the PEIS acknowledges "*A number of other studies generally touch upon the nature of RF exposure and the disruption of biological processes that are fundamental to plant and animal growth and health, including but not limited to behavior, DNA damage, immune deficiencies, reproductive system effects, hormone dysregulation, degraded cognition and sleep, and desynchronization of neural activity (BioInitiative Working Group, 2012) (Balmori, A., 2005), but then no protective action is being taken because "The common practice for NEPA documents related to cellular towers is to cite FCC standards and point to the fact that they would be built and operated according to allowable FCC RF emission limits. Some NEPA documents that have more directly addressed the RF emissions potential largely point to the existing literature and suggest that although there is evidence that RF emissions could potentially affect some species, the evidence is insufficient to support a finding of adverse impacts on these species due to RF emissions (Ballistic Missile Defense Organization, 2000) (FCC, 2012)."*

This approach was not allowable by the courts in other situations. Especially since the inadequacy of the FCC RF limits is now acknowledged by both the DOI and the EPA. In addition, numerous studies have added to the knowledge about the hazard that RF poses to human health since both 2000 and 2012, including the NTP study which has found that RF is carcinogenic and breaks DNA.

I am fully disabled from wireless damage and exposure. Wireless has also caused a hypersensitivity in me to all types of EMFs.

It is against the Nuremberg Treaty to experiment on us without informed consent and it is unconstitutional to take away basic human rights and freedoms from me. I can not work, drive, access most public places or medical facilities, and can not even live on my own property without exposure with wireless being spread everywhere. Millions of Americans are already disabled from EMFs and most can not even use a wired device anymore because their sensitivity is too high. You are destroying the health of America and the environment creating a large microwave oven cooking everything within it. Radio Waves do not end. They continue forever.

The younger generation that was raised with this technology is already severely damaged. Young kids, teenagers, and young adults are already disabled from EMFs and environmental toxins and can not go out in public without a complete meltdown from EMFs including EMFs found in artificial lighting (except incandescent which is the safest artificial lighting there is and is the hardest to get now). I get contacts regularly from young adults and parents with kids who have no place to go or live without EMF exposure. Their lives have already been stripped from them. Disabling America and ruining our economy with all this sickness and medical issues is not the answer. Foreign countries are removing wireless from their cities and public places because it is a worldwide epidemic and they are having to pay out disability for it. Russia never allowed high amounts of radiation to begin with and told the world that these cell towers and RF levels were way too high. Will they be the only country left without damaged DNA to reproduce and without their whole country disabled, sick, economically collapsed and famined?

Wireless RF/EMFs reach everyone and everything 24/7. You can not opt out of it. It causes severe pain, brain fog, dementia, shuts down mitochondria and causes severe abnormal chronic fatigue, Parkinsons, Alzheimers, Diabetes type 3, shuts down kidneys/liver function, stops/paralyzes my heart, causes irregular heartbeat, anxiety, sharp painful heart jerking, rapid heart beat, cardiac arrest, headaches, joint pain, damages DNA, fertility, constant bleeding and severe abdominal pain, seizures, autism, ADHD, and so much more. It is the number one killer of bees and all pollinators along with birds, bats, frogs, etc. It makes animals and humans sick and destroys crops, trees, plants, etc as it weakens them and makes them more prone to sickness, disease, insect damage, etc.

It also increases mold both in your body and environment over 600 times including Lyme disease. There is now a mold epidemic due to all the wireless. When wireless hits mold, mold creates a self-defense against it and creates mycotoxins to survive. Mycotoxins are a chemical toxin that can be more deadly than mold itself and is still toxic will killed. It is too small to filter and extremely hard to kill but the dead spores are just as dangerous. Your body creates autoimmune disease the same way when wireless radiation hits your body to try to defend itself against the radiation poison. RF/wireless is a carcinogenic, neurotoxin and genotoxin.

Create safer technologies and safe zones where people can live with no wireless/RF radiation. Zone yourselves in and radiate only yourselves. Then when you are all dying from cancer, tumors, and sickness and have no more food after killing off all the pollinators, then let me know what ya think then?

I will be sending all my construction and medical bills to any company or government that causes radiation to be on my property. The answer isn't to cover up symptoms. The answer is to remove the problem. Just because there is a new technology, it does not mean that we have to use it. Every person who has a part in wireless deployments will be personally held accountable in court for the damage it has created as crimes against humanity and the environment. The law suits are coming!

I will attach a second word document with a list of videos, studies, medical information and more on the dangers of wireless radiation/EMFs along with a Worldwide list of wireless deactivation and removal that has already taken place due to this epidemic.

Citizen Fully Disabled from EMFs and Tired of Corrupt Companies Destroying Our Health, Children, and Environment:

Tara Schell  
Virginia

<https://www.whitehouse.gov/webform/cancer-touches-all-us-share-your-story-here>

### **Dangers of Blue Light:**

All artificial lighting has blue light except old fashioned incandescent bulbs or red and purple lamps. Even LEDs have blue light.

“Morning sun has blue light in the spectrum, but it is balanced with the other colors in the sun so you get the exact amount you need to reset your circadian rhythm by getting out in the morning soon after

rising and being grounded outside as well. No lenses should be worn for the 15 minutes you do this. This helps to reset melatonin as well.

Blue light doesn't just affect our eye clock, it also affects our skin surface, and our skin detects this color. Jack always recommends that if there is blue light exposure and you're inside, make sure your body is covered up from the blue light exposure, as well as your eyes. Outside, you take everything off if possible."

**Here is an app for the computer to block the blue light:** It will change the lighting to go down with the sun and in the apps section, you can make it more orange.

<https://justgetflux.com/>

**Here is a blue light map to see how much there is where you live. You want to live in the darkest places possible and avoid as much light as you can especially at night:**

<http://www.lightpollutionmap.info/#zoom=10&lat=4647733&lon=-8861149&layers=B0TFFFF>

**Regular glasses to block blue light:**

Zenni Optical sells them. They shouldn't be worn out in the sunlight though because our eyes need the full spectrum UV light. These lenses block all UV and blue light but have a clear lens.

You can get any style you want, and when you order them, you'll have the option to add Beyond UV to your glasses. You can get them in prescription and nonprescription.

<http://www.zennioptical.com/beyond-uv-blue-blocker>

**Goggles to block blue light buy here:**

<https://www.amazon.com/Uvex-Blocking-Computer-SCT-Orange-S1933X/dp/B000USRG90>

**Here is some info on blue light from a friend:**

"Jack Kruse believes that its the blue light that is at the heart of all health problems because it destroys DHA that is used by our mitochondria. Once the mitochondria doesn't work well, EMF problems loom large as well as other autoimmune conditions, cancer, etc. Once blue light is mitigated by using blue blockers, getting natural sunlight in our eyes, grounding outside barefoot, and setting our circadian rhythms right again, we can reverse the problems. In EMF fields he believes we need a LOT of fatty fish to replace our lost DHA.

Jack Kruse is really the top of the list when it comes to having information on blue light, non-native EMF, circadian biology and quantum biology. He is very wordy, and it takes a long time to read his work. He has a lot of videos online, and even podcasts you can follow. He's highly arrogant, but that's just his way.

You either like Jack or you don't.

**Here is a list of different videos, podcasts, and links to his articles about blue light, and emf:**

<http://jamieguard.com/2016/08/14/2-dr-jack-kruse-mitochondria-sunglight-quantum-biology/>

<https://www.youtube.com/watch?v=vAZR0tmhMqY>

<https://www.youtube.com/watch?v=VLmhs6dalok>

**These two videos were from this July in Vermont. Rubin and Jack give these talks. They would be good to watch first:**

<https://www.youtube.com/watch?v=wHDNW4qQI9I>

<https://www.youtube.com/watch?v=N-DTk9hYvI>

**Here's his website:**

<https://www.jackkruse.com/>

It's much easier to listen to him talk than to read his work. He does have a book as well available on his site. He doesn't seem to have a word quota and can just talk and talk."

**Article on Lighting and Insulin Resistance:**

<http://www.naturalhealth365.com/insulin-resistance-blood-glucose-1939.html>

## **Worldwide Actions on Cell Phones/Wireless Radiation**

### **Government Actions on Cell Phones/Wireless Radiation**

*Snapshot of the item below:*

#### **INTERNATIONAL POLICY BRIEFING**

#### **Radiofrequency Radiation in Communities and Schools**

#### **Actions by Governments, Health Authorities and Schools Worldwide**

**Please go to source documents by clicking on the blue underlined hyperlink.**

**(Last updated 11/28/2016)**

## **France**

[2016 The National Agency of Health Security of Food, Environment and Labour Report](#) recommends

- regulatory changes to ensure "sufficiently large safety margins" to protect the health of young children.
- "ALL wireless devices, including tablets, cordless phones, remote controlled toys, wireless toys, baby monitors and surveillance bracelets, should be subjected to the same regulatory obligations as cell phones."

National Legislation "Law on sobriety, transparency, information and consultation for exposure to electromagnetic waves" passed in 2015.

- **WiFi Banned in Nursery Schools:** WIFI and Wireless devices will be banned in "the spaces dedicated to home, to rest and activities of children under 3 years".
- **WiFi on "OFF" as Default to Minimize Exposures in Schools:** In elementary schools, WIFI routers should be turned off when not in use.
- **Schools Will be Informed:** The school board should be informed when new tech equipment is being installed.
- **Cell Tower Emission Compliance Will Be Verified:** A decree will define the limits of emission of equipments for electronic communications or transmission to which the public is exposed. These values can be verified by accredited organizations and results will be made accessible to the public through a National Radiofrequency Agency.
- **Citizens Will Have Access to Environmental/Cell Tower Radiation Measurements** Near homes: Every resident may get access to the results of measurements for their living space.
- **Cell Antennae Maps For the Country:** A description and map of the places with atypical (higher than the limits) places will be conducted at regular intervals with follow up of the actions being taken to limit the exposure. A map of all antennas will be produced for each town.
- **Continued Evaluation of Health Effects:** The National Radiofrequency Agency will be in charge of surveillance and vigilance, evaluating potential risks and setting up scientific research, including information on health effects.
- **SAR Radiation Labeling Mandated:** The SAR of cell phones must be clearly indicated on the package.
- **Information on Reducing Exposures Mandatory:** Information on ways to reduce exposure will be detailed in the contents of the cell phone package. .
- **WIFI Hotspots will be Labeled:** Places where WIFI is provided should be clearly marked with a pictogram.
- **Advertisements Must Recommend Devices That Reduce Radiation Exposure to the Brain:** Advertising for cell phones should clearly indicate the recommendation of hand free kits for protection of the head of the user and it will be included in the package. Advertising for cell phone not accompanied by such a kit is forbidden. Companies in violation will be fined 75,000 Euros.
- **Children Must Be Provided Protections:** At the request of the buyer, equipment reducing cell phone radiation exposures to the head for children less than 14 years should be provided.
- **The Public Will Be Informed:** Within a year, a policy of information on awareness and information on a responsible and reasonable use of cell phones and other apparatus emitting radiofrequencies will be set up.
- **Electrohyper-sensitivity Report To Be Submitted:** Within a year, a report on electrohyper-sensitivity must be given to the Parliament.

France: As of January 2017, new regulations aimed to protect employees from electromagnetic fields emitted by the electronic devices present in the workplace. A decree was issued by the French Government on 6 August 2016:

- Specific precautions will be taken regarding pregnant women.

- It is forbidden to place workers under age 18 in posts where EMF is apt to exceed limit values
- each employer has to evaluate EMF risks.
- When exposure exceeding limit values is detected or when an undesirable or unexpected health effect from exposure to EMF is reported, the worker will benefit from a medical visit.
- The employer must provide information and training to his employees regarding the characteristics of EMF emissions, the direct and indirect biophysical effects that could result from exposure to EMF, etc.
- The employer must adapt as much as possible the post in order to limit exposure to EMF.
- [Read about it here.](#)

#### 2011 French Cell Phone Statute:

- Merchants must display SAR Radiation levels for different phone models, all phones must be sold with a headset, cell phone ads aimed at children younger than 14 are banned and phones made for children under 6 are banned.

#### 2013 French Agency for Food, Environmental and Occupational Health & Safety Report

- Recommends hands free phones, SAR labeling, and “limiting the population's exposure to radiofrequencies... especially for children and intensive users, and controlling the overall exposure that results from relay antennas.”
- [The French National Library](#) along with other libraries in Paris, and a number of universities have removed all Wi-Fi networks.
- [Herouville-Saint-Clair](#) has removed all Wi-Fi equipment installed in municipalities.

The City of Lyon France ran a Campaign “No Cell Phone Before 12 Years old” [See colorful poster here.](#)

## Belgium

[Federal Public Health Regulations](#) passed on March 2013 due to Health Concerns for Children.

- **Phones designed for children under 7 years old are prohibited from sale.**
- **Total Advertising Ban on cell phones aimed at children.**
- Mandatory Radiation SAR levels must be available for consumers at point of sale.
- Warning label on phones: **“Think about your health – use your mobile phone moderately, make your calls wearing an earpiece and choose a set with a lower SAR value.”**
- Recommendations include use of hands-free methods to keep the phone away from the body such as text messaging and not making calls when the signal is weak, such as in elevator/vehicle.
- See examples of the posters that shops must display.
- Read Belgium’s [frequently asked questions about the new law.](#)
- [Powerpoint Presentation IMPLEMENTATION OF the Council Recommendations in Belgium Introduction of new rules for mobile phone sales Presentation by Dr.Marina Lukovnikova \(Ministry of Public Health, Belgium\)](#)
- [Read the Belgium Health Food and Safety Brochure on Wireless devices here.](#)
- [Read Dr. Moskowitz Press Release on the Belgium Law.](#)
- Read the News article [Flanders Today: Belgium bans sale of mobile phones designed for children](#)
- The Belgian Foundation Against Cancer warns that intensive use of a mobile phone can increase the risk of contracting cancer. They suggest that children younger than 12 should not use a mobile phone, and that using a mobile phone as an alarm clock is not desirable because the phone is in close proximity to the head the entire night. The

Cancer Foundation also strongly advises people not to use a mobile phone in the car or a train. [Read it here.](#)

- [Read the World Health Organization Belgium Report detailing the Law here.](#)

### **Belgium Health Agency Recommendations to Reduce Exposure**

- [Read Belgium's Statement on Wireless Networks:](#) "to reduce your exposure" which includes specific tips for Wi-Fi installations and I quote, " In order to limit the exposure, the following simple measures can be taken: Only switch on your wireless network connection when it is needed. This concerns the wifi adapter in your laptop in particular. Otherwise, your laptop tries to continually connect to the network, and that leads to unnecessary exposure and decreases the life expectancy of the batteries. Place the access point away from places where you spend lots of time."
- Read Belgium's [Tips for Reducing Cell Phone Exposure HERE](#); "Experts – including those on the [Superior Health Council\(link is external\)](#) – advise everyone to limit their exposure to mobile phone radiation. The following simple tips will help you."
- [Children and Cell Phones:](#) "The use of the mobile phone by children is a special point of attention. Children may be more sensitive to radio waves. Children absorb twice as much radiation in the brain than adults do, and 10 times more in the bone marrow of the skull. In addition, due to the popularity of the mobile phone, the cumulative exposure of the current generation of children will be much higher by the time they reach their adulthood than that of the current adults."

Belgium's [Ghent Municipality:](#) Wireless internet is banned from spaces that cater to children between 0 and three: preschools and daycares to reduce exposure to microwave radiation. [Read news article about the ban here.](#)

## **Spain**

- [The Parliament of Navarra voted to urge removal of WIFI in schools](#) and to apply the precautionary principle in relation to exposure limits to electromagnetic fields whose boundaries have become "obsolete".
  - The Parliament voted to adopt a resolution which calls to implement the Parliamentary Assembly of the Council of Europe resolution 1815 of 2011, which recommends to "review the scientific basis for the standards of exposure to electromagnetic fields" and " set thresholds for levels of preventive long-term exposure in all indoor areas not exceeding 0.6 volts per meter ".
- **2016 The High Court of Madrid recognizes "Electrosensitivity" as grounds for disability:** A telecommunications engineer who worked at Ericsson had his sensitivity recognized. "This is the first we have achieved total disability due exclusively to this syndrome," says attorney Jaume Cortés, the Col·lectiu Ronda. [Read the news article here.](#)
- [The Vitoria City Council unanimously approved](#) a precautionary approach with wireless: Citizens will be informed of the location of wireless transmitters are in civic centers and municipal buildings. It is recommended that children's spaces such as playgrounds and family libraries, will be free of WiFi or have decreased wifi and wifi free zones will be established in playgrounds and building entrances.
- **The Basque Parliament** joined the resolution of the Parliamentary Assembly of Council of Europe in 2011, which warns of the "potential risk" of electromagnetic fields and their effects on the environment and urged the promotion of campaigns against "excessive use "mobile phones among children.In a statement, the parliamentary Aralar, Dani Maeztustated, "To protect children's health, recommends the implementation of information campaigns and portable devices that emit microwaves, and prioritizes the use of cable connections in schools."

- **City of Tarragona Municipal Government (Tarragona is a major city 100 kilometres south of Barcelona) approved the “Institutional Declaration of support for people with Central Sensitivity Syndromes”**
  1. Carry out (with a yearly update) a diagnosis and census of those affected by CSS in the City of Tarragona, showing what is the actual situation and the specific needs of these patients and their families.
  2. An intervention protocol for the staff of the Area of Services to Citizens of the Tarragona City Government to look after those with CSS- including a list of economic subsidies for food, first necessity elements, reduced water bill, and home help specific to the needs of these patients.
  3. Housing protocol for people with CSS, especially those who have MCS and/or EHS, those threatened by eviction or those who are forced to leave their home. This protocol has to include a series of safe social housing (green/white spaces: free of xenobiotics and electromagnetic waves).
  4. Create green/white spaces in all municipal buildings (free of xenobiotics and electromagnetic waves).
  5. Eliminate, as much as possible, the use of pesticides in the whole of the municipality. In the case when this is not possible, establish a communication protocol to contact those affected and the press regarding the places and dates of the interventions with preventive advice.
  6. Training for social workers and educators about CSS, its social, health and economic reality. Elaboration of information and education to increase the knowledge about these illnesses amongst the general population and of the city workers in particular, with the objective of diminishing the stigma that is now present regarding these illnesses.
  7. Protocol for adapting working conditions of the municipal workers who have CSS with specific measures of support when having a flare up. These would be the measures: work schedule flexibility, encourage work from home through internet (teleworking), reserved parking spaces and include in the collective agreement not deduct the salary of the first 20 days of sick leave.
  8. [Read the full article detailing the actions here.](#)

## Canada

- **Health Canada offers “Practical Advice”** on reducing exposure to wireless radiation:
  1. Limit the length of cell phone calls, 2. Replace cell phone calls with text, use "hands-free" devices and 3. Encourage children under the age of 18 to limit their cell phone usage. [Read it here.](#)

*“Health Canada reminds cell phone users that they can take practical measures to reduce RF exposure. The department also encourages parents to reduce their children’s RF exposure from cell phones since children are typically more sensitive to a variety of environmental agents. As well, there is currently a lack of scientific information regarding the potential health impacts of cell phones on children.”*
- [Canadian Parliament Standing Committee on Health of the House of Commons issued a report "Radio Frequency Electromagnetic Radiation and the Health of Canadians"](#) on June, 2015 after holding public hearings regarding Health Canada’s Safety Code 6 recommended limits. They made 12 recommendations including an awareness campaign on reducing exposures, improved information collecting and policy measures regarding the marketing of radiation emitting devices to children under the age of 14, "in order to ensure they are aware of the health risks and how they can be avoided."
- **2015: [National Bill C-648 was Introduced into the House Of Commons.](#)** “An Act Respecting the Prevention of Potential Health Risks From Radiofrequency Electromagnetic Radiation” would require manufacturers of all wireless devices to place specific health warning labels clearly on packaging, or face daily penalties /fines and/or

imprisonment. Although the Bill did *not pass*, it made headlines. Press Conference for [Bill C-648 Video](#).

- Canadian Pediatric Association issued a Position Statement [Healthy active living: Physical activity guidelines for children and adolescents](#) which states:  
For healthy growth and development: screen time (eg, TV, computer, electronic games) is not recommended for children under 2 years old. For children 2-4 years, screen time should be limited to <1 h/day; less is better. [Read the Position Statement Here](#).

## European Parliament

[Resolution 1815](#): In 2011 The Parliamentary Assembly of the Council of Europe issued ***The Potential Dangers of Electromagnetic Fields and Their Effect on the Environment***.

*A call to European governments to “take all reasonable measures” to reduce exposure to electromagnetic fields “particularly the exposure to children and young people who seem to be most at risk from head tumours.”* The Resolution calls for member states to:

- Implement “information campaigns about the risk of biological effects on the environment and human health, especially targeting children and young people of reproductive age.”
- “Reconsider the scientific basis for the present standards on exposure to electromagnetic fields set by the International Commission on Non-Ionising Radiation Protection, which have serious limitations, and apply ALARA principles, covering both thermal effects and the athermic or biological effects of electromagnetic emissions or radiation.”

*“For children in general, and particularly in schools and classrooms, give preference to wired Internet connections, and strictly regulate the use of mobile phones by schoolchildren on school premises.”* [Read Resolution 1815](#)

[Read the 2009 Resolution: Health concerns associated with electromagnetic fields calling for a review of the issue.](#)

## Australia

The Australian Radiation Protection and Nuclear Safety Agency has issued a [Fact Sheet](#) titled *How to Reduce exposure from mobile phones and other wireless devices*.

- Reduce the risk from WiFi devices by “keeping them at a distance, for example placing the wireless router away from where people spend time”, and “reducing the amount of time you use them”.
- ARPANSA recommends that parents encourage their children to limit their exposure stating that “It is recommended that, due to the lack of sufficient data relating to children and their long term use of mobile phones, parents encourage their children to limit their exposure by reducing call time, by making calls where reception is good, by using hands-free devices or speaker options, or by texting.” [Read it HERE](#).

Queensland Department of Education, Training and Employment issued [Your Guide to Safe Technology](#) guide in 2015 to all schools that states:

*It’s not only physical hazards you need to consider when thinking about health and safety issues at work or home — you should also think about how you use technology. When using a computer, you need to think about:*

- ergonomics and posture
- radiation
- vision impacts
- harmful lack of exercise (DVT).

*“Wireless devices — smart/mobile phones, tablets, slates, monitors etc — all emit low levels of electromagnetic radiation and should be used correctly. When using electronic devices, the department recommends you follow WiFi/3G/4G best practice:*

- *follow the manufacturer's usage guideline operate from a table or bench — not on your lap*
- *use 'hands-free' devices to keep smart/mobile phones away from your head and body during phone calls limit the number and length of calls*
- *position the device antenna away from your body*
- *do not sit within 0.5 m of a wireless router use smart/mobile phone in areas of good reception to reduce exposure."*
- [Watch a video on these recommendations here.](#)

## New Zealand

[Rotokawa School implemented steps to minimize RF Exposure](#) on 2/2/2016

After concerns raised about e-learning by a small group of parents from the school, the principal has put some positive procedures in place as follows;

- Children will use ipads in flight mode
- Children using laptops and Chromebooks will work on the desk top
- Parents may request that their child use an Ethernet cord to access the internet
- Children are taught about the health precautions as part of their cyber citizenship
- Digital learning in the one to one Year 5 & 6 environment is kept to less than 2 hours per school day.
- The principal has also stated there are no plans to increase the existing Wi-Fi coverage at this stage.

## Italy

- **2016: Mayor of Borgofranco d'Ivrea has ordered Wi-Fi to be turned off in schools.** "Mayor Livio Tola told the town's high school and elementary school to return to using cables to connect to the internet after reading that the electromagnetic waves given off by wireless routers were especially harmful to young children." [Read the newspaper article here.](#) [Read the News article here "Ivrea, The Mayor Removes WiFi as it Could Be Dangerous".](#)
- **On June 10, 2015, the State Parliament of South Tyrol voted to [allow the application of the precautionary principle](#) mandating the state government to:**
  - 1. To replace existing wireless networks whenever possible with networks that emit less radiation at schools, preschools, hospitals, nursing homes, and other public facilities.
  - 2. Establish a working group whose mandate it is to assess these new technologies and their exposure levels. With regard to wireless communication technologies, mobile Internet access, and public health, the working group shall clarify which technologies emit less radiation and provide sustainable technology options and
  - 3. To start an education and awareness campaign that informs about possible health risks, especially regarding the unborn, infants, children, and adolescents and that develops guidelines for a safer use of cell phones, smartphones, and Wi-Fi ...[Discussion at the Plenary Session, 10 June 2015 \(in German\)](#) //Official Files, Resolutions (in German) //Previous Hearing at the Parliament of South Tyrol, 29 April 2015 (in German)
- **The [Italian Supreme Court](#) ruled a man's brain tumor was caused by his cell phone use in 2012.** The National Institute for Workmen's Compensation must compensate a worker with head tumor due to cell use. [Read news article with details here.](#) Read Daily Mail article [Mobile phones CAN cause brain tumours, court rules in landmark case.](#)
- **A school In Lecce, Italy, "Istituto Comprensivo Alighieri- Diaz" banned wifi.** Their two resolutions decided: a) to ban wifi in school and install a wired system for the use of

internet and b) Reject the request of the local government (Municipality) to install an antenna on the school roof for the wireless signal providing for the "Wireless city" program. The resolution also asks the Municipality to install the antenna at a reasonable distance from school. [Read the official resolutions number 1 here](#) and [Resolution 2 Here](#).

- **The Piemonte Region has adopted a resolution to limit EMF exposure**, to limit the use of wifi in schools and be considerate to the problem of EHS people. [Read about it here](#).
- **The Italian Society for Preventive and Social Pediatrics has officially called to prohibit cell phones for children under 10 years old.** Giuseppe Di Mauro, president of the Italian Society of social and preventive pediatrics [Società italiana di pediatria preventiva e sociale ([www.sipps.it](http://www.sipps.it))] "We do not know all the consequences associated with cell phone use, but excessive use could lead to concentration and memory loss, increase in aggressiveness and sleep disturbances." and he cites electromagnetic fields stating "The damage to health are increasingly evident" [Read it here](#).
- **Turin Mayor Chiara Appendino laid out plans "to cut back on Wi-Fi in state schools** and government buildings over concerns that radiation might damage people's health". Read 7/2016 News Report [Turin could slash Wi-Fi over 'radiation' concerns](#)

## Finland

In 2015 the Radiation and Nuclear Safety Authority (STUK) revamped their public information website to recommend reduced exposure to children and state the following:

- The page [Mobile phones are a major source of radio frequency radiation](#) states that, 'The level of exposure to radiation from a mobile phone held next to user's ear can approach the exposure limits. *Never before have humans been exposed to equally strong sources of radiation in their living environments.* Identifying any health impacts is highly important because practically everybody uses a mobile phone today.'
- [Read STUK Recommendations to reduce cell phone exposure HERE: Use a hands free device, don't use phones reception is poor, the phone should be kept on a table or similar location instead of in the user's pocket.](#)
- "STUK recommends that unnecessary exposure to radiation from mobile phones be avoided. In particular, children's unnecessary exposure should be avoided as their life-long exposure will be longer than that of those who begin using mobile phone as adults and as only scant research exists on health effects to children."

In 2009 the Radiation and Nuclear Safety Authority (STUK) initially issued recommendations to reduce exposure with more explicit cautionary language.

- [Read the information posted on the STUK website in 2009- now removed.](#)
- [Read a policy position paper by STUK from 2009](#) detailing why "It would be good to restrict children's use of mobile phones."
- [Read the 2011 policy position from STUK.](#)
- [Read a news article from 2009](#) when STUK first recommended restricting the use of mobile phones by children.

## Israel

- The Israeli Government created the EMF public education webpage [National Information Ctr for Non-Ionizing Radiation](#). [The Israeli Ministry Of Education](#) has issued guidelines limiting WiFi and [cell phone](#) use in schools.
  - Preschool through 2nd grade have banned the use of wireless networks. In third and fourth grade class internet is restricted to 3 hours per week.

- A hard wired direct cable connection is required if the teacher has a computer in the class.
- Magnetic fields below 4 mG are being reduced in schools representing the government's position that international guidelines are NOT protective of children.
- [The Israeli Supreme Court](#) ordered the Israeli government to reply on ceasing Wifi installations
- In third and fourth grade class internet is restricted to 3 hours per week.
- [The Education Ministry](#) has instructed all schools to perform radiation tests.
- Israel's Minister of Health Rabi Litzman [stated](#) that he supports a ban on Wi-Fi in schools.
- A hard wired direct cable connection is required if the teacher has a computer in the class.

2016: Cell phones are banned in classrooms per a memorandum from the Ministry of Education. [Watch a newsreport on this action here.](#)

Read the official [ISRAEL 2015 RF Safety Report](#) with actions being taken to reduce EMF.

The Ministry of Health published [Environmental Health in Israel 2014](#) which states that "Precautions should be strictly enforced with regard to children, who are more sensitive to developing cancer." and that "wireless communication networks in schools be reduced." The Health Ministry recommends "sensible use of cellular and wireless technology, including: considering alternatives like landline telephones, use of a speaker while talking on a cellphone, and refraining from installing the base of wireless phones in a bedroom, work room, or children's room." The Report states that "Findings in Israel clearly indicated a link between cellphone use for more than 10 years and the development of tumors in the salivary glands, particularly among people who held the telephone on the same side where the tumor developed and individuals in the highest category of exposure (heavy use in rural areas)."

- Linda S. Birnbaum, Director, USA National Institute of Environmental Health Sciences and National Toxicology Program wrote in the Israeli Report final chapter that, "If some of the om studies turn out to be harbingers of things to come, we may have major health consequences from the nearly ubiquitous presence of wireless equipment."

#### **Haifa (Israel's third largest city) removes Wi-fi from all schools.**

- Haifa Mayor Yona Yahav, said that "When there is a doubt, when it comes to our children, there is no doubt". Read the News Report [The - Wi-Fi in kindergartens and schools in Haifa severed.](#)
- "The roots of the decision go back to a 2013 petition by parents in four schools who claim that such networks are harmful. The case eventually made its way to the High Court, which has postponed a final decision on the matter...The movement has spread from Haifa to other cities as well, and petitions have been signed by parents in dozens of cities demanding the removal of the networks. Haifa is the first city to take action on the matter. Haifa Mayor Yona Yahav said that the city would replace the wireless network with a wired connection that will provide safer options to students." [Read the news article here.](#)
- This action occurred after this Israeli [TV Documentary – "HOW WE ARE KILLING OURSELVES – WIRELESS RADIATION"](#) aired.

Read the 2009 News article on the cell phone guidelines in Israel [Health Ministry.: Limit Kids' Use of Cell Phones](#)

## Switzerland

- **The Switzerland Federal Office for the Environment FOEN** has [a webpage on Wi-Fi](#) which states “caution should be exercised primarily when using devices held close to the body, such as laptops, PDAs and Internet telephones..” and gives recommendations on how to reduce exposure including turning the Wi-Fi off when not in use, installing the access point one metre away from places where you work, sit or rest for long periods of time and keeping laptops off laps.
- **The Switzerland Federal Office for the Environment FOEN** has [a webpage on Cell Phones](#) which details ways to reduce mobile phone radiation. FOEN also has additional EMF factsheets on various EMF sources including on [baby monitors](#) where they state that “it is **advisable to reduce the infant’s exposure to emissions as far as possible.**”
- **The 2015 Environmental Report Chapter 17 on Electromog** states “Effects can also be detected for weak radiation intensity. For example, weak high-frequency radiation can alter electric brain activity and influence brain metabolism and blood flow. Whether these effects have an impact on health is still unclear” and recommends the precautionary principle to reduce risk “Because major gaps still exist in our knowledge about the health impacts of long-term exposure to weak non-ionising radiation, the adopted protective strategy should be pursued consistently.” [Read it here.](#)
- [Switzerland FOEN 2012 Radiation of radio transmitters and Health](#) “In view of the fact that there are gaps in the available data, the absence of proof of health risks does not automatically also mean proof of their absence. From the scientific point of view, a cautious approach in dealing with non-ionising radiation is still called for. There remains a need for extensive research into the potential long-term effects”
- [The Governing Council of Thurgau Canton](#) 2008 “The Governing Council recommends for schools to forgo the use of wireless networks when the structural makeup of a given school building allows for a wired network.” [Read a letter by the Council here.](#)

### Swiss Physicians Association of Doctors for Environmental Protection

[2012 Swiss Physicians Letter](#) “the risk of cancer for this type of [wireless] radiation is similar to that of the insecticide DDT, rightfully banned... From the medical point of view, it is urgent to apply the precautionary principle for mobile telephony, WiFi, power lines, etc.”

[2014: Preliminary draft for a federal law on the protection against dangers:](#) Non-ionizing radiation (NIS) is growing steadily. Especially the everyday stress in the area of low-frequency and high-frequency. [Read it here.](#)

[2016: Press Release on the NTP Study and Policy Implications:](#) “There are increasingly clear indications that mobile radio is a health hazard. From a medical point of view it is clear: the scientific results so far show it is clear that prudent avoidance of unnecessary exposures is necessary.”

- Additional Links by Swiss Physicians for the Environment  
Report on [Smartphones- \(OEKOSKOP 1/16\)](#) [AefU-News about Electromog](#)

## Germany

- The Federal Office for Radiation Protection (FORP) provides tips for reducing radiation exposure to smartphones, tablets and wireless devices stating, “*Since long term effects could not be sufficiently examined up to now the Federal Office for Radiation Protection (BfS) recommends to keep exposures to these fields as low as reasonably achievable.*” [Read the precautionary advice here.](#)

*“There are uncertainties in the [risk](#) assessment that the German mobile communications research programme has not been able to remove completely. These include in particular:*

- *possible health risks of the long-term exposure of adults to [highfrequency](#) electromagnetic fields when making mobile telephone calls (intensive mobile use over more than 10 years)*
- *the question of whether the use of mobile phones by children could have an effect on health.*

*For these reasons, the BfS continues to consider that precautionary measures are necessary: exposure to electromagnetic fields should be as low as possible.”*

- **Smartphones and Tablets:** [Read the webpage with recommendations to reduce exposure here:](#)

***“Smartphones and tablets for children?***

*It is particularly important to minimise children’s exposure to radiation. They are still developing and could therefore react more sensitively in terms of health.”*

- The FORP recommends landline phone instead of mobile phone base stations and that schools should not connect wirelessly to the internet. [Read a 2015 statement here.](#)

[See their poster “Less radiation when Telephoning” here.](#)

[The German Federal Ministry](#) for Radiation Protection stated in 2007 ,“supplementary precautionary measures such as wired cable alternatives are to be preferred to the WLAN system.” See original German Bundestag document [here](#), and an English translation [here](#).

**[Bavaria:](#) The State Ministry of Education and Cultural Affairs:** “For precautionary reasons the Federal Office for Radiation Protection recommends for schools that if a wireless network is used to place its components in suitable locations and to prefer the use of wired network solutions whenever possible.” In 2007 Parliament recommendation to all schools to *not* install wireless LAN networks.

**[Frankfurt:](#)** “**In Frankfurt’s schools there will be no wireless networks in the short or mid term.** The Local Education Authority did not wish to conduct a “large scale human experiment,” said Michael Damian, spokesperson of the Head of the School Department Jutta Ebeling.

**2013: Four German Federal Agencies issued a guidebook recommending reducing cell phones and Wi-Fi to young children:** [“Parenting Guide: Environmental and Child Health”](#) by the Federal Office for Radiation Protection (BfS), the Federal Institute for Risk Assessment (BfR), the Robert Koch Institute (RKI ) and the Federal Environmental Agency (UBA). It contains practical information including reducing electromagnetic radiation from baby monitors and telephones: Baby monitors should be as far as possible away from the crib. Phones should be banished from the nursery. They are not suitable toys for

infants and toddlers. Use of cabled landline phones is preferable. Wi-Fi routers are not suitable in children's bedrooms, and should be switched off when not in use, especially at night.

- Download [Parenting Guide: Environmental and Child Health](#) here.
- [Read a news article about it by clicking here.](#)

## Austria

**Salzburg: The Public Health Department Advises Against Wi-Fi in Schools:** "The official advice of the [Public Health Department of the Salzburg Region](#) is not to use WLAN and DECT in Schools or Kindergartens." -Gerd Oberfeld, MD.

**The public health department of Salzburg (Landessanitätsdirektion) recommends to evaluate mobile phone base station exposures based on the [EUROPAEM EMF Guideline 2016](#)**

**[The Public Health Department of Salzburg lists Electrosmog studies](#)** highlighting the EUROPAEM EMF guideline 2016 as representing the current state of medical science that it is used by the Landessanitätsdirektion Salzburg for the health assessment of EMF.

**The Vienna Medical Association has issued [cell phone safety guidelines](#)** stating that cell phones should be used for as short of a time as possible and that children under 16 should not use cell phones at all. They also state that "wireless LAN leads to high microwave exposure".

January 2016 : [Vienna Medical Association has issued new Ten Cell Phone Guidelines](#). They are:

1. Make calls as short and little as possible - use a landline or write SMS. Children and teenagers under 16 years old should carry cell phones *only for emergencies!*
2. Distance is your friend- Keep the phone away from body during connection of Phone. Pay attention to the manufacturer's safer distance recommendation in the manual, keep a distance during the call set-up from the head and body. Take advantage of the built-in speakerphone or a headset!
3. When using headsets or integrated hands-free, do not position mobile phones directly on the body - special caution applies here for pregnant women. For men, mobile phones are a risk to fertility if Mobile is stowed in Trouser pockets. Persons with electronic implants (pacemakers, insulin pumps et cetera) must pay attention to distance. Unless otherwise possible, use coat pocket, backpack or purse.
4. Not in vehicles (car, bus, train) calls - without an external antenna, the radiation in the vehicle is higher. In addition, you will be distracted and you bother in public transport the other passengers!
5. During the car when driving should be an absolute ban on SMS and internetworking - the distraction leads to self-endangerment and endangering other road users!
6. Make calls at home and at work via the fixed corded (not wireless) network - Internet access via LAN cable (eg via ADSL, VDSL, fiber optic) no Radiation, is fast and secure data transfer. Constant radiation emitters like DECT cordless telephones, WLAN access points, data sticks and LTE Home base stations (Box, Cube etc.) should be avoided!
7. Go offline more often or use Airplane mode - Remember that for functions such as listening to music, camera, alarm clock, calculator or offline games an internet connection is not always required!

8. Fewer apps means less radiation - Minimize the number of apps and disable the most unnecessary background services on your smartphone. Disabling "Mobile services" / "data network mode" turns the smartphone again into a cell phone. You can still be reached, but avoid a lot of unnecessary radiation by background traffic!
9. Avoid Mobile phone calls in places with poor reception (basement, elevator etc) as it increases transmission power. Use in poor reception Area a headset or the speakerphone!
10. For buyers of mobile phones, Look out for a very low SAR value and an external antenna connection!

Read the [Press release \(in German\): http://www2.aekwien.at/1964.py?Page=1&id\\_news=8972](http://www2.aekwien.at/1964.py?Page=1&id_news=8972)

See The Poster (in German): <http://www.aekwien.at/aekmedia/Medizinische-Handy-Regeln.pdf>

[See the translated Poster with Tips in English](#)

**Austria's" Highest Health Council of the Ministry of Health"** has a brochure with advice to reduce exposure to cell phone radiation. It states that since the long term research is still not completed, it is advisable to take simple precautions to reduce exposure. [Read the Brochure here.](#) [See the WHO Report on Austria's EMF activities and research studies underway here.](#)

## India

2012 The Ministry of Communications and Information Technology issued [new EMF guidelines](#) with new Exposure Limits *lowered to 1/10 of the ICNIRP level, and SAR labeling on phones.*

- [Official cell phone radiation guidelines](#) *Precautionary Guidelines for mobile users:* 1. Keep distance – Hold the cell phone away from body to the extent possible. 2. Use a headset (wired or Bluetooth) to keep the handset away from your head. 3. Do not press the phone handset against your head. Radio Frequency (RF) energy is inversely proportional to the square of the distance from the source -- being very close increases energy absorption much more. 4. Limit the length of mobile calls. 5. Use text as compared to voice wherever possible. 6. Put the cell phone on speaker mode. 7. If the radio signal is weak, a mobile phone will increase its transmission power. Find a strong signal and avoid movement – Use your phone where reception is good. 8. Metal & water are good conductors of radio waves so avoid using a mobile phone while wearing metal-framed glasses or having wet hair. 9. Let the call connect before putting the handset on your ear or start speaking and listening – A mobile phone first makes the communication at higher power and then reduces power to an adequate level. More power is radiated during call connecting time. 10. If you have a choice, use a landline (wired) phone, not a mobile phone. 11. When your phone is ON, don't carry it in chest/breast or pants pocket. When a mobile phone is ON, it automatically transmits at high power every one or two minutes to check (poll) the network. 12. Reduce mobile phone use by children as a younger person will likely have a longer lifetime exposure to radiation from cell phones. 13. People having active medical implants should preferably keep the cell phone at least 15 cm away from the implant.
- [The Parliamentary Standing Committee on Science & Technology, Environment & Forests](#) issued a report in the Rajya Sabha on July 23, 2015, recommending "indigenous methodology and techniques to check the alarming increase in radiation from radio-active signals, RF and Electro-magnetic Fields (EMFs)." The committee said "Indians were more prone to risk from radiations as compared to Europeans because of their low body mass index (BMI) and low fat content.

Therefore, comprehensive scientific studies must be conducted to “conclusively establish the level of risks and adverse health effects of electromagnetic radiation (EMR) of cell towers”.

- 2013: [Supreme Court of India](#) upheld the High Court of the State of Rajasthan decision to remove all cell towers from the vicinity of schools, hospitals and playgrounds because of radiation “hazardous to life.” Two hundred and four mobile towers installed on the school premises of Rajasthan have been removed in compliance.
- [A Journey for EMF](#): The Ministry of Communications and Information Technology has developed an [EMF webpage](#).
- [Zilla Parishad orders removal of all cellphone towers](#) near schools citing exposure to “harmful radiation”.
- [Municipal Corporation of Greater Mumbai](#), the civic body that governs the capital city of [Mumbai](#) in [Maharashtra](#) (India's richest municipal organization) in 2016 in its new policy on mobile towers, no longer allows cell towers on playgrounds, recreational grounds, gardens and parks. [Read news article](#).
- Read a [Document prepared by Dr. Sharma, Sr. Deputy Director of the Indian Council of Medical Research on Indian Research Studies](#).
- See the Colorful graphic created by the Government [Ensuring Safety from Radiations : Mobile Towers and Handsets](#)
- [Read the 2011 Report: Ministry of Environment and Forest, Government of India's Expert Group study on the possible impacts of communication towers on Wildlife including Birds and Bees](#)
  - *“The review of existing literature shows that the Electro Magnetic Radiations (EMRs) are interfering with the biological systems in more ways than one. There had already been some warning bells sounded in the case of bees and birds, which probably heralds the seriousness of this issue and indicates the vulnerability of other species as well.”*

## Russia

- [The Russian National Committee on Non-Ionizing Radiation Protection](#) in [ELECTROMAGNETIC FIELDS FROM MOBILE PHONES: HEALTH EFFECT ON CHILDREN AND TEENAGERS \(2011\)](#) has repeatedly [warned](#) about electromagnetic radiation impacts on children and recommended WiFi not be used in schools.
- **Official Recommendations:** The Russian Federation specifically advises that those under the age of 18 should not use a mobile phone at all, recommends low- emission phones; and requires the following: on-device labelling notifying users that it is a source of RF-EMF, user guide information advising that “it is a source of harmful RF-EMF exposure” and the inclusion of courses in schools regarding mobile phones use and RF-EMF exposure issues. “Thus, for the first time in the human history, children using mobile telecommunications along with the adult population are included into the health risk group due to the RF EMF exposure.”
  - “In children, the amount of so-called stem cells is larger than in adults and the stem cells were shown to be the most sensitive to RF EMF exposure.”
  - “It is reasonable to set limits on mobile telecommunications use by children and adolescents, including ban on all types of advertisement of mobile telecommunications for children.”

[Decision of Russian National Committee on Non-Ionizing Radiation Protection](#) 2008, "Children and Mobile Phones: The Health of the Following Generations is in Danger"

## European Environment Agency

- The EEA's issued 2013 *Late Lessons From Early Warnings: Chapter 12: Mobile phone use and brain tumour risk: early warnings, early actions?* which concludes that "Precautionary actions now to reduce head exposures, as pointed out by the EEA in 2007, and many others since, would limit the size and seriousness of any brain tumour risk that may exist. Reducing exposures may also help to reduce the other possible harms..." [Read it here.](#)
- 2011 David Gee, EEA Senior Advisor on Science, Policy and Emerging Issues stated in a press release that "We recommend using the precautionary principle to guide policy decisions in cases like this. This means that although our understanding is incomplete, this should not prevent policy makers from taking preventative action." [Read it here.](#)
- [2009 EEA Recommendations based on current evidence \(2009\)](#) The evidence is now strong enough, using the precautionary principle, to justify the following steps: 1. For governments, the mobile phone industry, and the public to take all reasonable measures to reduce exposures to EMF, especially to radio frequencies from mobile phones, and particularly the exposures to children and young adults who seem to be most at risk from head tumours.
- 2007 Professor Jacqueline McGlade, the EEA's executive director issued a statement that "Recent research and reviews on the long-term effects of radiations from mobile telecommunications suggest that it would be prudent for health authorities to recommend actions to reduce exposures, especially to vulnerable groups, such as children." [Read it here.](#)

## Singapore

Singapore's National Environmental Agency specifically advises precautions. Below is the exact text found on the [Frequently asked Questions About Radiation Protection](#).

"What is NEA's advice to the public on the proper way of using mobile phones amidst all the concerns?

While further research is being carried out to study the long-term health effects of RF field, individuals could take precautionary measures to reduce RF exposure to themselves or their children by limiting the length of calls, or using 'hands-free' devices to keep the mobile phones away from the head and body."

## United Kingdom

The UK National Health Service has changed it's advice. Here is the story. As of 2011 it offered specific [Recommendations](#) to reduce cell phone radiation exposure to children.

- [Read the pre 2015 webpage entitled 'Risks of mobile phone use'](#) with recommendations which state; *"Children are thought to be at higher risk of health implications from the use of mobile phones. This is because their skulls and cells are still growing and tend to absorb radiation more easily. It is recommended that children use mobile phones only if absolutely necessary."*
- [Read the UK Department of Health pre- 2015 brochure](#) on mobile phones and health which reads:

*"The expert group has therefore recommended that in line with a precautionary approach, the widespread use of mobile phones by children (under the age of 16) should be discouraged for non-*

*essential calls. In the light of this recommendation the UK Chief Medical Officers strongly advise that where children and young people do use mobile phones, they should be encouraged to: • use mobile phones for essential purposes only • keep all calls short - talking for long periods prolongs exposure and should be discouraged The UK CMOs recommend that if parents want to avoid their children being subject to any possible risk that might be identified in the future, the way to do so is to exercise their choice not to let their children use mobile phones.”*

- [Read the 2011 brochure on base stations and health](#) which reads, “Therefore, as a precaution, the UK Chief Medical Officers advise that children and young people under 16 should be encouraged to use mobile phones for essential purposes only, and to keep calls short. If you are concerned, you can take steps to reduce your exposure such as using hands free kits or texting.”
- The NHS also had additional website sections on health effects. The Mobiles and mums-to-be webpage was about the research showing cell phone was linked to behavioral issues in children. [Read it here](#). The NHS webpage [Mobile effect on sleep](#) detailed research which concluded RF “is associated with adverse effects on sleep quality within certain sleep stages”. These webpages were deleted from the current site.
- For the public they had “recommendations to help lower any potential long-term risks” which include keeping calls short, keep phone away from the body on standby mode, only use it when the reception is strong and use a phone with an external antenna.
- [2002 The Stewart Report](#) commissioned by the UK Government found that exposure to RF radiation below guidelines has not been “proven” to cause adverse health effects but it is not possible to say “that exposure to RF radiation, even at levels below national guidelines, is totally without potential adverse health effects” as “there is some scientific evidence which suggests that there may be biological effects and gaps in knowledge justify a precautionary approach to the use of mobile phone technologies until much more detailed and scientifically robust information on any health effects becomes available.”
- [Check out a slide presentation on people and wireless radiation by NHS here](#).

**Then, the UK National Health service changed the public advice text. Everything noted *above* was reworded. Now the website states:**

- “If there are any health risks from the use of mobile phones, children might be more vulnerable because their bodies and nervous systems are still developing. Research carried out to date hasn't supported a link between mobile phone use and childhood cancers such as leukaemia. However, if you have any concerns, you can lower your child's exposure to radio waves by only allowing them to use mobile phones for essential purposes and keeping calls short.” [Read this new text here](#).
- See the brochure (2011) entitled [“Mobile phones and base stations: Health advice on using mobile phones”](#) which states: The body and nervous system are still developing into the teenage years. Therefore, as a precaution, the UK Chief Medical Officers advise that children and young people under 16 should be encouraged to use mobile phones for essential purposes only, and to keep calls short.
- The newly edited section called [Mobile phone safety - FAQs states:](#)

***Do scientists know everything about mobile phones and health?***

*No, and research is continuing. Mobile phones have only been widely used for about 20 to 30 years, so it's not possible to be so certain about the safety of long-term use. More research on the effects of mobile phones on children is also needed, as they're known to be more sensitive than adults to many*

environmental agents, such as lead pollution and sunlight. **Government advice is to be on the safe side and limit mobile phone use by children.**

**2016 The Control of Electromagnetic Fields at Work Regulations 2016 (CEFAW)** requires employers to assess the levels of EMFs their employees may be exposed to, ensure compliance, provide information on risks and take action if necessary. Legislation [http://www.legislation.gov.uk/uksi/2016/588/pdfs/uksi\\_20160588\\_en.pdf](http://www.legislation.gov.uk/uksi/2016/588/pdfs/uksi_20160588_en.pdf)

- “You must ensure you take workers at particular risk, such as expectant mothers and workers with active or passive implanted or body worn medical devices, into account when appropriate, devise and implement an action plan to ensure compliance with the exposure limits.” [Read news article on regulations.](#)

## Cyprus

“Be Precautionary and reduce exposure to phones, Wi-Fi and other wireless devices,” states the Cyprus National Committee on Environment and Child Health (ECH). Dr. Stella Michaelidou, President of the ECH, states that society should respond by taking precautions because “Documentation of other potential and more serious biological side effects are on the tip of an emerging iceberg.” [This stance was documented in a recent news article](#) that quotes Michaelidou stating that “multiple and frequent exposure to this kind of radiation, which falls below the acceptable levels of thermal effects, pose a health risk to a developing embryo.” and children who use their mobile phone more frequently face a higher risk at having a weaker memory, attention deficit disorder, and similar issues.

[The Cyprus National Committee on Environment and Child Health](#) supported by Cyprus “has as its basic aim the prevention of illnesses, which also are related with the exposure of children in environmental dangers.” The activities of the National Committee are supported by the State of Cyprus. [Read about the Committee and it’s mission on their website here \(click on the British flag to get the English translation.\)](#)

### Official Statements and Documents

- [Protecting children from radiation emitted by Wi-Fi, mobile phones and wireless](#) by Dr. Stella Kanna Michailidou of the National Committee Chairman "Environment and Children's Health"
- [See the Commission’s EMF brochure](#) on reducing the risks to children from exposure to the Non Ionizing Radiation (mobile phones, Wi-Fi, tablets, etc.).
- The National Committee on Environment and Children's Health Website Information on EMFs can be accessed at <http://www.cyprus-child-environment.org/easyconsole.cfm/id/324>

### PSA Video Children’s Health and Wi-Fi

- The Cyprus National Committee on Environment and Child Health created a short PSA for citizens about children and wireless radiation and how to reduce Wi-Fi exposure.
- Watch the greek version here <https://www.youtube.com/watch?v=996vzcCYCnE>
- Watch the video translated into english here <https://www.youtube.com/watch?v=996vzcCYCnE>

### Scientific presentations:

- 9/2015 News Report Cyprus Mail: [‘Technology harming our children’ MPs say](#)

## Argentina

2016 National law on electromagnetic pollution *proposed*: [The law proposes a regulatory framework](#) to "radio infrastructure with radiant systems, antennas and all installations capable of generating electromagnetic radiation" in order to "ensure the protection of public health" considering "both thermal effects and biological." In education and health facilities only wired connections to data networks and Internet access may be used. [Translated Article](#). [Original text](#):

## Taiwan

In 2015 the government *Updated their* Protection of Children and Youths Welfare and Rights Act to ban cell phones for young children. [Read it here](#).

- Complete ban on children under the age of two from using electronic devices such as iPads, televisions and smartphones.
- Parents can be fined NT\$50,000 (about \$1600 US Dollars)
- The new law also states that parents must ensure that under-18s only use electronic products for a 'reasonable' length of time.
- Read a news article: Daily Mail- [Taiwan makes it ILLEGAL for parents to let children under two use electronic gadgets... and under-18s must limit use to 'reasonable' lengths](#)

## Namibia

Namibia's atomic energy review report states that current so called "safety" standards DO NOT protect citizens from long term health effects.

- "ICNIRP guidelines do not guarantee adequate protection against the long term effects of exposure, such as increased risk of cancer." -Republic of Namibia:Atomic Energy Board: [The Atomic Energy Review](#)

# Turkey

The Ministry of Health has issued public information brochures that recommend limiting exposure especially for pregnant women and children. In addition the Ministry is developing regulation on prohibiting phone use for children. The EMF in schools is monitored and the public can get measurements on EMF levels from cell towers and schools at a national site.

- [See the Ministry of Health Brochure Mobile Phones and Health Effects](#): The Brochure starts by saying the research on cell phone radiation shows low levels of electromagnetic frequencies “may cause cancer”. 13 Recommendations to Reduce Exposure *which include*: Pregnant women and children (under 16) are more vulnerable and they should use the phone only when necessary, Prefer speaker or headset, Decrease time on phones, Use low SAR phone, Keep phone away from the body, Keep phones out of baby and children’s bedroom, Turn phone off when you sleep or keep it one meter away from bedside, using phones in cars increases your EMF exposure so it is not recommended.
- **Education on Safer Phone Use:** [A Project funded by Ministry of Internal Affairs](#), accomplished by Temkoder (Prevention, Measurement of Electromagnetic Pollution and Training Organization) resulted in secondary school student training in the safer usage of cellular phones.
- **Development of regulations prohibiting children’s cell phone use.** In 2014, the Ministry of Health started working on new regulations to prohibit cellphone usage for children under 14 year-old children. ([See Turkey’s 2014 World Health Organization EMF Report here](#)). However by 2016 the regulation was weakened and in the [2016 WHO EMF Report](#) Turkey states that they are developing regulations that only would pertain to children under 7 years old.
- The Ministry of Communications and Maritime Affairs monitors Electromagnetic fields around the schools and homes. See the website here <http://ema-olcum.btk.gov.tr/>.

# Greece

**Greek law mandates lower RF exposures near schools, nurseries and hospitals:** The exposure limits in Greece are the 70% of the official European limits. In areas less than 300 m from schools, hospitals and nurseries the exposure limit is lower at 60% of the official European limits. Cell antennae are prohibited from being on top of schools and nurseries.

**2012: The Greek government website materials recommend reducing cell phone radiation to children under 16 and they inform citizens of non-ionizing radiation power levels in their community.**

- [The National Observatory of Electromagnetic Fields](#) which is an interactive web portal linked to a network of 500 fixed measurement stations throughout Greece that continuously monitor the EMF levels from all kinds of antenna stations in the frequency range 100 kHz – 7 GHz.
- ELF and EMF Site Measurements can be looked up for various locations at [EEAE](#).
- The Greek government funds research as detailed on the [WHO EMF report here](#).
- The Q and A on RF radiation states the following text about children. [Read it here on page 32 and 33](#)

*“Even though it hasn’t been proven conclusively that children are more sensitive/reactive than adults to exposure to radiation, nevertheless, the direct/pointed recommendation of international organizations is*

*that children be discouraged from [literally translated, learn not to trust] using cell phones. The above statement is supported by the following:*

- 1. Up to about the age of 16, the nervous system of the human body is in the process of development. Consequently, it's totally possible (although not conclusively proven by relevant scientific research) that up until this age, human being are more sensitive to any number of factors/elements/determinants.*
- 2. Younger people have more years ahead of them than older persons during which the long –term effects of mobile phones can be manifested.*
- 3. Environmental factors/elements have a greater general impact on the health of children than on the health of adults.”*

## Chile

**2012, Law No 20.599, The Antennae Law** ‘Regulates the installation of antennas used for the emission and transmission of telecommunications services’ This law limits the power of antennas, reduces urban impact of towers through ‘infrastructure sharing’ opens up a process for citizen participation in the approval or denial process, establishes mitigation measures in areas that are saturated with antennas and prohibits towers near “sensitive areas” institutions serving children, the elderly and medically compromised.

### **Cell antennae/towers are prohibited in “sensitive areas”.**

- Sensitive areas are those areas that demand special protection due to the presence of educational institutions, nurseries, kindergartens, hospitals, clinics, nursing homes or other institutions of similar nature. .
- Read [New communications antenna law in Chile in the International Bar Association Legal Practice Division Newsletter](#) for details on the Law. [Read a Press release with summary.](#)
- Read RCRWireless article [Chilean telecom companies need to comply with new antenna law](#)
- Chile’s Minister of Transportation and Telecommunications Pedro Pablo Errazuriz stated, “...in addition to protecting the urban landscape and the goodwill of the neighborhoods, the new law takes care of the most important: the health of people in a precautionary manner as recommended by the World Health Organization, setting strict limits on the powers of the antennas. Chile is setting standards in this regard.”

## Ireland

The Irish Department of the Environment, Community and Local Government has a webpage on Electromagnetic fields which directs people to the advice of the Chief Medical Officer.

“Advice from the Chief Medical Officer on mobile phone use: We may not truly understand the health affects of mobile phones for many years. However, research does show that using mobile phones affects brain activity. There is general consensus that children are more vulnerable to radiation from mobile phones than adults. Therefore the sensible thing to do is to adopt a precautionary approach rather than wait to have the risks confirmed.

In the light of these findings, the Chief Medical Officer of the Department of Health and Children strongly advises that children and young people who do use mobile phones, should be encouraged to use mobile phones for “essential purposes only” All calls should be kept short as talking for long periods prolongs exposure to radiofrequency electromagnetic fields.

All mobile phone users can reduce their exposure to radiofrequency energy by making fewer calls, reducing the length of calls, sending text messages instead of calling, using cell phones only when landline phones are unavailable, using a wired “hands free” device so that the phone need not be held against the head and refraining from keeping an active phone clipped to the belt or in the pocket”.

[Read the Advice of the Chief Medical Officer of Ireland.](#)

### **Irish Doctors Environmental Association**

The Irish Doctors Environmental Association wrote a statement in 2013 concerning health concerns with Wi-Fi in school:

“We urge you to use wired technologies for your own safety and that of your pupils and staff.” [Read the 2013 Letter](#)

## **Denmark**

Denmark Board of Health states: “As a precautionary measure, the Board of Health recommends a series of simple steps you should follow to reduce exposure from [mobile phones](#) :

- Use the headset or handsfree with earbud, conversation, or use the speakerphone feature
- When possible, use text instead of call
- Limit the duration of calls
- Did not sleep with the phone close to the head
- Limit conversations during low reception and while in transport.
- Do not cover the phone with aluminum foil, special covers, etc.
- Compare phones' SAR value. Lower SAR require less exposure
- [Denmark Board of Health Recommendations on Reducing Cell Phone Radiation](#)

## **Tanzania**

*2014: Director General of Tanzania Atomic Energy Commission (TAEC), Mr Idy Mkilaha publicly endorses precaution.*

*"Mr Mkilaha says that when weighing up this convenient tool with the questionable health impact control, caution and measures must be taken to reduce one's exposure from radio frequency (RF) emissions from the cell phone to prevent health hazards."*

*"According to TAEC, we should use hands-free devices or wireless headset to increase the distance between the phone and our heads. This is the best approach because it creates distance between us and the radiating phone..."*

*We should also keep phone away from us when dialling. Phones use more radiation during connection time, says TAEC."*

Read News Report: [Tanzania: We Should Manage Our Cell Phones Properly Otherwise..](#)

Read Tanzania Daily News: [Tanzania: Need to Protect Oneself When Using Cell Phone](#)

[Read the Tanzania Commission for Science and Technology Newsletter detailing how to reduce cell phone exposure \(page 11\)](#)

After complaints were raised by residents about health effects the Commission co-authored a published paper that reviews national RF level profiles of the radiation emitted from base stations. Read [Review on Measured and Calculated Radio Frequency Radiation Emission From The Base Stations](#) which states that

*In 2016, [Director General of Tanzania Atomic Energy Commission \(TAEC\), Mr Idy Mkilaha died under investigated circumstances](#) and at this time EHT is unable to find the Reports or official warnings as mentioned in the news reports on the current [Atomic Commission](#) webpage.*

## Ireland

### Irish Doctors Environmental Association

The Irish Doctors Environmental Association wrote a statement in 2013 concerning health concerns with Wi-Fi in school:

*"We urge you to use wired technologies for your own safety and that of your pupils and staff."* [Read the 2013 Letter](#)

## United States

Legislation has been introduced at the state and national level. Some Communities have issued proclamations, resolutions and started initiatives to inform the public of wireless health issues.

### CELL PHONE AND WIRELESS LABELING

**2014 California, Berkeley:** [May 12, 2015 Berkeley Adopted the Cell Phone "Right to Know" Ordinance on a Unanimous Vote](#). Berkeley is the first city in the nation to require cell phone retailers to provide those who purchase a new phone an informational fact sheet which informs buyers to read the user manual to learn the cell phone's minimum separation distance from the body. The text states:

"The City of Berkeley requires that you be provided the following notice:

To assure safety, the Federal Government requires that cell phones meet radio frequency (RF) exposure guidelines. If you carry or use your phone in a pants or shirt pocket or tucked into a bra when the phone is ON and connected to a wireless network, you may exceed the federal guidelines

for exposure to RF radiation. Refer to the instructions in your phone or user manual for information about how to use your phone safely." [Full text here](#).

Watch [a video of the historic vote](#) featuring Harvard Law professor Lawrence Lessig.

Watch [a video of testimony to Berkeley](#) from November 8, 2011 on the need for cell phone guidelines.

Watch a video of the [September 2016 Federal Appeals Court Hearing oral arguments CTIA vs. Berkeley as the CTIA tries to strike down the Ordinance](#). This is the hearing considering whether to overturn the district court's decision that denied the CTIA's request for an injunction to block Berkeley's cellphone ordinance.

**2014 New York:** [Wireless Router Labeling in all Suffolk Public buildings](#): 12/2014 The Suffolk County Legislature passed legislation to require all county buildings to post notices that wireless routers are in use such as, "Notice: Wireless technology in use." The resolution, sponsored by Legis. William Spencer (a physician), warns that every wireless device emits radio frequency radiation or microwave radiation. It notes that studies "that have looked at the effects of low-level RFR radiation on human cells and DNA have been inconclusive." [Read Press Release](#).

**2011 San Francisco, California: A *Passed*** 2011 Ordinance by the City of San Francisco required cell phone retailers to distribute an educational sheet created by the San Francisco Department of Environment that explains radiofrequency emissions from cell phones and details how consumers can minimize their exposure. However implementation was blocked after a [three year court battle](#). [The CTIA sued the city](#) and settled with the City to block implementation of the Ordinance in exchange for a waiver of attorney's fees. Although implementation was halted, the [City Cell Phone Radiation Webpage](#) remains online.

SEE A FULL LIST OF PUBLIC AND PRIVATE SCHOOLS THAT REMOVED WI-FI LATER IN DOCUMENT

## **HEALTH ADVICE TO THE PUBLIC**

### **2016: American Academy of Pediatrics Issues Recommendations to Reduce Exposure**

The AAP has updated their [Healthy Children Webpage on Cell Phones](#) entitled *Cell Phone Radiation & Children's Health: What Parents Need to Know*. The webpage reiterated children's unique vulnerability to cell phone radiation stating, “Another problem is that the cell phone radiation test used by the FCC is based on the devices' possible effect on large adults—not children. Children's skulls are thinner and can absorb more radiation.” The AAP issued the following cell phone safety tips specifically to reduce exposure to wireless radiation:

- Use text messaging when possible, and use cell phones in speaker mode or with the use of hands-free kits.
- When talking on the cell phone, try holding it an inch or more away from your head.

- Make only short or essential calls on cell phones.
- Avoid carrying your phone against the body like in a pocket, sock, or bra. Cell phone manufacturers can't guarantee that the amount of radiation you're absorbing will be at a safe level.
- Do not talk on the phone or text while driving. This increases the risk of automobile crashes.
- Exercise caution when using a phone or texting while walking or performing other activities. "Distracted walking" injuries are also on the rise.
- If you plan to watch a movie on your device, download it first, then switch to airplane mode while you watch in order to avoid unnecessary radiation exposure.
- Keep an eye on your signal strength (i.e. how many bars you have). The weaker your cell signal, the harder your phone has to work and the more radiation it gives off. It's better to wait until you have a stronger signal before using your device.
- Avoid making calls in cars, elevators, trains, and buses. The cell phone works harder to get a signal through metal, so the power level increases.
- Remember that cell phones are not toys or teething items.
- [Press Release: The AAP responds to study showing link between cell phone radiation, tumors in rats May 27, 2016](#)

#### [2015 AAP Healthy Child Web Page on Electromagnetic Fields: A Hazard to Your Health?](#)

This webpage states:

"Cell Phones: In recent years, concern has increased about exposure to radio frequency electromagnetic radiation emitted from cell phones and phone station antennae. An Egyptian study confirmed concerns that living nearby mobile phone base stations increased the risk for developing: *Headaches, Memory problems, Dizziness, Depression, Sleep problems*

Short-term exposure to these fields in experimental studies have not always shown negative effects, but this does not rule out cumulative damage from these fields, so larger studies over longer periods are needed to help understand who is at risk. In large studies, an association has been observed between symptoms and exposure to these fields in the everyday environment."

[2013 AAP Letter to FCC Commissioner Mignon Clyburn and FDA Commissioner Margaret Hamburg calling for a review of RF guidelines 8/29/2013](#)

[Time Magazine \(2012\): Pediatricians Say Cell Phone Radiation Standards Need Another Look](#)

**2012, the AAP published Pediatric Environmental Health, Textbook of Children's Environmental Health 3rd Edition edited by Philip J. Landrigan, Ruth A. Etzel. Chapter 41: Electromagnetic Fields. [Read it on Google Books Chapter 41: Electromagnetic Fields at this link page 383.](#) [Oxford Medicine Chapter 41 Link](#)**

AAP News 2011: [More study needed on risk of brain tumors from cell phone use by Ruth A. Etzel, AAP News, Oct 2011](#)

**The California Medical Association, USA**

The California Medical Association (CMA) passed a Wireless Resolution in 2014 that states :

“Whereas scientists are increasingly identifying EMF from wireless devices as a new form of environmental pollution ...

Whereas peer reviewed research has demonstrated adverse biological effects of wireless EMF including single and double stranded DNA breaks, creation of reactive oxygen species, immune dysfunction, cognitive processing effects, stress protein synthesis in the brain, altered brain development, sleep and memory disturbances, ADHD, abnormal behavior, sperm dysfunction, and brain tumors; and...Resolved, That CMA support efforts to implement new safety exposure limits for wireless devices to levels that do not cause human or environmental harm based on scientific research.” [Read the full CMA Resolution here.](#)

[Read a the Santa Clara Medical Bulletin article by Dr. Cindy Russell that explains the CMA resolution and gives recommendations for schools.](#)

**2014: The Connecticut Department of Public Health has issued specific recommendations to reduce exposure to cellphone radiation.** It is notable that the Department has provided information more in depth than the CDC, EPA and FDA in detailing 7 steps on *how* people can reduce exposure. Furthermore, the Department states *“It is wise to reduce your exposure to radiofrequency energy from cell phones whenever possible.”* [Read the Connecticut Department of Public Health Cell Phone Q and A about Cell phones here.](#)

#### **2016: Massachusetts Department of Health: Minimizing Exposure to RF**

“Below are common recommendations and include those for both cell phone and non-cell phone sources:

- Use wired communication devices instead of wireless devices
- Limit children’s use of cell phones except for emergencies
- Keep cell phones and other sources at a distance
- If using wireless devices like computers, laptops, tablets, and printers, place the wireless router away from where children and adults usually spend time.

[Read these recommendations from the Department of Health in full at this link.](#)

**2014 Maryland, Greenbelt:** [The Greenbelt Maryland City Council voted unanimously on November 24, 2014](#) to do the following:

1. Alert citizens about the fine print warnings and possible health risks of cell phones and wireless devices By sharing the Environmental Health Trusts 10 Steps to Safe Tech and Doctors Advice on Cell Phones Brochure in City health fairs and city centers.
2. To send the FCC Chairman a letter urging the adoption of “radiation standards that will protect human health and safety.” [Download the letter here.](#)

3. To oppose cell towers on school grounds and write a letter to the local school board and County Executive.

**2011 San Francisco, California:** [Cell Phone Radiation \(How to Reduce Exposures\)](#) Webpage launched with public information on [how to reduce exposures](#) to cell phone radiation. San Francisco developed the following public health information resources:

- Answers on [How to reduce exposures](#) to cell phone radiation.
- A [Poster](#) on Cell Phones and RF Radiation
- A [Factsheet](#) for the Public
- [Display stickers](#) for Cell Phone packaging.

**2012 Wyoming: Jackson Hole** issued a [Proclamation of Cell Phone Awareness](#) which cites concern over long term health effects as well as the increased risk that the radiation poses to children.

**2012 Florida: Pembroke Pines**, passed Resolution [3362](#) expressing the City's "Urgent Concerns" about Wireless Radiation and Health and which encourages citizens to read their manuals and presents information on how to reduce exposure by using a headset or speakerphone. Jimmy Gonzalez, an attorney who had developed brain cancer after heavy cell use, initially petitioned the Commission. [Watch the Video of his powerful testimony here.](#)

**2010 California, San Francisco:** [Cell Phone Radiation \(How to Reduce Exposures\)](#) Webpage launched. Answers on [how to reduce exposures](#) to cell phone radiation. The City developed a poster, factsheets and display stickers with public health information.

**2010 California: Burlingame California City Council** voted to include cell phone safety [guidelines](#) in their Healthy Living in Burlingame initiative (WHO classification and consumer precautions).

**2010 Maine, Portland :** Mayor Mavodenes, Jr. declared October "Cell Phone Awareness Month"

**Colorado 2009** The Governor of Colorado issued a Proclamation on Electrical Hypersensitivity.

*"Electromagnetic Sensitivity is a painful chronic illness of hypersensitive reactions to electromagnetic radiations.*

*WHEREAS, the symptoms of EMS include, dermal changes, acute numbness and tingling, dermatitis, flashing, headaches, arrhythmia, muscular weakness, tinnitus, malaise, gastric problems, nausea, visual disturbances, severe neurological, respiratory, speech problems, and numerous other physiological symptoms.*

*WHEREAS, Electromagnetic Sensitivity is recognized by the Americans with Disabilities Act, the US Access Board and numerous commissions;" [Read the Proclamation HERE.](#)*

**May 2009** The Governor of Connecticut issued a Proclamation on Electrical Hypersensitivity.

*"WHEREAS, the health of the general population is at risk from electromagnetic exposures that can lead to illness indicted by electromagnetic radiations; and, WHEREAS, this illness may be preventable through*

*the reduction or avoidance of electromagnetic radiations, in both outdoor and indoor environments and by conducting further scientific research; and, " [Read the Proclamation HERE.](#)*

**Broward County Florida May 2009, The Mayor issued a Proclamation on Electrical Hypersensitivity.**

*"WHEREAS, as a result of global electromagnetic pollution, people of all ages in Broward County and throughout the world have developed an illness known as Electromagnetic Sensitivity; and, "*

[Read it all HERE.](#)

## US Proposed Legislation

**2012 National Law** [The Cell Phone Right to Know Act H.R. 6358](#) was introduced receiving strong support from many organizations including the American Academy of Pediatrics. (AAP Letter [here.](#)) This legislation called for labels on mobile devices at point of sale, a comprehensive national research program to study whether exposure to wireless devices causes adverse biological effects directed by NIEHS and the EPA and exposure level regulation.

HR 6358 received strong support from the American Academy of Pediatrics Read the AAP Letter [here.](#)

Congressional hearings in 2009 provided expert testimony to Congress. [Watch CSPAN VIDEO.](#)

**Library of Congress Summary:** Written by the Congressional Research Service

Cell Phone Right to Know Act - Requires the Director of the National Institute of Environmental Health Sciences and the Administrator of the Environmental Protection Agency (EPA) to:

1. conduct or support a comprehensive research program to determine whether exposure to electromagnetic fields from mobile communication devices causes adverse biological effects in humans, including vulnerable subpopulations such as children, pregnant women, those with compromised immune systems and hypersensitivity reactions, men and women of reproductive age, and the elderly;
2. disseminate research results to the general public; and
3. report findings and conclusions to Congress.

Directives:

- Directs the Federal Communications Commission (FCC) to promulgate regulations to allow a subscriber to access personally or to give consent to allow researchers with institutional review board approval to access specific usage data required to investigate the link between electromagnetic radiation exposure and potential adverse biological effects in humans.
- Directs the EPA to promulgate regulations establishing maximum exposure level goals and maximum exposure levels for exposure to electromagnetic fields generated by mobile communication devices.
- Directs the Commissioner of Food and Drugs (FDA) to promulgate regulations to provide for labeling (including exposure ratings and the maximum allowable exposure levels and goals) on mobile communication devices, packaging, instruction manuals, and at points of sale in stores and on websites.

- Requires the Secretary of Health and Human Services (HHS) to increase: (1) the number and size of grants to institutions for training scientists in the field of examining the relationship between electromagnetic fields and human health; and (2) the number of career development awards for such training for health professionals pursuing careers in pediatric basic and clinical research, including pediatric pharmacological research.

Amends the Public Health Service Act to establish a graduate educational loan repayment program and authorize national awards for researchers in such fields.

Amends the Communications Act of 1934 with respect to the prohibition on state or local government zoning regulation of personal wireless service facilities on the basis of the environmental effects of radiofrequency emissions. Excludes from such prohibition state or local regulation based on the adverse human health effects of emissions of radiofrequency electromagnetic fields.

**2015 NEW Massachusetts** proposed MA [Senate Bill 1222](#): An Act creating a special commission to study the health impacts of electromagnetic fields and [Bill H2007](#): An Act relative to a special commission to study electric and magnetic fields. *Bills Still in Process as of August, 2015.* [Watch a view of the statehouse briefing on RF here.](#)

**2015 Nassau County will have a proposed Wireless Router Labeling Act** that would place visible warning signs in all county buildings and facilities where a wireless router is located.. [Please read recent coverage of the initiative here.](#)

2014 [The Maine LD 1013 "The Wireless Information Act"](#) passed the State Senate and House but then failed to pass the second vote. The Bill requires manufacturer's information on radio-frequency exposure be visible on the outside of the cell phone's product packaging.

- [Please a video of State Representative Andrea Boland on how the legislation was thwarted.](#)
- [Read Maine's "Cellular Telephone Labeling Act" -April 17, 2015](#)
- [Read Cell Phone Radiation Label Bill Passes Maine Legislature Before Dying](#)

The [San Francisco Cell Phone Right to Know Ordinance](#) was signed in 2011 requiring cell phone retailers to distribute an educational sheet created by the San Francisco Department of Environment that explains radiofrequency emissions from cell phones and how consumers can minimize their exposure. The CTIA sued the city and settled with the City to block implementation of the Ordinance in exchange for a waiver of attorneys' fees. The City [Cell Phone Radiation Webpage](#) remains online.

**2015 Oregon HB 3350: This proposed legislation** directs the Department of Education to prepare statement that discloses potential health risks of wireless technology and requires public and private schools to distribute statement to employees and parents of students. It declares an emergency effective July 1, 2015. [Read the Bill here.](#)

**2015 Oregon HB 3351:** This proposed legislation states that cell phones must have a visible written label that advises consumers of possible risks and steps that consumers can take to reduce the risk of radio-frequency radiation exposure from cellular telephone use. [Read it here.](#)

**2014 [Hawaii Senate Bill SB 2571](#)** was introduced calling for a warning label encouraging consumers to follow the enclosed product safety guidelines to reduce exposure to radiation that may be hazardous to their health.

**[SB 932 California](#):** This 2011 legislation would have required retailers to include notices on product packaging that cell phones emit radio frequency (RF) energy. A second notice would be posted at the point of sale when purchasing online or in a physical store.

**[HM 32, New Mexico](#):** This 2011 proposed law request the Department of Health and the Department of Environment to study and review all available literature and reports on the effects of cell phone radiation on human health.

**[HB 1408 Pennsylvania](#):** This 2011 proposed law would require warning labels on cell phones “to inform all citizens about possible health dangers that have been linked to microwave radiation that is emitted by cellular telephones and the steps that can be taken to mitigate those dangers, especially as they relate to children and pregnant women.”

- Dr. Ronald B. Herberman, former director of the University of Pittsburgh Cancer Institute (UPCI) and the UPMC Cancer Center offered testimony at a PA House Democratic Policy Committee hearing. CBS Local coverage of hearing [HERE](#). Philadelphia Tribune News coverage [Here](#).

**[SB 679 Oregon](#):** This 2011 proposed law would require warning labels for all new cell phones and cell phone packaging. [Watch a news video about the law here](#).

**[H.R. 2835](#)** In 1999 Congressman Bernie Sanders sponsored [H.R. 2835 \(106th\): To require an assessment of research on effects of radio frequency emissions on human health](#).

(Note: This document does not cover ALL EMF policy but is simply a sampling. Please feel free to contact EHT to send documentation of other policy actions. )

## Schools Worldwide Removing the WiFi/Taking Action

**2016: Haifa, Israel:** Haifa Mayor Yona Yahav( of Israel’s 3rd largest city) ordered all schools to have wireless removed and replaced with wired connections. [Read Krayot article](#). [Hamodia article](#). Related [Reshet TV Report](#) [Watch News Report with unofficial English translation](#) [Watch News Report on Supreme Court Case in Israel](#)

**2016 Lowell School, Washington DC:** In the kindergarten wing, the Wi-Fi hotspots were removed and the teachers are given ethernet and adapters so that computers and class technology can be ethernet connected (corded) to reduce RF-EMF exposure.

**2016 Italy:** Turin Mayor Chiara Appendino laid out plans “to cut back on Wi-Fi in state schools and government buildings over concerns that radiation might damage people's health”.

Read 7/2016 News Report [Turin could slash Wi-Fi over 'radiation' concerns](#)

**2016: Onteora School District in New York State USA:** District adopts "Best Practices with Wi-Fi [Read the April 20, 2016 Meeting Minutes Page 2.](#) "Turn off the device when not in use and at the end of each day. If device is to stay on, turn Wi-Fi off when not in use. Always place device on a solid surface. Viewing distance should be a minimum of 12 inches from the screen. Staff was asked by the Principals to post this in areas that contain computers and devices. They are reminding staff to follow it."

**2016 Italy:** [Mayor of Borgofranco d'Ivrea \(Italy\) orders Wi-Fi to be turned off in schools.](#) "Mayor Livio Tola told the town's high school and elementary school to return to using cables to connect to the internet after reading that the electromagnetic waves given off by wireless routers were especially harmful to young children." [Read the newspaper article here.](#) [Read the News article here "Ivrea, The Mayor Removes WiFi as it Could Be Dangerous".](#)

**2016: Rotokawa School New Zealand, implemented steps to minimize RF Exposure** Children use ipads in flight mode on desk and parents may request that their child use an Ethernet cord. Children are taught about the health precautions as part of their cyber citizenship.

**2016: Istituto Comprensivo Alighieri- Diaz in Lecce Italy** has banned wifi. Their two resolutions decided: a) to ban wifi in school and install a wired system for the use of internet and b) Reject the request of the local government (Municipality) to install an antenna on the school roof for the wireless signal providing for the "Wireless city" program. The resolution also asks the Municipality to install the antenna at a reasonable distance from school. [Read the official resolutions number 1 here](#) and [Resolution 2 Here.](#)

**2016: The Piemonte Region has adopted a resolution to limit EMF exposure, to limit the use of wifi in schools** and be considerate to the problem of EHS people. [Read about it here.](#)

2015: [Ashland Public Schools, Mass \(USA\):](#) "Best Practices" to turn the WiFi off when not in use, [Download Slides.](#) [Video of parent who initiated this.](#) [Video of school board member](#) discussing the process. [Read Magazine article on Ashland's Decision Here.](#)

2016: [Shearwater The Mullumbimby Steiner School](#), Australia, 100% Wi-Fi Free School

2016: [Yallingup Steiner School](#) Australia , WiFi Free Classrooms

2016: Linuwel School , Australia ,WiFi in some classrooms, Can accommodate children with EHS.

2016: Cairns Hinterland Steiner School , Australia, WiFi Free Classrooms (may be available in other areas)

2016: Wild Cherry School, Australia , 100% Wi-Fi Free

2015: St. Cajetan School, Belgium: Wired Internet installed and wireless removed.

2015: Washington Waldorf School, Maryland, USA: Removed Wi-Fi Routers from Buildings, Ethernet installed.

2015: Freshwater Creek School, Australia, 100% Wi-Fi Free

2015: Lorien Novalis School, Australia, 100% Wi-Fi Free School Preschool to 12th grade.

2015: Cairns Hinterland School, Australia, WiFi Free Classrooms for EHS

2014: Acorn Hill School, Maryland: Wi-Fi Networks removed.

2014: Friends Community School: Wi-Fi turned off in wing for lower elementary school students. WiFi routers moved OUT of classrooms into hallways for older grades to reduce EMF exposure. Ethernet wires made available in classrooms for families who want children on corded (not wireless) computers.

2014: [DearCroft Montessori](#): Hardwired internet to younger grades, limited Wi-Fi Router exposure to older grades.

2014: [Portland Waldorf School](#), Portland Oregon, USA, WiFi removed.

2014: [Meeting House Montessori](#), Braintree Massachusetts, USA, WiFi replaced with ethernet.

2014: Ghent, Finland, [Wi-fi banned from pre-schools and day care](#).

2014: [UPPER Sturt Primary School](#), Australia. [Read article](#). [Read "No WIFI" LOW EMF School Policy](#).

2014: The [St. Augustine School](#) in Italy turned off Wifi and goes back to Wires.

2013 [Winlaw Elementary School](#), B.C. Canada turned off WiFi.

2013 [Te Horo Primary School](#) New Zealand Replaced WIFI with cable-based internet.

2013 [Kootenay Lakes District](#) School Board BC (One school without Wi-Fi)

2013 [Blaise-Cendrars High School](#), Switzerland. Teachers vote to remove WiFi.

2012 [Kivioja primary school](#) in Ylivieska Finland bans phones and minimizes Wireless.

2012: [Halton Waldorf, in Burlington](#) Vermont: Remaining free of Wireless Radiation

2011 [City of Lakes Waldorf School](#), WiFi taken out. Minneapolis, Minnesota USA

2011 Aurora School in Ontario removed Wifi and replaced with hardwired.

2011 [North Cariboo Christian School](#) in Quesnel, B.C., removed Wi-fi .

2011 [Pretty River Academy](#) in Ontario no WiFi.

2011 Wayside Academy, Peterborough, Ontario no Wi Fi.

2010 Surrey, [BC Roots and Wings Montessori](#) removed Wi-Fi.

2010 Ontario St. Vincent Euphrasia elementary school: Parents voted to turn off Wi-Fi.

2009 HEROUVILLE-SAINT-CLAIR wi-fi networks removed.

## Teacher Unions and Parent Teacher Organizations

**2016:** [New Jersey Education Association \(NJEA\)](#) publishes [“Minimize health risks from electronic devices”](#) in the September 2016 NJEA Review. *Adrienne Markowitz and Eileen Senn detail how to reduce physical health risks from devices including risks from radiation exposure*

- *“Keep devices away from the body and bedroom.*
- *Carry phones in briefcases, etc., not on the body.*
- *Put devices on desks, not laps.*
- *Hard wire all devices that connect to the internet.*
- *Hard wire all fixed devices such as printers, projectors and boards.*
- *Use hard-wired phones instead of cell or cordless phones.*
- *Text rather than call.*
- *Keep conversations short or talk in person.*
- *Put devices in airplane mode, which suspends EMF transmission by the device, thereby disabling Bluetooth, GPS, phone calls, and WiFi.*
- *Use speaker phone or ear buds instead of holding the phone next your head.*
- *Take off Bluetooth devices when not using them.”*

### **2016: Phoenicia Elementary School Onteora School District, New York State**

- The PTA wrote a letter to the Onteora School District calling for the Wi-Fi to be turned off as a precautionary action . [Watch a video of the School Board Meetings where letter is read here.](#) [Watch videos of parents and students calling for Wi-Fi removal here.](#)
- Read News Report: [Some Onteora parents fear Wi-Fi signals in schools are harming their children.](#)

### **2016: Ontario Secondary School Teachers Federation**

- A new call for a moratorium on WIFI and in the Limestone School District and they have taken the issue to the school trustees in that District. “The Teacher Union’s president says there is a growing mountain of evidence that WIFI can pose health risks.” Andrea Loken/OSSTF District President stated in a 3/2016 news interview that, “There are thousands of published peer reviewed papers that are indicating adverse health effects from WIFI and we are seeing an increased awareness around this issue worldwide.” Watch [the video of the news piece with Union members here](#) . [Read the National Post article here.](#) [Radio Canada International article here.](#)

### **2016: Elementary Teachers Federation of Ontario**

- A 3/2016 News Report states that they are calling for a “WIFI moratorium until further health studies are done, and lawmakers can catch up with new regulations.” Watch [the video of the news piece with Union members here](#) . [Read the National Post article here.](#) [Radio Canada International article here.](#)

### **2014 United Federation of Teachers (Teachers, nurses and professionals working in New York City).**

- In 2014 their [Wireless Radiation Webpage stated](#) “Wireless radiation is emitted by the myriad of wireless devices we encounter every day. It was once thought to be relatively harmless.

However, we now know that wireless radiation can cause non-thermal biological effects as well, including damage to cells and DNA, even at low levels. Curiously in March of 2016, this statement was removed and replaced with new text mimicking FCC verbiage. However the site *still posts* how to reduce exposure.

- Resources posted on their site include Dr. Moskowitz' [Reducing Your Exposure to Wireless Radiation](#) and the BabySafe Project brochure [What You Need to Know About Wireless Radiation and Your Baby](#). "Taking certain precautions around wireless radiation is appropriate for our most vulnerable populations, including pregnant women."

**2014 New York State Teachers Union NYSUT:** A federation of more than 1,200 local unions.

- "We have enough evidence to justify taking action and we are not willing to wait until our members, their children and the students suffer health consequences from not doing anything," - Paul Pecorale, Vice President of the New York State United Teachers Union.
- [Read the Press Release on Best Practices For Schools prepared for NYSUT](#)
- Download the [Guidelines for Safer Use of Wireless Technology in Classrooms](#) Published for NYSUT
- NYSUT hosted a [Webinar: Risks of wireless technologies and protecting children and staff in schools](#).

**2014 National Education Association**

"The National Education Association believes that all educational facilities must have healthy indoor air quality, be smoke-free, be safe from environmental and chemical hazards, *and be safe from hazardous electromagnetic fields*."

"Students and/or their parents/guardians, education employees, and the public should be notified of actual *and potential hazards*."

"School districts should conduct periodic testing for harmful water *and airborne particles/agents* that are detrimental to the health of students and education employees and shall report the results publicly."

"The Association also believes in the development and enforcement of health and safety standards specifically for children." [Read Section C-19 of the NEA 2013-2014 Resolutions](#)

**[2013 Canadian Teacher Federation's Brief](#) (200,000 elementary and secondary school teachers)**

- "CTF is concerned about the lack of definitive research regarding the adverse health effects of Wi-Fi.
- "We propose a prudent approach to the use of Wi-Fi, especially where children are present."
- "We recommend an education program regarding the relative safety of Wi-Fi exposure and that appropriate resources be developed to educate the public regarding ways to avoid potential exposure risks of Wi-Fi access points and devices."
- "Pedagogical needs could be met in schools with an approach that limits exposure to Wi-Fi."
- Read the Briefing [The Use of Wi-Fi in Schools - Briefing Document](#)

2015: Canadian Teacher's Magazine published [CTF Sounds the Alarm on Wi-Fi](#)

**2013 [United Teachers of Los Angeles](#), representing 40,000 teachers and staff**

- Resolution passed: "I move that UTLA will abide by current National NEA Policy for Environmentally Safe Schools which states that all employees and stakeholders should be informed when there are changes in their exposure to environmental hazards including electromagnetic radiation and that all stakeholders and the public should be notified of any actual and potential hazards. UTLA will advocate for technological solutions that maintain technology upgrades while not increasing employees exposure to electromagnetic radiation."
  - Health and Human Services Committee 3-6-13 #1: Moved by Kevin Mottus, seconded by John Cabrera.
- See UTLA Newsletter [editorial by social worker Kevin Mottus](#).

### **2013 [Elementary Teacher's Federation of Ontario](#) - over 76,000 teachers**

"There is cause for concern for members' health and safety, especially women," said Sandra Wash, a teacher representing the Peel district when the Federation issued [a 2014 position statement](#) supporting an Expert Panel recommendation that Health Canada provide the public with more information about radiofrequency energy, and the safe use of wireless technology. [ETFO voted](#) to:

- Turn cell phones off in classrooms
- Label the location Of Wi-Fi access points.
- Research Radio Frequency radiation.
- Develop a hazard control program related to wireless microwave radiation through JHSC.

### **2012 [The Ontario English Catholic Teachers Association](#) (45,000 Ontario teachers)**

- Recommends a wired infrastructure as WIFI "may present a potential Health and Safety risk or hazard in the workplace...The safety of this technology has not thoroughly been researched and therefore the precautionary principle and prudent avoidance of exposure should be practiced."
- [Read the Position Statement here](#). "Controls for WiFi would best be guided by the ALARA principle (As Low As Reasonably Achievable), as well as by applying the concept of prudent avoidance (of non-ionizing radiation)."
- [Read CBC News article](#)

### **2013 [BC Teachers Federation adopted Wireless Resolutions and Proposed Resolutions](#)**

- ["The BCTF supports members who are suffering from Electromagnetic Hypersensitivity by ensuring their medical needs are accommodated in the workplace."](#)
- Proposed Resolutions "the World Health Organization's classification of radiofrequency/electromagnetic fields emitted by wireless devices as a 2B possible cancer risk to humans; that the BCTF ensures all teachers have the right to work in a safe environment, including the right to work in a Wi-Fi/ wireless-free environment."
- Recommendation to the Ministry of Education that school boards "begin immediate installation of on/off switches for Wi-Fi routers in schools, thereby reducing microwave radiation exposure and reducing health risks to members, and/or provide safer Ethernet cables or fibre optics".  
Read the [Wireless Resolutions and Proposed Resolutions](#)
- Read Daily News Coverage: [Merritt teachers demand protection from wi-fi radiation 'Evidence is piling up that wi-fi radiation may in fact be harmful'](#)
- Read the Vancouver Sun News [Report Here](#).

### **2013 [The BC Confederation of Parent Advisory Councils](#) (BCCPAC) of 821 Advisory Councils representing over 500,000 parents in British Columbia passed two resolutions.**

- Resolution 17 "calls on each Board of Education to have one public school at each education level that is free of Wi-Fi, cordless phones and cell phones. This school will only be equipped with wired computers and wired telephones for personal, educational and administrative purposes."
- Resolution 18 calls on Boards of Education to "cease to install Wi-Fi and other wireless networks in schools where other networking technology is feasible." passed with a clear majority.
- Read Resolution [On/Off switches for WiFi Routers and Protocol for the Use of Wireless Devices](#)

#### **2010 UK VOICE ;The Union for Education Professionals- 20,000 members**

- ["Voice has advocated that new Wi-Fi systems should not be installed in schools, that existing systems should be turned off when not required and that schools should consider whether they really need to use Wi-Fi, which was developed to facilitate Internet access on the move rather than to be used as a convenient alternative to cables in dedicated IT facilities."](#)
- " In the light of what has happened to one of our members [*who has developed sensitivity to electro-magnetic radiation*], I am concerned that so many wireless networks are being installed in school and colleges without any real understanding of the possible long-term consequences."- Voice General Secretary Philip Parkin
- Read their [Position Statement read their Blog post.](#)

#### **Los Angeles California Public Schools**

- The LA School District Uses a RF-EMF Exposure Threshold 10,000 Less Than the FCC Limits: The OEHS supported a precautionary threshold level that is 10,000 times lower than the current Federal Communications Commission standard. Read the RF Report the LA School District Used to recommend a cautionary exposure level. [RADIOFREQUENCY \(RF\) EVALUATION REPORT Use of Wireless Devices in Educational Settings](#)
- 2009 LA School Board Resolution Banning Cell Towers from schools and recommending against Wi-Fi.
  - "The Board supports responsible deployment of fiberoptic broadband technology which is superior to wireless in speed, reliability, security, durability and protections it affords people and the environment from the potential hazards of exposure to radio frequency radiation."
  - Read the adopted resolution [HERE.](#)
  - [Read the Press Release here LOS ANGELES BOARD OF EDUCATION MEMBERS VOTE TO PROHIBIT CELL PHONE TOWERS NEAR SCHOOLS](#)
- 2009 December Resolution *Condemning Cell towers NEAR Schools* as was this T-Mobile Cell Tower across the street from an elementary school. [Read it here.](#)

["As long as questions exist as to the adequacy of these federal regulations, local governments should have the ability to include consideration of health and environmental effects of these facilities."](#) (referring to cell towers) [Read the motion by Supervisors Zev Yaroslavsky and Michael Antonovich](#)

**2000 LA School Board Resolution Opposing Cell Tower Placement on Schools** and calling for precautions with wireless. 'Whereas, Recent studies suggest there is evidence that radio-frequency radiation may produce "health effects" at "very low field" intensities' [Read it here.](#)

#### **2010 Greater Victoria Teachers' Association**

"The GVTA recommends a precautionary approach to the School District with regard to provision of wireless internet in schools. The precautionary approach comes from the environmental movement and

has been adopted as common practice in areas regarding potential environmental, ecological or biodiversity damage. It suggests that the lack of significant evidence is not enough of a reason to be unconcerned. The fact that many other countries have instituted regulations to protect children, seniors, pregnant women and other susceptible populations should be the guide for a District policy on WiFi installation and use in the worksites."

The [GVTA Wireless in Schools Webpage](#) states now that:

- Wi-Fi free zones should be available.
- On/Off routers recommended and record any adverse Wi-Fi health effects.
- Minimal or non-use within elementary schools.

**2008** Lucerne Elementary Secondary Arrow Lakes District SD 10 New Denver BC, Canada Opts for "No WIFI

#### **2001 Fletcher Hills PTA Resolution submitted to the California State PTA**

- "RESOLVED, that the California PTA supports local municipal zoning setback rules of at 1000 feet or more from an operating wireless transmitter and a school or residential area; and be it further
- RESOLVED that the California PTA supports encouraging schools to use cable lines for all communications services on campus and to avoid the endorsement, purchase or use of wireless local area network systems on campus; and be it further
- RESOLVED that the California PTA recommend that teachers and students should limit use of cellular phones or other mobile devices on school property to emergencies and that cellular phones, pagers and other mobile phones be turned off and placed out of sight while the individual is on school property"
- Resolution on Wireless Equipment/Cellular Phones and Antennas [Read it here.](#)

## INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS

### DIVISION OF OCCUPATIONAL HEALTH, SAFETY AND MEDICINE

*"The IAFF opposes the use of fire stations as base stations for towers and/or antennas for the conduction of cell phone transmissions until a study with the highest scientific merit and integrity on health effects of exposure to low-intensity RF/MW radiation is conducted and it is proven that such sitings are not hazardous to the health of our members."* \_

The IAFF Official Position Against Cell Towers on Fire stations passed in 2004 [iaff.org/HSFacts/CellTowerFinal.asp](http://iaff.org/HSFacts/CellTowerFinal.asp).

- This Position was initiated after increasing complaints among firefighters with cellular antennas on their stations coupled with the California study showing neurological damage in California firefighters conducted by Dr. Gunnar Heuser. [Read the Press Release on the Resolution and Research Study here](#)

### L.A. County Firefighters Local 1014

- Local 1014 has a webpage dedicated to stopping towers because of a plan to install them on over 200 of their stations. <http://www.stopcellphonetowers.com/index.html>
- "As firefighters and paramedics, we live in these firehouses. What effect will these towers have on us? What are the risks to our neighbors? It's a no-brainer that LA County should at least have

done a proper study before before putting 200-foot high-power microwave antennas on top of our heads."

**- Dave Gillotte, Active Duty Fire Captain**

*President, LA County Firefighters Local 1014*

[Watch him testify on this issue here.](#)

- *The Firefighter's Website in 2015* <http://www.stopcellphonetowers.com/index.html>

**United Firefighters of Los Angeles City Local 112 IAFF-CIO-CLC**

#### **Opposes Cell Towers on Their Stations.**

- "It is inexcusable that once again our firefighters in the field were the last to know about a massive 150 million dollar project that could jeopardize their health and safety. ... nobody talked to us and we have not heard from one single expert who has told us that this project will be safe."
- "UFLAC will strongly oppose the use of Fire Stations as base locations for cell towers and/or antennas"

Download the letter from this [LA Firefighters Union Local 112 asking for an immediate halt to cell towers](#) on fire stations.

[Watch videos the these Firefighter Union Presidents testifying to the LA Board of Supervisors on the Issue here.](#)

**Subject:** A New Paradigm in EMF Science

Please see attached document file.

I am a descendant of an atomic US veteran, former US Army Reserve Combat Electrician and for many more years was a US Navy air traffic controller, and then an FAA air traffic controller, I assure you I am quite sane and recently completed four graduate degrees in aeronautical science including Space Studies, I am an electromagnetic hypersensitive female, diagnosed at age 55 by functional MRI imaging. This condition is a global problem. I have quite a voluminous assortment of supportive documents. Attached is a most recent article written for the engineering sector.

Sincerely,

Rebecca Smith
